	A		was being hewed (recently)			
	U		mazarba			
			was being written (recently)			
			magzuzâ			
			was being delved (recently)			

NOTES:

2 Stem Groups: Ground and Energetic.
Ground: Standard form used for the majority of verbs
Energetic: 2nd Radical is doubled - often indicating an intensive form or iterative (repeated) form.

3 Aspects: The verbs relation toward dependability and time (Perfect and Imperfect).
Perfect: Refers to actions which can be considered as dependable facts. These might be statements about the past, present or even future (dependable future events). Such as: one might find in a chronicle, or statements of general truth (strongly held dependable beliefs).
Imperfect: Refers to actions which can be considered to be evolving or uncertain realities. These statements as a rule concern the present or uncertain future outcome. They may however also concern the past (when referring to uncertain past events - usually in question form).

4 Moods: Imperative and Jussive - Allows speakers to express their attitude toward what they are saying (for example, whether it is intended as a statement of desire, of command, of suggestion, etc.)
Imperative: Commands or orders (addressed to 2nd Person, has both a singular and plural version)
Jussive: Suggestions, Recommendations, Desires or Pleads. It can also apply to orders by their author's wish in the mandative subjunctive, clauses that usually begin with "that" ("that") and express a demand, requirement, request, recommendation or suggestion.
Example: I recommend that… The subtle form with anecdote "uzer" tùi-i is seldom used are more unless in official or over-polite speech.

Infinitive: The uninflected form of a verb is used for verb or subject focus. or as secondary verb to intensify the main verb. Often preceded by the preposition "âz" (to)

Participle: To indicate actions going on (imagined or in-sight) this moment the imperfect would usually be used (For instance: "I am writing (I write)" / "zarzâ"). Not to be confused with gerund form: (the act of) writing] .
There is however a form that is used to clearly and explicitly emphasize the PRESENT state of an action, this is the Present Participle form.
For instance "is NOW being written". This form is not conjugated, and as such always uses "a" as root vowel.

Past participle forms are usually formed in the perfect "He was writing (He wrote)" = "zarzâa".
There is however a form that is used to clearly and explicitly emphasize dependable events that have started in the past yet are still ongoing or have very recently (at the moment of speaking or just before) come to a conclusion.
Like the Present Participle the Past Participle Form always applies a passive voice (was (being) hewed).
When one wishes to convey an active voice (has hewed), one would commonly use the imperfect, seeing the recent event is being vividly imagined.
Unlike the Present Participle Form this form is conjugated, using the endings and root vowel (a/u/e) seen in the Perfect Forms.

Reduced Auxiliary Verbs			
Future		ca-	will/shall (would)
Capable		ku-	can/could
Near Future		ag ca-	will soon/shall soon

PERFECT (DEPENDABLE/FACTUAL)	
Perfect Example	*Perfect Example (Translation)*
tarî zazrebâta	The moon shall shine

* Using the 3rd person singular familiar as an example (yellow letters mark the conjugation of the 3rd person singular familiar) / for convenience the past and present tense been used for the translations of these forms, yet actual translation may differ depending on sentence context and environment.
** Indicates how frequent such verbs are in neo-khuzdul compared to all verb types combined
*** For more info on verb tenses, please refer to verb tenses documentation.

Types of neo-khuzdul verbs

1) There are seven types of neo-khuzdul verbs - 1 Transitive Verb Form and 6 standard forms.
2) The transitive form, known as EAE-Type , uses "A" as first vowel and "u" as second vowel in the perfect form, while it uses "a" in the imperfect.
3) The six standard forms, either use an "a, u or i" pair as first and second vowels in the perfect form, while they use either "i" and "a" in the imperfect.
4) The form structure (CvCvC / CCvC) remains identical in all seven verb types, as does the conjugation, only the base vowels will differ.

Estimated Usage**

uslukh	*TYPE 25*	uslukhu	**sulûkhu***	*dragon of*	*dragons of*
kobor	*TYPE 26*	koboru	kabur	*dragon of*	*dragons of*

** also applies singular rule in plural form*

Singular Rule: *add "u" / exception Type 4 and 17*
Plural rule: *The vowel between mid (first in bi-radical words) and last radical becomes a "u"*
/ in case last vowel of nominative plural is ô, replace with "û" - exception Type 4, 13, 14 and 22
(in these cases the last vowel is already an extended version ("û") in nominative form, hence uses the singular rule in plural form).

Khuzdul is the language of the Dwarves in J.R.R. Tolkien's legendarium set in Middle-earth.
For these Neo-khuzdul documents both the original Tolkien material, David Salo's Neo-Khuzdul and Khuzdul used in Turbine's LoTRO have been used.
This is my personal interpretation of Tolkien's dwarvish language, I do not claim this content to be canon.
This document is an interpretation of Tolkien's work and any Khuzdul related material, all rights are reserved for their proper owners.
Any reference to The Lord of the Rings Online or any other brand name is not meant to claim ownership of material.

DOC: 07 -Usage of negation and affirmation

NEGATIVE

ma	Verb Form "not", expressing a negation of a conjugated verb: "He did not write" ("ma zaraba"). Often seen as formal or antiquated, present day colloquial language uses "lu".
lo	Adjective Form "not", expressing a negative state (example "not fit"). Often seen as formal or antiquated, present day colloquial language uses "lu".
lu	Present day colloquial version of "ma" and "lo". Negates things that are happening or have happened.
lu'	The interjection: "no!"
bin-	without (-less), used for nouns or abstract concepts. Example: mute ("binaglâb" - literally: "without language")
lô?	Verb Confirmation Form, (isn't it?, hasn't he?, didn't she? etc... Are forms of this in English.) Example: He wrote, didn't he? ("lô tazrabi?") Note "lô" is placed before the verb, not after the verb.
mabakh	no, zero or none. The "no" in "there are no axes" would be translated with the word for zero, being "mabakh" (yom barâk mabakh) - literally: "there are axes zero "
nê	Negative particle used with injunctions or other non-real expressions. It negates hypotheticals, things that would happen or might happen or haven't happened yet. (Don't)

POSITIVE

bâ	Verb Form, expressing an affirmation of a verb (in English we often vocally drill down on the verb TO BE, TO HAVE or TO DO, example: "He HAS written/He DID write" ("bâ zaraba")
bir	Adverb of affirmation, expressing a statement is true or affirming a state, can be in response to a question. Example "an axe, of course" ("bir bark") - literally: "clear(ly) axe"
kun	The interjection: "yes!" used to mark a affirmative answer to a positive question (example: do you speak Khuzdul?)
kuna	The interjection: "yes!" used to mark a affirmative answer to a negative question (example: you do not speak Khuzdul?)
"Intensifying Infinitive Absolute"	Verb Confirmation Form, (it is!, he has!, she did! etc... Are forms of this in English.) Example: He wrote, he did! "zaraba d'azrub" - (Literary: "He wrote to write")

DOC: 08 - Khuzdul Numbers:

Order written and spoken as: units-tenfolds-hundreds-thousands-millions-etc.. (similar to Hebrew)

As some cirth runes are identical to the ones used for letters, a dot (.) below the rune will indicate a number - here displayed to the left (due to font).

Unlike Hebrew, Khuzdul does not have male or female forms of a number.

							Written in Cirth* (proper font required)	Notes
					Ordinal Form	Ordinal Form Translation		
0	Mabakh	(the) zero (naught)					.ᛜ	derived from the word "nothing"
1	ze'	(the) one	zu	(the) ones	zê'	(the) first	.ᛁ	
2	nu'	(the) two	nu	(the) twos	nû'	(the) second	.ᚢ

*DOC: 11 - Conjunctive Adverbs**

ENGLISH	***KHUZDUL***
zûrsullu	anyway
rami	besides
khamamakhajmul	for example (for instance)
yothuraktu	further (furthermore)
khamatada	hence
zûrimumul	however
nibakt	in fact
nimakharmul	indeed
nemnâg	instead
nan'kan	likewise
khidadrân	meanwhile
yomaktu	moreover
nîhabkulul	nevertheless
rêlohabkulul	nonetheless
nisullukan	of course
ayanunur	on the contrary (on the other hand)
nunurkan	otherwise
khiduyothur	still
khamayom	therefore

** Here those conjunctive adverbs are mentioned that are in compound form, other conjunctive adverbs generally take the adverb-of-manner form (iCCuCul)*
Example of a conjuctive adverb that takes adverb-of-manner form:

intutul	finally

DOC: 12 - [ʌ] - Caret (Angerthas Moria #56)

at (ùt) [ʌt]

*At the end of appendix E, Tolkien says the Angerthas Moria #55 and #56 are "used for vowels like those heard in English "b u tter", **which were frequent in Dwarvish** and in the Westron."*

In English, the caret, or low-mid back unrounded vowel is a frequent vowel sound. It is a full vowel, absolutely essential to the word's identity (not a reduced vowel like the schwa).
Acoustically, for speakers of General American English there is little to no difference between the caret vowel [ʌ] and schwa vowel [ə] sound. Depending on dialect, it may correspond to any of the following written letters:
Examples of the caret vowel sound in English:
'u', as in the first vowel of fluctuate [flʌktʃuɐɪt]
'u', as in british-english butter [ˈbʌtə˞] or as in american-english butter [ˈbʌɾə˞]
'u', as in nun [nʌn]

In khuzdul the caret [ʌ], knows as "at" [ʌt] (at time written as "ùt"), serves as a full vowel. Because of its vocal proximity to [ɑ] or o [ɔ] it is often written as either a or o. Example:
In the tomb inscription of Balin, Angerthas Moria #56 is used in place of the "o" in the English word "son"
In khuzdul the low-mid back unrounded vowel sound is always present in singular words (written as either a or o) when it preceeds a fricative (f, s, sh, z, h and j).
In such cases the vowel is indeed an "at" [ʌ], and NOT an [ɑ] or o [ɔ]. It is never present in plural forms, nor does it apply to extended vowels (â and ô).
When an a or o preceeds a stop (b, d, g, t, th, k, kh and ' (glottal stop)), liquid (l or r), glide (w) or nasal (m, n), the vowel is effectively an [ɑ] or o [ɔ], and NOT an "at" [ʌ].

Examples where the "at" [ʌ] is written as "a":
d**a**sh [dʌʃ] ("cruel")
afakil [ʌfɑkil] ("except")
th**a**far [tʰʌfɑr] ("grey")
m**a**j**a**zrul [mʌdʒ͡ʌzrʊl] ("that which is knotted") (here the "at" is present twice)

Examples where the "at" is written as "o":
oshir [ʌʃɪr] ("art of smoking")
y**o**f [jʌf] (interjection: familiar expression of thanks)
g**o**zig [gʌzɪg] (Grey Mountain from for "the dragon")

Examples were the "at" - when an "a" or "o" preceed a fricative - are NOT an "at" [ʌ] :
Kh**a**zâd [kʰ**ɑ**zɑːd] ("the dwarves") (as a plural form the "a" preceeding the fricative (z) is pronounced as [ɑ], not as [ʌ]) [kʰɑzɑːd]
dam**a**sî [dɑm**ɑ**siː] ("elements of law") (as a plural form the "a" preceeding the fricative (s) is pronounced as [ɑ], not as [ʌ])

Exceptions:
M**a**h**a**l [m**ɑ**h**ɑ**l] ("Aüle, The Great Smith")

"at" in history
At the time of Durin the Deathless the "at" was always written in full.

"at" rune in Angerthas Moria (Moria Style Cirth)

Over time however the written "at" became shortened, resulting by T.A 2146 in a small mark (as seen in Angerthas Erebor).

"at" rune in Angerthas Erebor (Erebor Style Cirth)

Unlike the abn (schwa), the "at" was never ommited in writing.
The eastern dwarven clans (Stiffbeards, Ironfists, Blacklocks and Stonefoots) still use the Moria Style "at" rune.

Etymology:
The word "at" [ʌt] is likely onomatopoetic (resembling the sound that it describes) and does not have any root in existing khuzdul words.

DOC: 13 - [ə] - Schwa vowel (Angerthas Moria #55)

abn [abən]

*At the end of appendix E, Tolkien says the Angerthas Moria #55 and #56 are "used for vowels like those heard in English "butt e r", **which were frequent in Dwarvish** and in the Westron."*

In English, the schwa vowel is the most common vowel sound. It is a reduced vowel in many unstressed syllables, especially if syllabic consonants are not used.
Depending on dialect, it may correspond to any of the following written letters:
Examples of the schwa sound in English:
'a', as in about [əˈbaʊt]
'e', as in british-english butter [ˈbʌtə-] or as in american-english butter [ˈbʌrə-]
'i', as in pencil [ˈpʰɛnsəl]
'o', as in eloquent [ˈɛləkʰwənt]
'u', as in supply [səˈpʰlaɪ]
'y', as in sibyl [ˈsɪbəl]
various combinations of letters, such as 'ai' in mountain [ˈmaʊntən]
unwritten as in rhythm [ˈrɪðəm]

In khuzdul the schwa [ə], knows as" abn" [abən], serves as an implied vowel and requires no didactic marks (unwritten).
Abn is seen in consonant combinations that are not followed by a vowel.
It appears between two stops - b, d, g, t, th, k, kh and ' (glottal stop) or when a stop preceeds a nasal (m or n), glide (w) or liquid (l or r).
It also appears when a nasal preceeds a glide or liquid, between two liquids, or when a liquid preceeds a glide.
When a nasal, liquid or glide preceed a stop, the abn is NOT used.
Any combination with fricatives (f, s, sh, z, h and j) does NOT use the abn.

Examples where the abn IS used:
'a**kht** [ʔə**k**ʰ**ə**t] ("the core") (between two stops)
la**bb** [l**ə**b**ə**b] ("the lick") (between two stops)
ba**kn** [bɑ**kən**] ("the morning") (stop preceeding a nasal)
u**bd** [ʔʊ**bəd**] ("the body") (between two stops)
su**lr** [sʊ**lə**r] ("the slave") (between two liquids)

Examples where the abn IS NOT used:
Frictive combinations / nasal, liquid or glides preceed the stop (NEVER use the abn)
khu**zd** [kʰʊzd] ("dwarf") (frictive preceeding a stop)
ru**khs** [rʊkʰs] ("orc") (stop preceeding a frictive)
ba**rk** [bɑrk] ("axe") (liquid preceeding a stop)
mu**rd** [mʊrd] ("dead person") (liquid preceeding a stop)

Abn in history
At the time of Durin the Deathless the abn was always written in full.

abn rune in Angerthas Moria (Moria Style Cirth)

Over time however the written abn became shortened, resulting by T.A 2146 in a small mark (as seen in Angerthas Erebor).

abn rune in Angerthas Erebor (Erebor Style Cirth)

By the late 23rd century of the third age however, the abn is ommited in almost all writing, safe the most official records such as royal decrees.
When the dwarves return to the Lonely Mountain in T.A 2590 (after the defeat in the war of Dwarves and Dragons) the abn is by now ommited in all writing, even royal decrees.
For the Longbeards it becomes a remnant of an earlier writing style, which is spoken yet no longer written.
However, even by the third age the eastern dwarven clans (Stiffbeards, Ironfists, Blacklocks and Stonefoots) still use the Moria Style abn rune.

Etymology:
The word "abn" [abən] is derived from the khuzdul word 'aban, meaning "stone", which may have its roots in the ancient khuzdul idiom "imzêl 'abən" ("setting a stone in place" - meaning: clarifying something, putting emphasis on something).

DOC: 14 -Monophthongization (of diphthongs) and vowel crasis

Monophthongization (of diphthongs) indicates a diphthong (ai, au, etc…) changes into a single vowel sound which does not glide up or down toward a new position of articulation (a, u, e, etc…).
Crasis is a type of contraction in which two vowels or diphthongs merge into one new vowel or diphthong

Monophthongization (of diphthongs)

ORIGINAL	BECOMES	
ay	ê	(as seen in Classical Arabic)
iy	î	
au	ô	(as seen in Classical Arabic)
aw	â	(as seen in Hebrew and other Northwest Semitic Languages)
uw	û	(as seen in Hebrew and other Northwest Semitic Languages)
iw	î	
ew	ê	
ow	ô	
aiy	ai	

Note: An identical monophtongization also occurs if one of the vowels is a long vowel (example: âu = ô)
Note: "ayi" can be shortened to "ê", yet is accepted in its full form as well. Only in compound words will "ayi" always be written and pronounced as "ê"
Note: "w" is seen as a strong letter and a full consonant if surrounded by vowels, and in such combination does not undergo crasis. (example: "uwâdar")
Note: "aiy" is shortened to "ai", yet if followed by another vowel the "i" in "ai" is removed. (example: "aiyi" becomes "ayi")

Weak letter Crasis

Weak letter crasis occurs almost exclusively when a vowel precedes AND follows a glottal stop ('). It can also be seen with the semi-weak letter "y", though rare.

However, not every vowel contact with these weak letters will automatically result in a vowel change.

aya	ai-*	(taken from Tolkien's "ai-mênu")
		*Note: only with the preposition "aya (on/upon)" does this vowel combination undergo crasis, nouns that contain the vowel/y combination "aya" do not undergo crasis (example: "rayad")

Rule of weak letter crasis: **when the glottal stop is surrounded by two vowels, crasis will take place, taking the form of the last vowel.**
Example:

ORIGINAL	BECOMES	
u'a	a	(seen in Gundu'abad = Gundabad)

Crasis of "ai"

"ai" is treated is if it were a monophthong, yet when combined with the weak letter "y" or "w", it consumes these weak letter and remains "ai".

This unusual form of crasis is most prominent in verb conjugations where one of the radicals is "y" or "w".
Example: The interactive imperative form of [WDR] would normally give us "naiwdiri" yet becomes "naidiri" ("become aware together!").
When one or both of the vowels of "ai" is extended ("âi", "âî" or "aî") it becomes pronounced through the usage of "y" (resulting in "ayî", "âyî" or "âyi").

Monophthongization of Compound Formed Diphtongs

Some compound words contain two word-elements in which the first element ends in a vowel and the second starts with a vowel, thus creating a diphthong.
Example: raimu + ezash (backpack - literally: "back-bag")
As khuzdul only has one proper diphthong ("ai"), all others undergo monophthongization.
Monophthongization of compound formed diphthongs is similar to weak letter crasis, in which the last vowel determines the post-crasis form.
Note: This type of crasis also occurs when one of the vowels is a long vowel (example: û+a = a)
Example:

ORIGINAL	BECOMES	
ue	e	(seen in raimuezash = raimezash)

Exception: "au" becomes "ô" (see above)

Crasis of Compound Formed Twin (or fraternal) vowels

Some compound words contain two word-elements in which the first elements ends in the same vowel as the second word starts with.
Example: guntu + ukraf ("oathbreaker")
In such cases the twin vowel combination becomes a long vowel.
Even when one or both of the vowels already is a long vowel the crasis result will be one long vowel (referred to as crasis of fraternal vowels, example: â+a = â).
Example:

ORIGINAL	BECOMES	
uu	û	(seen in gun**tuu**kraf = gun**tû**kraf)

In rare situations (as seen with elative and sublative) glottal stop crasis does not occure, instead the glottal stop transforms into a voiceless glottal transition ("h").
Example: " 'u'al" becomes " 'uhal" ("most mellifluous").

A similar stop-to-voiceless-transition transformation can be seen in such cases where a vowel is surrounded by two glottal stops.
Example: " 'u'bad becomes " 'uhbad" (greatest mountain)

Complete list of Khuzdul Crasis

Forms in which glottal stop crasis and vowel crasis is not identical are marked in red

first vowel	second vowel	pre-crasis	post-crasis	glottal stop pre-crasis	glottal stop post-crasis

û	ô	ûô	ô	û'ô	ô
ê	ô	êô	ô	ê'ô	ô
ô	ô	ôô	ô	ô'ô	ô
î	ô	îô	ô	î'ô	ô
a	**î**	**aî**	**ayî**	**a'î**	**î**
u	î	uî	î	u'î	î
e	î	eî	î	e'î	î
o	î	oî	î	o'î	î
i	î	iî	î	i'î	î
â	**î**	**âî**	**âyî**	**â'î**	**î**
û	î	ûî	î	û'î	î
ê	î	êî	î	ê'î	î

ô	î	ôî	î	ô'î	î
î	î	îî	î	î'î	î

Exceptions:

Note: Passive Jussive Form usually does not undergo full crasis (Example: "let it be climbed" - "ma+'abad+a" becomes "m'abada", instead of "mabada")
This can lead to confusion as "it did not climb" - "ma + 'abad+a" also becomes "m'abada, as "ma" (not) is a seperate word it is never subject to full crasis.
In such cases lexical stress will indicate the meaning: m'a**bad**a (let it be climbed) vs **m'a**bada (it did not climb).

Irregular Crasis:

At rare times tri-radical verb constructions in combination with verb conjugations may result in combinations with three consecutive identical consonants, this will automatically be reduced to two consonants.
Examples:
Past Participle Perfect Form: "matemmâ", meaning "we have whistled (recently)", is formed by ma+CvCC+mâ.
Seeing that the last two consonants of the base CvCC are "m", this would result in ma+temm+mâ.
As such without crasis one would get: "matemmmâ", which is an impossible consonant combination in Khuzdul, hence this is automatically reduced to "matemmâ".

--- By The Dwarrow Scholar - Your source for all things Dwarvish ---
Khuzdul is the language of the Dwarves in J.R.R. Tolkien's legendarium set in Middle-earth.
For these Neo-khuzdul documents both the original Tolkien material, David Salo's Neo-Khuzdul and Khuzdul used in Turbine's LoTRO have been used.
This is my personal interpretation of Tolkien's dwarvish language, I do not claim this content to be canon.
This document is an interpretation of Tolkien's work and any Khuzdul related material, all rights are reserved for their proper owners.
Any reference to The Lord of the Rings Online or any other brand name is not meant to claim ownership of material.

DOC: 15 -Geminate (Doubled) Consonants

Khuzdul consonants, like vowels, can be lengthened. This duplication of a consonants is called gemination.
The closest phenomenon to gemination in English is the repetition of the same consonant in successive positions either in separate or compound words but with an intervening open transition (or pause).
Examples in English of such sounds are: "black cat", "cattail", "midday" or "homemade".

Gemination is present in Plural Noun Type 8 words, such as "zahhar" **[zah.har]** (buildings), using the Ca**CC**aC-form". As opposed to the singular form which is "zahar" **[zahar]** (building)".

Gemination is also seen with Energetic Nouns (MaCa2**CC**aC and MaCa2**CC**âC) and Energetic Mood Verbs
- both these Energetic Types indicate an object, action or person that undergoes or undertakes a long-continued, repeating, or otherwise extreme action.
Examples: "darrafa (he continues to kill)" / "madarrâf (they who continue to kill)"

Phonetical Example:
adad (singular "father"): **[ɑdad]** vs addad (plural "fathers): **[ɑd.dad]**

Note: the glottal stop (ʔ) is never geminated and will always be reduced to a single glottal stop in compound words.

DOC: 16 - STRESS

Most native Khuzdul words (the bulk of the core vocabulary) are stressed on the root syllable, which is usually on the first extended vowel (â, ê, ô, û, or î), or (if no extended vowel is present) on the first syllable of the word.
Khuzdul words may also be stressed on the second or later syllable if certain unstressed prefixes are added (particularly in verbs).
In polysyllabic words, secondary stress may also be present. Certain prefixes and suffixes will receive secondary stress: "ai-mênu" (stress placed primarily on "ê", with secondary stress on "ai")
Within a compound word, the stress will usually be present in the last word of the compound, though not necessarily the last vowel of that word.

Note also that any long vowels in the other words of the compound will be reduced (Khazâd (dwarves) + Dûm (halls), becomes: Khazaddûm (â becomes a in "khazâd").
Khuzdul possesses a strong stress accent and uses stress timing due to its relatively complex syllable structure.
Khuzdul has a preference for trochaic rhythm, with relatively stronger and weaker stress alternating between syllables in such a way that syllables with stronger stress are produced at a more or less constant pace.
In most words that contain a long vowel, the primary stress of the word will fall on this long vowel, example: "binarthâkh (directionless)" - in this case stress is almost exclusively placed on the long vowel "â".
In the rare cases where a word contains two long vowels (usually after undergoing crasis * see crasis documentation), stress is usually placed on the last long vowel. Example: "ênâd" (births).

DOC: 17 - Khuzdul Definite Article:

The definite article in Khuzdul is formed by adding the prefix "id" to the noun.
"id" is equal to "the" in English and it should be connected to the noun. Example: the fire = id-urus.
It is important that this prefix marks the definite accusative - that is, it comes before a noun which is the direct object of a verb, if that noun is not being newly introduced into the universe of discourse
- that is, it has been previously mentioned or implied, or can be assumed to be well-known to the person or persons spoken to.
You can find the direct object by finding the verb and asking what? (or whom?), example: "will speak what? (see example below).

The definite article "id" is not all the time pronounced or written as "id-".
If the noun in question starts with one of the following letters: B, T, Th, D, K, Kh, G, L, R, the "id-", will turn into "ib-"," it-"," ith-", "ik-", "ikh-", "ig-", "il-" or "ir-" respectively
(only stops and liquids, no fricatives, nasals or glides).

Examples: the dwarves = ikh-khazâd, the fortress = ig-gathol, the arms =ib-bekâr
This process is called assimilation. An easy way to make the pronunciation easier, just like the way English does with the indefinite article "a" (a book, but an eagle).
Note that the assimilation, when applicable, is both in pronunciation and in writing.

Khuzdul Indefinite Article:
Khuzdul does not have an indefinite article (examples: "a dwarf - khuzd", "an axe - "bark")
In Khuzdul you must leave the word with no article, which will automatically imply an indefinite article (or definite if the noun is newly introduced - see above).

Tip: A little mnemonic device to assist you in remembering the letters that do assimilate is: *"B a RK R a G a Th o L T a DKh i T i"* (axe and fortress rest) - as all consonants in this phrase are indeed those that assimilate.
They obviously need to rest after all that assimilating :)

The combination of the definite article + noun is called the "***emphatic (noun) construction***" or the "emphatical state".

EXAMPLE:
You can find the direct object by finding the verb and asking what? (or whom?).

"Fund zataglibi id-aglâb"
"The elf will speak the language"

Step 1. Find the verb
(will) speak / zataglibi
Step 2. Ask "will speak WHAT ?" = the language
Therefore, the direct object is "the language".
Step 3. Marking with "id-" or not? Has the noun ("language") previously been mention or is assumed to be well-known to the person spoken to?
Though it is newly mentioned, we have no clear idea what language we are talking about in this situation.
Therefore, the direct object must be marked with "id-".
Step 4. Does the "id-" assimilate?
No. The noun "language" ("aglâb") starts with an "a", hence does not assimilate and remains "id-".

Note: as "the elf" is the subject of this example it will not get a definite article, hence "fund", instead of "id-fund".

--- By The Dwarrow Scholar - Your source for all things Dwarvish ---
Khuzdul is the language of the Dwarves in J.R.R. Tolkien's legendarium set in Middle-earth.
For these Neo-khuzdul documents both the original Tolkien material, David Salo's Neo-Khuzdul and Khuzdul used in Turbine's LoTRO have been used.
This is my personal interpretation of Tolkien's dwarvish language, I do not claim this content to be canon.
This document is an interpretation of Tolkien's work and any Khuzdul related material, all rights are reserved for their proper owners.
Any reference to The Lord of the Rings Online or any other brand name is not meant to claim ownership of material.

DOC: 18 -The verbs "To Be" and "To Have"

TO HAVE

In the Imperfect Form (present, future, vivid past) Khuzdul does not have seperate verbs for "to have"

For "to have" a combination of the noun and the lative personal pronoun is used. Examples:

English	*Literal Translation*	*Khuzdul*
I have a house	"house to me"	zahar dê
He has an axe	"axe to him"	bark duhû

For an overview of all lative personal pronouns please refer to personal pronouns overview

To indicate a state of possession in the PAST Khuzdul uses an irregular variation of the verb "to own (owned)", as "to have (had)", in a PERFECT structure.

Original "Owned" - Perfect Form of "to own"

I	You-M	You-F	He/It	She	We	You-PM	You-PF	You-M (Familiar)	You-F (Familiar)	They-M	They-F
gunurmi	gunursu	gunursi	gunurâ	gunurai	gunurmâ	gunursun	gunursin	gunurmên	gunurmenin	gunurôn	gunurên
I owned	you owned	you owned	he owned	she owned	we owned	you owned	you owned	you owned	you owned	they owned	they owned

Form	*Translation*	*Khuzdul*
I	I had	**ganarmi**
You-M	you had	**ganarsu**
You-F	you had	**ganarsi**
You-SM (Familiar)	you had	**ganarmê**
You-SF (Familiar)	you had	**ganarmeni**
He/It	he had	**ganara**
She	she had	**ganarai**
We	we had	**ganarmâ**
You-PM	you had	**ganarsun**
You-PF	you had	**ganarsin**
You-PM (Familiar)	you had	**ganarmên**
You-PF (Familiar)	you had	**ganarmenin**
They-PM	they had	**ganarôn**
They-PF	they had	**ganarên**

Example

I had an axe	**ganarmi bark**
we had a house	**ganarmâ zahar**

Both "ganara" and "kasat" are considered irregular not only because they are the only verbs to conjugate differently from the seven standard structures, but because they are the only verbs to be specific for events that occur in the PAST, not indicating the usual "dependable" (perfect) or "vividly ongoing" (imperfect) states.

TO BE

In the Imperfect Form (present, future, vivid past) Khuzdul does not have a seperate verb for "to be" as it is understood in English.

For "to be" a combination of the noun/adjective and the nominative personal pronoun is used. Examples:

English	*Literal Translation*	*Khuzdul*
I am a dwarf	"I dwarf"	e khuzd
we are happy	"we happy"	ammâ gêdul

For an overview of all nominative personal pronouns please refer to personal pronouns overview

To indicate a state of being in the PAST Khuzdul uses an irregular variation of the verb "to exist (existed)", as "to be (was)", in an IMPERFECT structure.

Original "Existed" - Perfect Form of "to Exist"

I	You-M	You-F	He/It	She	We	You-PM	You-PF	You-M (Familiar)	You-F (Familiar)	They-M	They-F
kusutmi	kusutsu	kusutsi	kusuta	kusutai	kusutmâ	kusutsun	kusutsin	kusutmên	kusutmenin	kusutôn	kusutên
I existed	you existed	you existed	he existed	she existed	we existed	you existed	you existed	you existed	you existed	they existed	they existed

Form	*Translation*	*Khuzdul*
I	I was	**kasatmi**
You-M	you were	**kasatsu**
You-F	you were	**kasatsi**
You-SM (disrespectful / contemptuous)	you were	**kasatmê**
You-SF (disrespectful / contemptuous)	you were	**kasatmeni**
He/It	he was	**kasat**
She	she was	**kasati**
We	we were	**kasatmâ**
You-PM	you were	**kasatsun**
You-PF	you were	**kasatsin**
You-PM (disrespectful / contemptuous)	you were	**kasatmên**
You-PF (disrespectful / contemptuous)	you were	**kasatmenin**
They-PM	they were	**kasatôn**
They-PF	they were	**kasatên**

Example

I was happy	kasatmi gêdul
you were important	kasatsu zudur

Note: As a supportive verb in the passive voice kasat / ganara turns into maksat / magnara (being / having)

*Though Khuzdul does have a verb similar in meaning to "to be", called "tâti", the forms associated with this verb are considered classical and rarely used much around the end of the third age. Yet, its usage can still be observed when the user wishes to explicitly emphasize a state of being. Example: "Ranakmi, khamayom **'atmi** " ("I think, therefore I am"). The verb has forms in nearly all tenses.*

	Dependable (PERFECT)		**Vivid (IMPERFECT)***	
I	I was (I am)	**'atmi**	I am	**âti**
You-M	you were (you are)	**'atsu**	you are	**sâti**
You-F	you were (you are)	**'atsi**	you are	**sâtiya**
You-SM (disrespectful / contemptuous)	you were (you are)	**atmê**	you are	**sâtmî**
You-SF (disrespectful / contemptuous)	you were (you are)	**atmeni**	you are	**sâtmaya**
He/It	he / it was (he / it is)	**'ata**	he is (it is)	**tâti**
She	she was (she is)	**'atai**	she is	**tâtiya**
We	we were (we are)	**'atmâ**	we are	**mâti**
You-PM	you were (you are)	**'atsun**	you are	**sâtin**
You-PF	you were (you are)	**'atsin**	you are	**sâtiyan**
You-PM (disrespectful / contemptuous)	you were (you are)	**'atmên**	you are	**sâtmîn**
You-PF (disrespectful / contemptuous)	you were (you are)	**'atmenin**	you are	**sâtmayan**
They-PM	they were (they are)	**'atôn**	they are	**tâtîn**
They-PF	they were (they are)	**'atên**	they are	**tâtiyan**

** Note the extended first vowel in the imperfect tense, which is an irregular variation.*

DOC: 19 -Determining the Dwarven Hour

A dwarven hour is defined as 1/12th of the time between sunrise and sunset.

A dwarven day ("nurt") consists of 12 dwarven night hours ("lomil") and 12 dwarven day hours ("galz"). An easy way to measure dwarven day hours is to use a equiangular sundial marked with 12 divisions.

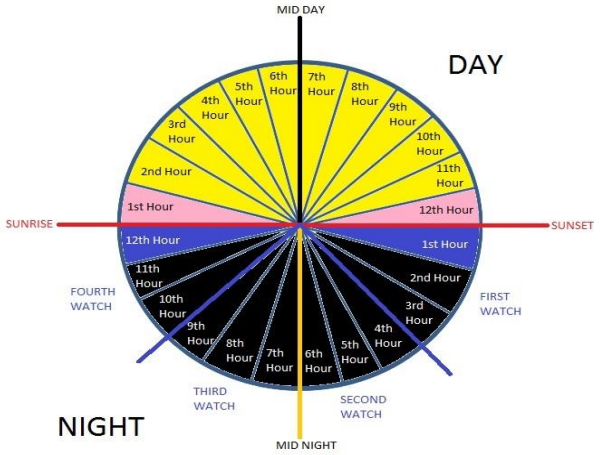
Sunset occurs exactly at the end of the twelfth dwarven day hour.

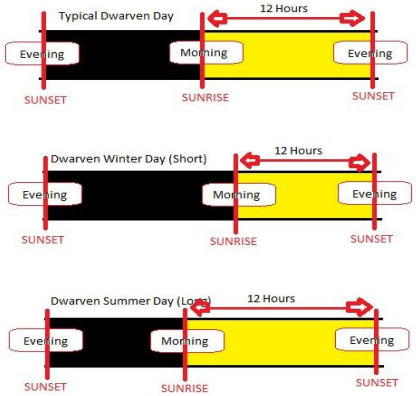
The duration of the a dwarven hour varies with the seasons. A dwarven day hour is shorter in winter and longer in summer. While a dwarven night hour is longer in winter and shorter in summer.

There are always exactly 24 dwarven hours between two sunsets. However, the duration of time between two sunsets measured in civil hours, minutes and seconds changes slightly throughout the year. The dwarven 24 day ("nurt") is longest at the spring equinox, and shortest at the autumn equinox (a difference of just over/under a minute on either side).

From the First Age exact calculations of sunrise and sunset were done from Khazaddûm (Durin's Tower on Zirakzigil). Dwarves were informed of watch changes and the mid day 7th hour through "hour-calls" (where a dwarf would announce the hour).

By the Third Age dwarves estimated the hour of sunrise and sunset as the skill to precisely determine it was lost. Also, by this time, though dwarves still used dwarven hour for ceremonies and referred to the dwarven hour through sayings such as *"at the bright 1st hour"* (said about something that occurs very early in the day), most dwarves used civil time measured in fixed hours and minutes by clocks in their daily doings (see below quote)





".... we have proceeded in advance to make requisite preparations, and shall await your respected person at the Green Dragon Inn, Bywater, at 11 a.m. sharp. Trusting that you will be punctual. We have the honour to remain - Yours deeply - Thorin & Co."

Denoting Time: (quarter past 7, quarter to 5, 4 thirty) (expression: "four o'clock: 4 hours", "quarter past 7 : 7 and a quarter", "quarter to 5: 5 less a quarter", "4 thirty: 4 and a half")

... PAST ...	Literal Translation	Khuzdul
quarter past seven	seventh (hour)* and a quarter	"hadêd (adrâm)* ra rumkhu"
five past ten	tenth (hour)* and five	"sasêkh (adrâm)* ra gamekh"
ten past one	first (hour)* and ten	"zê' (adrâm)* ra sasekh"
half past two	second (hour)* and a half	"nû' (adrâm)* ra amlâk"

(hour) adrâm is spoken in official matters only, in every day dialogue it is omitted.*

... O'CLOCK	Literal Translation	Khuzdul
one o'clock	first hour	"zê' adrâm"
ten o'clock	tenth hour	"sasêkh adrâm"
four o'clock	fourth hour	"ramêkh adrâm"

... TO	Literal Translation	Khuzdul
quarter to seven	seventh (hour) less a quarter	"hadêd (adrâm)* habkulul rumkhu"
five to ten	tenth (hour) less five	"sasêkh (adrâm)* habkulul gamekh"
ten to one	first (hour) less ten	"zê' (adrâm)* habkulul sasekh"

DOC: 20 - Elative and Sublative

Elative

The elative form is used to indicate a degree of positive comparison.
In Khuzdul, there are elative forms for both adjectives and nouns.
With adjectives it is used for positive comparisons (ex. "louder") and superlatives (ex. "largest").
With nouns it is used for comparative nouns (ex. "greater house") and superlative nouns (ex. "greatest axe")
Elative noun forms have both a singular and plural form.

Sublative

The sublative form is used to indicate a degree of negative comparison.
Like the elative form the sublative form is used with both adjectives and nouns.
With adjectives it is used for negative comparisons (ex. "not so proud") and proper sublatives (ex. "least visible").
With nouns it is used for comparative nouns (ex. "lesser house") and superlative nouns (ex. "lesser (least) axe")
Sublative noun forms have both a singular and plural form.

Examples:

Adjectives					
Type Adjective	*Translation*	Elative	*Translation*	Sublative	*Translation*
Form (various)		'uCCaC(ul)		'iCCaC(ul)	
tumun	*hollow*	**'utman(ul)**	*more hollow / most hollow*	**'itman(ul)**	*not so hollow / least hollow*
gabil	*great*	**'ugbal(ul)**	*greater / greatest*	**'igbal(ul)**	*not so great / least great*
gamil	*old*	**'ugmal(ul)**	*older / eldest*	**'igmal(ul)**	*not so old / least old*
baraz	*red*	**'ubraz(ul)**	*redder / reddest*	**'ibraz(ul)**	*not so red / least red*

Nouns									
Type Adjective	*Translation*	Singular Elative	*Translation*	Singular Sublative	*Translation*	Plural Elative	*Translation*	Plural Sublative	*Translation*
Form (various)		'uCCaC		'iCCaC		uCCâC		iCCâC	
zahar	*house*	**uzhar**	*greater / greatest house*	**izhar**	*lesser house*	**uzhâr**	*greater / greatest houses*	**izhâr**	*lesser houses*
bark	*axe*	**ubrak**	*greater / greatest axe*	**ibrak**	*lesser axe*	**ubrâk**	*greater / greatest axes*	**ibrâk**	*lesser axes*
zabad	*lord*	**uzbad**	*greater / greatest lord*	**izbad**	*lesser lord*	**uzbâd**	*greater / greatest lords*	**izbâd**	*lesser lords*
kibil	*silver metal*	**ukbal**	*greater / greatest silver metal piece*	**ikbal**	*lesser silver metal piece*	**ukbâl**	*greater / greatest silver metal pieces*	**ikbâl**	*lesser silver metal pieces*

Notes and Examples:

a) A glottal stop is spoken prior to all elative and sublative forms (both in nouns as adjectives), though often omitted in written form.
This to distinguish it from the TYPE 5 noun iCCaC (shape, form or pattern / Stative agent), ex. "inbar" and TYPE 12 noun uCCaC (person agent form), ex. "uzbad".

b) The full elative adjective form (ex. 'utmanul) is commonly used when the adjective is a lesser element of a sentence.
The short elative adjective form (ex. 'utman) is commonly used when the adjective is the primary (or more prominent) element of a sentence.
Example:
" Durin, id-**'ugbal** " ("Durin, the **Eldest**") vs. " Durin kasat **ugbalul** id-hadedu " ("Durin was the **eldest** of the seven")

c) To form a comparison (between two things) in Khuzdul, you use the elative adjective followed by "mi" ("than/as").
Examples:
" 'ala bark **'ufrathul mi** tada " ("This axe is **more expensive than** that one.")
"Dwalin **'uzdarul mi**ye ("Dwalin is **taller than** me.")

d) To form a superlative (comparing one thing to multiple other things), you can use the elative adjective followed by a noun. This has a basic "the [adj]est. [noun]" meaning.

Example:
" h'**ugmalul** id-buh " ("He's **the eldest** of the company")

e) Superlatives can also be formed with the elative noun form - this only applies when indicating "greatest" (though can mean "biggest" or "best")
Example:
" Gabilgathol kasat **'udam** Khagal'abbadu. " ("Mickleburg was **the greatest hall** of the Blue Mountains")

f) Using the same elative noun as in (e), a comparison can be made, followed by "mi" ("than")
Example:
"Gabilgathol kasat **'udam mi** Tumunzahar." ("Mickleburg was **a greater hall than** Hollowbold").

g) Sublative forms can be used in the exact same fashion as seen with elative forms - see (b), (c), (e) or (f).
Examples:
"Borin, id-**'ikhlam**" ("Borin, the **least rich**") vs "Borin kasat **'ikhlamul** id-buh" ("Borin was the **least rich** of the company")
"Dwalin **'igmalul mi** Durin" ("Dwalin is **not so old as** Durin")
" Tumunzahar kasat **'idam** Khagal'abbadu. " ("Hollowbold was **the lesser (least) hall** of the Blue Mountains")
"Tumunzahar kasat **'idam mi** Gabilgathol." ("Hollowbold was **a lesser hall than** Mickleburg").

DOC: 21 - When to use "-ul", "-u" or "-im-"

1) "-ul"

A) Partitive Case ("a piece of …" - indicating an element of)
B) Composition ("a group of …" - indicating multiple elements as a common group)
C) Lineage ("son of Fundin" (Fundinul) -indicating parental lineage)
D) Descriptive Origins ("from the iron" ("Zirnul") - indicating origins of an element)
E) Possessive Descriptive ("dwarvish" ("Khuzdul") - suffix used to indicate "after the manner of… / belonging to.." Commonly used with names.
F) Estimation ("about one tenth" ("ze suskhul") - suffix used to indicate it is similar to a value, though not exactly the value"

2) "-u"

A) Subjective Genitive ("the lord's knowledge" ("aktâb uzbad**u")** - participation in an action as an agent.)
B) Objective Genitive ("the love of music" ("amrâl**u** alfâm") - participation in an action as a patient.)*
C) Accusative Ending ("The dwarves are upon you" (khazâd ai-mên**u**) - designating the immediate object of an action, the intended result, the goal of a motion, or the extent of an action.)
D) Genitive Partitive ("Five of the dwarves" ("gamekh**u** khazâd") - indicates partialness, an element of a larger group.)
E) Possessive Genitive ("axe of the dwarf" ("bark**u** khuzd") - used to indicate a relationship of direct possession.)*
F) Ruling Genitive ("Lord of Moria" ("Uzbad Khazad-dûm**u**") - used to indicate rule over a territory or subject(s).)*

* Possessive Genitive and Objective Genitive use what is known as the "Construct State" - For more information on constructive case see *constructive state rules* documentation

3) "-im-"

A) Noun in combination with a Genitive Determiner ("love of my/mine" ("my love") ("amrâl**im**ê") - used to stress belonging or ownership.)
Structure when using "-im-" is always: "Noun + "-im-" + genetive determiner" (not proper genitive pronoun).
For a full list of the genetive determiners see "DOC: 01 - Neo-Khuzdul Personal Pronouns"

DOC: 22 -Compounds

Compounds are a collection of two or more words (either nouns, adjectives, or verbs) that form a new word (typically nouns or verbs)

Compound Nouns:

Examples:

Word 1	Word 2	Word 3	Word 1 Translation	Word 2 Translation	Word 2 Translation	Compound	Compound translation	
dwarves	mansions		khaz**â**d	dûm		Khaz**a**d-dûm	Dwarrowdelf	Example 1
long	line	instrument (music)	sigin	zadkh	lefam	siginzadkhlefam	harp	
(the) first	father	tongue	z**ê'**	**'**adad	lagb	**za**dad-lagb	Valarin	Example 2

Notes: When two or more of the elements of the compound contain an extended vowel ("â,ê,ô,û or î"), only the one that comes at the end of the compound retains its extended vowel(s) in the final compound. See example 1.
Notes: Crasis will always apply when applicable (see rules on crasis).
As Khuzdul does not have a doubled glottal stop, it will merge into a single glottal stop, becoming subject to crasis if surrounded by vowels. (zê'+'adad = zê'adad = zadad). See example 2.

Compound Verbs:

Khuzdul allows the formation of verbs based on compound nouns.
The formation and conjugation of these verbs is always based on the last noun in the compound.

Example:

Compound word: "Siginzadkhlefam" ("Harp") = compound of sigin (long) + zadkh (line) + lefam (musical instrument)
The verb: "to play a harp" uses the verb form of lefam ("to play a music").
*He played a harp = siginzadkh **lefema***
*He plays a harp = siginzadkh **talfimi***

Hyphenation (-) of Compounds:

Hyphenation does not exist in the runic script of Khuzdul.
Only when one writes Khuzdul in latin characters is it allowed, yet never obliged.
In the following cases hyphenation is allowed to occur when writing in latin characters:
* when the last sound of the first compound element is identical to the first sound of the last compound element, example: "khaza**d-d**ûm".
* when the last sound of the first compound element and the first sound of the last compound element are breath-heavy variants (Kh, Th, Gh), example: "ibda**kh-th**arkh" (crossroad)
* to ensure clarity when two alveolar consonants border each other as two elements of a compound word, example: "zada**d-l**agb" (Valarin)
Alveolar consonants are consonants that are articulated with the tongue against or close to the superior alveolar ridge (In Neo-Khuzdul these are: n, t, d, s, z, r, l)

DOC: 23 - Noun States

The term "noun states" refers to one of 4 states a noun can have in khuzdul.

Absolute state: a proper noun, with no article, either in the nominative or accusative. Examples: "bark" (axe), "zahar" (building)

Construct state: Indicates ownership of the noun (possessive genitive and objective genitive forms): Examples: "baruk" (axes of) - "zaharu" (building of)
Usually indicated by the back vowel changed to "u" in plural and "u" being added to the nominative form in singular (Example: "barku" - "axe of") - *See documentation on genitive forms for a more detailed overview.*

Emphatic state: please refer to the documentation on "articles", where the emphatic is explained in detail. Example: "The king"

Vocative state: is a noun that is brought to the listeners attention by a vocative preposition ("O …"). This meaning is conveyed by indicating the particle "yâh", placed before the noun. Example: "Yâh uzbad" ("O king").
Note: Though commonly the vocative preposition "yâh" is at present seperated from the noun, in historic documents (pre second age) it was commonly used as a prefix ("yâh'zbad")

DOC: 24 - Khuzdul Phonotactics for Borrowed Words

Khuzdul does not allow initial consonant clusters, meaning that any khuzdul word must either start with a vowel or have a vowel following the initial consonant.
Some Middle-Earth languages however do allow some initial consonant clusters.
As a result when words from these languages are borrowed into khuzdul these words are adapted to fit the Khuzdul phonotactics (permissible sound combinations of the language).
In khuzdul there are two manners in which borrowed words with initial consonant clusters are adapted:

*** Common:** Addition of the prothetic (initial) vowel "u"
Example: In Quenya the word for dragon "(h)lókë" (root "slok"), becomes "uslukh" in neo-khuzdul.

*** Exceptional:** Addition of "i", between the consonant cluster.
Example: In Quenya the word "hróva" (dark brown), becomes "hirba" in neo-khuzdul (dark brown hair).
(Comparable to Arabic "sira:tˁ" (street"), from Latin "stráta")

DOC: 25 - Varieties of Khuzdul

A) Regional Varieties

Though the regional differences between the seven clans and their various holds exist, they are rather limited compared to differences and evolution seen within other languages of middle earth:

"After their awakening this language (as all languages and all other things in Arda) changed in time, and divergently in the mansions that were far-sundered.
But the change was so slow and the divergence so small that even in the Third Age converse between all Dwarves in their own tongue was easy.
As they said, the change in Khuzdul as compared with the tongue of the Elves, and still more with those of Men, was 'like the weathering of hard rock compared with the melting of snow' Of Dwarves and Men" (HoME 10)

Though Khuzdul has a few varieties; dwarves of all mansions and clans are often able to manipulate the way they speak based on the circumstances.
There can be a number of motivations for changing one's speech: the formality of a situation,
the need to communicate with people with different dialects, to get social approval, to differentiate oneself from the listener
, when citing a written text, to differentiate between personal and professional or general matters, to clarify a point, and to shift to a new topic, to name but a few.

Regional Varieties in the Third Age:

1) Classical Khuzdul (CK) "Sutumkhuzdul"

Though often erroneously called "Longbeard Khuzdul" (as the Longbeards have several dialects depending on location), it is mainly used by the Longbeards and is the official form used in Erebor and most dwarven halls.
Given the prevalence of Classical Khuzdul in trade and royal documents, almost all dwarves that speak any form of Khuzdul are familiar with it.
Classical Khuzdul carries a considerable prestige in most dwarven communities, hence it is (with the exception of regions where RMK and BMK are dominant) spoken as main khuzdul variety in most dwarven halls.

2) Orocarni Varieties (Red Mountain Varieties) (RMK) "Barazkhuzdul"

A set of four Eastern dialects (Stonefoot, Ironfist, Blacklock and Stiffbeard) that differ somewhat in pronunciation and intonation, but are largely equivalent in written form.
Likely the khuzdul variety closest to original Khuzdul taught by Mahal (Aulë), due to minimal influences by other languages and dominance of dwarven trade and culture in the East.
Of these four Orocarni Varieties, Stonefoot dialect has likely diverged more than the other.

Typical differences from Classical Khuzdul: common presence of an uvular trill [R], divergence in vowel crasis forms (rarely resulting in "o"), rarity of shortened forms (example: always "ayɑ" instead of "ai-..")
,presence of a "pitch accent" in Stiffbeard dialect (a distinctive rising pitch of the last syllable)
,assimilation of dorsal consonants in the Stonefoot dialect ("kg" becomes "g", "kj" becomes "j")
usage of double subject in Stonefoot dialect (Example- "I drink - CK: "ashliki" RMK(Stonefoot): "ashliki(y)e" (literally "I drink I")
*, presence of the syllabic consonant*** [ŋ] in words that end with [aŋ] in Blacklock and Ironfist dialect (Example "garden" (bazan) CK: [bɅzan] RMK (BL&IF): [bɅzn̩])*
****syllabic consonants are otherwise completely unknown in Khuzdul*
change of "d" into "t" in compound words, in both written and spoken forms of the Blacklock dialect (Example: CK: "baraz-dûm" RMK BL: "baraz-tûm")

*3) Blue Mountain Dialect (BMK)** "Khagalkhuzdul"*

Likely the biggest divergence to Classical Khuzdul of all Khuzdul varieties, spoken mainly by Firebeards and Broadbeams in the Blue Mountains.
A version of Blue Mountain Dialect can also be found in the remote Longbeard/Broadbeam communities in the White Mountains (Zigil-Jabâl), which has undergone little to no change from its Blue Mountain origin.

Typical differences from Classical Khuzdul: complete lack of articles, extended vowels in all segments of a compound word
, different conjugations in both perfect, imperfect and imperative forms (Example: "You walk" - CK: "sabsini" BMK: "ubzûnzu")
presence of additional vowel sounds ([ø] and [æ] - mainly used in instances replacing "o" and "a", usage of velar nasal [ŋ] in various instances instead of "n" (mainly with words ending in "n"), and a voiced glottal fricative [ɦ] in place of the h [h].
presence of "v", "p" and "zh" consonants (likely still a remnant of early first age contact with men and elves).

4) Grey Mountain Dialect (GMK) "Thafarkhuzdul"

Often referred to as an accent, it shows little change from the Classical Khuzdul spoken in Erebor.

Typical differences from Classical Khuzdul: more occurrences of the open-mid back unrounded vowel (caret) [ʌ] (also seen as a replacement for "e" - especially as last vowel)
when the letter "t" is the last letter of a word it is omitted in pronunciation. (Example: "absât" ("health") - CK: [absa:t] GMK: [absa:]
GMK is one of only two Khuzdul dialects which assimilates sounds in spoken form, in particular with sibilants. Example: "mushz" (rodent) [muʃaz] is pronounced as [muz]
Among the Longbeards GMK may be associated with backwardness and will therefore not carry 'mainstream prestige'.

5) Iron Hills Dialect (IHK) "Zirinkhuzdul"

Influenced by the Orocarni varieties (mainly the Stiffbeard and Ironfist dialect) due to proximinity via trade routes.

Typical differences from Classical Khuzdul: some occurrences of an uvular trill [R], presence of a "pitch accent" (particularly a dragging tone)
, usage of plural first person conjugation for singular first person form (example: I drink: SK: "ashliki" IMK: "mashliki(y)e" (literally: "we drink I")
, usage of a additional negative element (Example: "Thorin has no coins" - CK: "Thorin mabakh zizî duhû" IHK: "Thorin mabakh zizî lo duhû")

6) Moria Variant (MV) - LoTRO "Imkhêdkhuzdul"*

With the arrival of several colonists from the Blue Mountains, the influence of Blue Mountain Khuzdul (BMK) has been quite prominent among the brave new settlers of Moria.
Especially on newly made maps (often made by Firebeard colonists skilled in map making).
As such place names found on maps in Moria are often a Moria Variant (MV) (original BMK or a mixture of Classical Khuzdul (CK) and BMK). In the dictionaries both the CK and MV versions have been listed.
MV is used for place-names mainly and as such cannot be seen as an independent dialect.

B) colloquial vs. formal

Typical of colloquial khuzdul is the syncope of unstressed vowels (the loss of an unstressed vowel from the interior of a word), Example - Formal CK: "ai-fanadumên" - Colloquial CK: "ai-fnadumên" (upon your elves).
Another characteristic of colloquial khuzdul is the presence of elision (the omission of one or more sounds (such as a vowel, a consonant, or a whole syllable) in a word or phrase, producing a result that is easier for the speaker to pronounce).
In colloquial khuzdul elision comes naturally, and it is often described as "slurred" or "muted." Often, elision is deliberate.
Example of elision in colloquial khuzdul - "I am going to" - Formal: "agnigi du" → Colloquial: "agnidu" / Can be compared to a similar elision in English: "I am going to" → "I'm gonna".
Colloquial khuzdul also sees specific versions of dissimilation (whereby similar consonants or vowel sounds in a word become less similar)
Examples of dissimilation in colloquial khuzdul - "those that are sweeteners" - Formal: "haluwâl" → Colloquial: "halwâl" / "joy-place" - Formal: "giydîn" → Colloquial: "gîdîn".

**Note: (actual reason): Some of the words used for place-names in LoTRO either did not fit my internal language structure for neo-khuzdul, or broke one (or more) rules of the language as J.R.R. Tolkien had devised. Hence these needed to altered to still fit with the rest of this neo-khuzdul version.*

***Note: What is now the Blue Mountain Dialect of Khuzdul was in fact my initial neo-khuzdul version (the initial version of my neo-khuzdul dictionaries can now in fact be considered to be Blue Mountain Khuzdul).*

DOC: 26 - Khuzdul Alphabet

Alphabet Types

The Neo-Khuzdul word for "alphabet" is "**mannagkâkh**", literally meaning "letter order".
There are three variants of *mannagkâkh* , which are linked to two runic scriptures.

A) "**Famnût**" - from the first three letters: "fam/unu/ut" - the alphabet used with Moria Cirth (Kirth Khazaddumu) - contains 36 letters
Order: ᛋᛟᛚᛒᚢᚾᛏᚴᛇᛘᚠᛃᛊᚲᛉᚱᛞᚺᚷᚨᚴᚳᚳᚢᚱᚱᚺᚾᛒᚦᚾᚣᚣᚠᛇᚢᛏ

B) "**Famunthaman**" - from the first four letters: "fam/unu/thamu/an" - the alphabet used with Ereborian Cirth (Kirth 'Urd) - contains 30 letters
Order: ᛋᛟᛏᚢᚾᛞᛊᚲᛉᛁᚳᚷᚨᚱᚺᚾᛒᚦᚾᚣᚣᚠᛇᚳᚳᚦᚾᛋᛏ

C) "**Famunyam**" - from the first three letters: "fam/unu/yamuy" - the alphabet that is used for non-native texts or text written in Blue Mountain Khuzdul, includes several non-native (elvish) runes - uses Moria Cirth, yet can be written in Ereborian Cirth - contains 38 letters
Order: ᛋᛟᛋᛒᛏᚢᚾᛉᛁᚲᛊᚲᛉᚴᚺᚷᚨᚴᚳᚳᚢᚱᚱᚺᚾᛒᚦᚾᚣᚣᚠᛇᚳᚳ

--- By The Dwarrow Scholar - Your source for all things Dwarvish ---

Khuzdul is the language of the Dwarves in J.R.R. Tolkien's legendarium set in Middle-earth.

For these Neo-khuzdul documents both the original Tolkien material, David Salo's Neo-Khuzdul and Khuzdul used in Turbine's LoTRO have been used.

This is my personal interpretation of Tolkien's dwarvish language, I do not claim this content to be canon.

This document is an interpretation of Tolkien's work and any Khuzdul related material, all rights are reserved for their proper owners.

Any reference to The Lord of the Rings Online or any other brand name is not meant to claim ownership of material.

Doc 29 - Dwarven Calendar (2014-2015)

	KHUZDUL NAME	English name	starts	ends
2013-2014	Month 1	'afdehar	"Anvil Moon"	05/10/2013	02/11/2013

NOTES:

The Dwarven Calendar is a lunar calendar, each month starting on a new moon. 7 out of 19 years have 13 months (13 month year: *"fantêrâs"*), while the rest have 12 months (12 month year: *"bashkêrâs"*). A 19 year cycle is called a *"tagersasekhanrât"* Each year consists of 5 months with 28 days (months 1, 3, 6, 8 and 10) and 7 months with 29 days (months 2, 4, 5, 7, 9, 11 and 12). The 13th month always has 27 days. A dwarven year has thus either 343 days or 370 days. The dwarven new year falls on the first day of the last moon of autumn on the threshold of Winter.

The Dwarven seasons are counted somewhat differently than our modern day seasons. The dwarves mark 6 seasons instead of 4, as a season is seen as a period spanning 2 or 3 moons. Yet, certain occurances marked the start of the seasons: * Iklaladrân (Winter): From the sunrise of the 19th day of the first month (18 days after the Dwarven New Year) [October/November] till sunset of Forge Day Fest [January/February].

*** Spring (shulukadrân and kaylithadrân): the 19th day of the 4th month marked the** yearly Forge Day Fest, which lasted from sunrise till sunset. At sunset the last fall of the hammer marked the end of winter. The sunrise on the day after Forge Day Fest marked the start of shulukadrân (wet-season - referring to the melting of the snow), which lasted till the sunset of the last day of the 5th month [January/February till February/March]. The majority of Longbeards, Firebeards, Stiffbeard and Ironfists (clans that have Halls in more colder climates) often consider shulukadrân to still be part of winter.

The sunrise on the first day of the 6th month marked the start of kaylithadrân (literally: "young-life time" - usually translated as "spring"), it also marked the start of the 20-day-long Blessed Green Feast (spring festival). Kaylithadrân lasted till the sunset on the last day of Harnkegger Fest, a 10-day-long festival that ended on the 19th day of 8th month.

* 'Arsadrân (Summer): The sunrise on the day after Harnkegger fest usually marked the beginning of 'arsadrân ("hot time"). 'Arsadrân lasted till sunset on the 19th day of the 10th month.

* *Dabladrân* ("mild time" - Summer/Autumn): Sunrise on the 20th day of the 10th month marked *"dabladrân"* ("mild time"), which lasted till the sunset of the last day of the 11th month at which time the "Night of the Kill" (a yearly ceremony) was held. The majority of Stonefoots, Blacklocks and Broadbeams (clans that have Halls in more temperate climates) often consider dabladrân to still be part of summer. In these Halls dabladrân is referred to as "munutadrân" ("dry time").

* Injamadrân ("leaf time" - Autumn) started on the first day of the 12th month. The season lasted either 1 or 2 months (depending if the year consisted of 12 or 13 months). The Treasures of the Land Fest (Harvest Fest), which starts at the last day of the 12th month marks the years end for 12 years out of each 19 year cycle. In such years The Dwarven New Year and Durin's Day (Longbeards) occur within the harvest fest.

The Dwarven week has seven days and starts on a Friday.

Abkân-nurt (Ab)/ awakening-day (Friday - first day of the week)

Thatrnurt (Tht)/ star-day (Saturday - second day of the week)

Ibrizrnurt (Ib) / Sunday (third day of the week)

Izgilnurt (Iz)/ moon-day (Monday - fourth day of the week)

Akhlathnurt (Akh) / sky-day (Tuesday - fifth day of the week)

Adadnurt (Ad) / father-day (Wednesday - sixth day of the week)

Thanbnurt (Thn)/ thunder-day (Thursday - seventh and last day of the week)

Typical Dwarven Seasons (varies depending on climate)

OCT	NOV	DEC	JAN	FEB	MAR	APR	MAY	JUN	JUL	AUG	SEP	OCT
leaf time	cold time			wet time		young-life time		hot time		mild time (dry time)		leaf time

DOC: 33 - Idioms and Idiomatic Expressions

Idioms are words, phrases or expressions which are commonly used in everyday conversation. They are often metaphorical and make the language more colourful. People use them to express something more vividly and often more briefly. They serve as an image or mental picture. Note that most idiomatic expressions are generally used when speaking informally.

Neo-Khuzdul	English
Targ lo m'arnulu abhâr, hu masagnulu hu	A beard is not a measure of wisdom, it is an extension of it.
Khebab kall ya bekhaz baglul	A cold forge with a rusty hammer. (A lazy person.)
Targ yan labam	A double white beard. (Crazy, demented, out of one's mind, in a confused or befuddled state of mind, senile.)
Khuzd tada zazin ma katakhthizi, ma zatakyili d'asukh galkh	A dwarf that can't endure the bad, will not live to see the good.
Khuzd tada tabjabi d'ahlut yusth mud ashmur diya ins ubnanhu	A dwarf that chooses to take a wife must guard her as his greatest treasure.
Khuzd tada ma tamrazi iglukhul maraza targhu, ta'laji Mahal hefsu	A dwarf that does not keep his beard well kept, shames Mahal Himself.
Khuzd lulkhul mukhuh taktibi udu bakât ges: akhzâr binakhmâ', a'gâl binhanth, abrât binabrân, sagâl binaslâb, ikrêt darâj, ra mahshagama gudr khama buhâ.	A foolish dwarf may be known by six facts: anger without cause, speech without profit, change without progress, inquiry without object, putting trust in a stranger, and mistaking foes for friends.
Khuzd kheldul	A glass dwarf. (A dwarf that appears fair but is weak.)
Targ absâtul khama khuzd absâtul	A healthy beard for a healthy dwarf.
Felak 'ars	A hot chisel (A hard worker. When using a chisel continuously at a speedy pace on hard rock the blade of the chisel will slowly become hot.)
Felak 'ars ma zatabgili	A hot chisel will not rust (It is better to work hard if you wish to avoid any problems.)
Malkûn aslâtul zatamdini zaharu uslukh, nî tazkafi balg.	A hungry hobbit will enter the dragon's den, if it earns him a meal. (A person facing major challenges can do impossible things.)
Targ sigin tathrigi yahu akrâg ra abhâr ya ins hamidî êthârul.	A long beard carries with it honour and wisdom as well as great many crumbs.
Uthak ta'rakhi amsâl ra bulru sakha nurt gajij.	A miner needs both luck and talent to see the next day. (Mining is very dangerous business.)
Kuku sanzigil nê buruta ankhâd.	A Mithril vein never changes colour. (The child is just like his father (admired).)
Khuzd nutuh khulumbujbu abkâtul ra munus fa uthrab gurud	A poor dwarf is either honest and true or a terrible thief.
Rûrîk azafr gaih kuthu tasraji ir-rathkh tahliti agâh.	A secret is like a dove: when it leaves the hand it takes wing.
Liwiz labam.	A white coal. (Out of place, different.)
Gadra allâkh; Mahal hefsu binhas	Against stupidity; Mahal Himself is helpless.
Sullu iglukhul ya bark ra targ	All is well with axe and beard. (Everything is fine.)
Hikhthuzul adrân duhû khama akrâgugkukh.	Always have time for manners
Uthak fundul	An elf miner. (To be particularly bad, objectionable, or egregious.)
Durin zabukuna	As Durin will awake (That is very true; expression of wholehearted agreement.)
Ins Mahal taglibi luknu	As Mahal would speak (it is the truth / it is so)
Azafr sagshari sabhari.	As you teach, you learn.
Binibzil tada kulhu a'rukh sashgamruki.	Avoid that which requires an apology. (If you wish to do something that you believe you will likely have to apologize for, then you should not do it.)
Tabi efsêkheled zê' tanlikhi.	Before the first mirror shines (Very early; before the sun rises)
Uglakhul zall 'alanurt mi garghadar hikulul.	Better an Ale today than a Keg tomorrow
Mahinrid khuzd tada ma tashliki.	Beware the dwarf that does not drink
Damâm uru 'aban.	Blood over stone. (Family is more important than anything.)
Mahkuyula ya habâr inbul.	Born with pointy ears. (Said about a dwarf that has a keen interest in elves.)
Ibkêm biriz hubuk.	Buying free gold (At the drop of a hat - Without any hesitation; instantly.)
Mi targê	By my beard (Tradition saying among all seven houses, used to express surprise or astonishment.)
Ma tasakhi targhu takhfishifi udu rugnhu.	Can't see his beard dangling from his chin. (Unable to see the obvious.)
Barm ni akhi bark.	Chink in one's axe (An area of vulnerability)
Mahtazbadi athâk gamekh ra minam ze'.	Commanding five mines and a pit (Bite off more than one can chew - To take on more responsibility than one can manage.)
Mahtakhishi sharrab rukhsul.	Counting orc skulls (A job, task or other activity that is pleasant – or, by extension, easy or simple.)
Ikhrêsh bilis ni thadul.	Cutting the beryl in one go (To perform above expectations.)

Isrên nimgumul ik-kuk.	Dancing round the vein (Beat about the bush To treat a topic, but omit its main points, often intentionally or to delay or avoid talking about something difficult or unpleasant.)
Ma jalaibhir ni galabî jalaibhir ni muhûl.	Do not be wise in words, be wise in deeds.
M'ikhfishif targzu ni bagd.	Do not dangle your beard in the wind (Stop talking nonsense)
Ma ikhbib zegarzu ni khînunur khabbu.	Do not forge your blade in someone else's furnace. (You shouldn't benefit at someone else's expense.)
Ma ikhjim 'ishmâkh rêlo 'ibdâk ins ma zamahsathhiri buhâ.	Do not give lesser hails nor lesser bows, as you will not gather greater friends. (Never forget to hail and bow properly.)
Ma igshir rukhs d'akhug.	Do not teach an orc to stink (Do not attempt to teach one who is a master in his skill)
L'ikrif garghadarê.	Don't break my keg. (Don't make me lose my patience.)
Ma ikhyij thaiku khama nurt ze' suruj.	Don't close the mine for one empty day (Don't overreact.)
Ma mahikhshi sharrub rakhâs tabi id-'uzghu.	Don't count the orc skulls before the battle. (Don't rely on something before it's finished.)
Ashfukh targu Durin.	Doubting Durin's beard. (To doubt what is obviously correct.)
Sulûkh ma haggunul tatrazîn ai-muzmnatizd.	Dragons don't often rise up on their tail. (One who means to do evil will do their best to not stand out from the group.)
Tesaku uslukh.	Dragon's toy (Basket case - One made powerless or ineffective, as by nerves, panic, or stress.)
Takhlibi mi razûkh.	Drops more than the rain (All thumbs - Clumsy, awkward.)
Aflut rakhâs du mabalgul udu rukhskanâd.	Escape the orcs to be eaten by wargs
Yazârnu inbarathârag taslinîn aktuthurkhu mukhûf.	Even goats fall from cliffs. (Even experts get it wrong.)
Yazârnu sanzigil makhaha nimthurul 'abban.	Even mithril is found among stone (Riches or beauty can come from humble origins.)
Zirun nurt 'ashur.	Everyday iron (Needed, appropriate, essential, or hoped-for and has come to mean perfect, well, absolutely right.)
Astafrai luknu.	Excuse me (asking to pass through) (literally: "may I pass?")
Birashagammi.	Excuse me/ Sorry (literally: "I regret")
Binazrâm hu tada taglibi 'aimu-galikh kuthu tharkh tadishi	Faithless is he who says farewell when the road darkens
Iglukhul ra astû.	Fine, and you ? (literally: "well and you" (directed at one male individual))
Khama lakhmu liwiz.	For a lump of coal (Almost free. Very cheap.)
Biratakhsigi buhhu.	Forming his (own) company (Coming to the age of adulthood 65/75)
Bâhu Nulukhkhazâd.	Friend to the petty-dwarves (Someone who cannot keep a secret.)
Udu khagal du baraz.	From Blue to Red (Covering a complete range; comprehensively. Origins: From Blue Mountains (in the West) to Red Mountains (in the East).)
Birasazriri jazar ni targzu.	Get a knot in your beard (To take offense; to get worked up, aggravated, or annoyed)
d'akhjum 'azg fundul.	Give an elven eye (To display aloofness and disdain.)
Lanz galikh.	Good evening
Galkhishmêr.	Good guarding. (Polite expression to thank someone while indicating lack of interest (commonly used toward vendors to express no interest in their goods))
Masul!	Good luck! (literally: "upon this (meeting), I suggest, let all be lucky! (have luck)!")
Bakn galikh.	Good morning
Zann galikh.	Good night
Shamukh, sakhmi (sakhkhmi) astû galikh.	Greetings, good to see you (again) (Directed at one male individual.)
Shamukh, ra galikh ai-mâ	Hail and well met! (Greetings and may good be upon us)
Shamukh	Hail! (Greetings (can also be used for goodbye))
Zardûn duhû ungat.	Have a wizard handy (Ace in the hole - A hidden or secret strength, or unrevealed advantage.)
Ma kataba felak udu bekhaz.	He doesn't know a chisel from a hammer (Someone who doesn't work / has never worked a day)
Tasakhi akhlatzunsh ak l'uslukh n'azghu.	He sees the hawk on Gundabad, yet not the dragon in his eye. (Focusing on trivial matters while being unable to see that which is more pressing.)
Tarniki katathaki biriz mi hakhâdhu.	He thinks he can mine gold with his teeth. (Someone very conceited.)
Hu k'imrêz rûrîk biradamama.	He who keeps a secret, commits.
Zatagbiri ibriz khama diya.	He would melt the sun in his forge for her. (He would do anything for her.)
Oy umral sanakhiya yadi haggunul?	Hey Love, you come here often? (Directed at one female individual.)
Targhu jalatatani.	His beard withered. (Become afraid.)
Thaikuhu serreja akâk.	His mine is running out of ore. (Going to ruin.)
Abkâtul ins rukhs ra subuk ins rukhskund	Honest as an orc and slow as a warg. (Someone who is a terrible cheat.)
Zûr astu?	How are you ?
Abâd!	I am here (Used when annoucing yourself when entering someones home, litteraly means "bodies (people)" - short form of from "people are here")
L'athriki ib-buh.	I didn't fund the company. (This matter doesn't concern me.)
Ma shubutmi.	I don't understand
Dê garghaddar nunur d'asruj.	I have other kegs to drain. (I have other (more important) things to do.)
Ag zâblagi targê.	I will eat my beard soon (Starving / being very hungry)
Mahzurulmi astû sigin'aimu nusus.	I wish you a save journey
Nî ma katardami gajij ma bintazili d'akhmun.	If you cannot reward, then do not forget to thank.
Burushruka igbulul e.	I'm sorry (polite apology) (literally: "it pains me greatly")
M'imnu Durin	In Durin's name (Tradition Longbeard expression used to praise the line of Durin - literally: "By the name of Durin".)

Ni kurdû barazamrâl'aban.	In the heart of the ruby. (In a very favourable place or situation.)
Uglakhul e bekhaz mi dehar	It is better to be the hammer than the anvil (attack is the best defence)
Ta'rakhi biriz du mahtabrafi biriz.	It needs gold to breed gold
Shelekika hakhd ra targ.	It wets tooth and beard (Said about food which is pleasantly appetising)
Kurusika Mahal shumru.	Joining Mahal's guard (Euphemism for dying or death.)
Kurusika Nulukhkhazâd.	Joining the petty-dwarves (To be become extinct; to die (rude, unrespectful expression))
Jalakanana gangzadkh.	Jump the march line (To arrive just on time.)
Tatahi zai targ mamahrul.	Laughing at a burned beard (Add insult to injury - To further a loss with mockery or indignity; to worsen an unfavorable situation.)
Azafr lakhmu athrur.	Like a chunk of rock (A dime a dozen - Anything that is common, inexpensive, and easy to get or available any where.)
Azafr kasab du Zantulbasn.	Like a pie to a hobbit (One of many)
Lagb hubuk 'uzzanul mi barâk zirik.	Loose tongues are worse than sharp axes.
Mahal tadnani astû, sanzigil tamkhihi astû.	Mahal guide you and mithril find you ("good luck" - often used as a farewell.)
Amuh gargzaharugnar haga khulum.	Make a tavern owner very rich. (Get married.)
Tamahi felak makamthul.	Make the chisel sing (To achieve through instinct or do something without advance preparation.)
Tamahi karâth masarranul.	Making runes dance (He makes runes continue to dance) (To chat idly or generally waste time talking.)
Mukhuh e? / Rum e?	May I ? ("Rum e?" being for the more informal every day speech.)
Mukhuh bekhazu Mahal tamrakhi astû.	May Mahal's hammer shield you (Safe travels)
Mukhuh mabaddakhi ya bunmû Mahal.	May we meet again with the grace of Mahal (Formal goodbye)
Mukhuh targzu satarrigi sigin.	May your beard continue to grow longer (A traditional dwarven blessing)
Mukhuh targzu nê ta'bari bashk.	May your beard never grow thin.
Mahtakdazi.	Melt the gold ("it melts the gold") (Bite the bullet - To endure a painful or unpleasant situation that is unavoidable.)
Igbêr karâk zifîr.	Melting lead shards (A foolish tedious endevour with little profit as a result.)
Agbur zirin gamil ni ikh-khebab.	Melting old iron in the forge. (Renew an old love.)
Manut ithk.	Mining dust. (Sweat caused by hard work.)
Ithk id-'ân.	Mining the river (Barking up the wrong tree - Looking in the wrong place.)
Sanzigil Mahalu khajam du khazâd.	Mithril is Mahals gift to the dwarves
Azgê ganaga dufrukul.	My eye went southward (I fell asleep)
Nê lutur rathukh khuzd.	Never idle are the hands of a dwarf.
Nê ithi zai uslukh kêl.	Never laugh at a live dragon.
Lo sullu batazzinîn luzun.	Not all who wander are lost
Sanzigiltulkh gamil.	Old mithrilsmith (To be especially good or outstanding.)
Iziz ze' ma muha zizîn.	One coin doesn't create a treasury (One sparrow does not make the spring)
Khi muneb guruth biratazriri aktâb ma nekha urasgânu azbâh.	One should be eager to acquire knowledge; it does not come through inheritance.
Izul kuthu thaiku tasgiriki uthak kataba buhâhu kusut.	Only when the mine collapses does the miner know his true friends. (In times of trouble one learns the true nature of his friends.)
Izul kuthu ganagsu undu mud sagnigi uru.	Only when you cannot go under must you go over.
Izul kuthu barafzu tashmari ra dûmzu fuluz muneb samragi.	Only when your family is guarded and your halls are prosperous should you feast. (Family and property above merriment)
Takhjamruki nimgumul felak	Pass around the chisel (he passes around the chisel) (Not wanting to work /being lazy)
Tatsaki maladranlakhâm ya zarsân.	Playing dice with ents (Being extremely patient)
zabirasakhjami.	Please (asking for person to do something - formal) (Literally: "would you grant ?")
kasamhili	Please (asking for person to do something - informal) (Literally: "can you do ?")
idrinat	Please (inviting - "go ahead") (Literally: "proceed")
Biraikni y'umal.	Please (offering - formal) (Literally: a request to "accept with greatest pleasure")
yadi!	Please (offering - informal) (Literally: "here")
Du birâjzur aidâg udu targkhi.	Pulling fish from one’s beard. (Discovering lies.)
Mahtabnisi betâs.	Put away the polish cloth (Placing the polishing tools to the left) (Call it a day - To declare the end of a task.)
Tayidi gairuzirikrathkh ni 'd-dum.	Put the caveclaw in the hall (To create a disturbance and cause trouble.)
M'igyid kuthu fund suluna ini ma mahilkhib heletumunsu hû khulumbujbu.	Rejoice not when an elf falls, but don't rush to pick him up either.
Akhrub inbarathrag barath.	Riding a pink goat. (Full of mischief.)
Surju hikhthuzul katamkhihi khama zalâl galikh ra kassab khulum.	Room can always be found for fine ales and rich pies.
Mahimnin khuzd bahir ma sakhjami danân duhû.	Send a wise dwarf; don’t advise him (Send a wise dwarf; do not give instructions to him).
Imzêl 'aban	Setting a stone in place. (To clarify something, putting emphasis on something.)
Jalaikrif Kheledzâram.	Shatter the glass lake (To screw up/fail in dramatic and ignominious fashion.)
Atkât balâtkhadaru abhâr.	Silence is the fence round wisdom.
Kana tanakhîn labamrazûkh aktu 'urs ra yazârnu sulûkh tanakhîn du nâtizd.	So comes snow after fire and even dragons come to their ends. (Everything will pass in the end.)
Shakhaka ai-targkhi.	Spit on one's beard (He spits on one's beard) (To say things intended to harass; to offer great insult.)
Aban ai-kâmin.	Stone upon earth. (Chances are, the likelihood is (followed by a clause stating what is likely).)
Idrib afbulab zallê.	Stop spilling my ale. (Stop annoying me.)

Sagl mabekh.	Sure (Literally: "no question")
Tazrimi ni biriz ra kibil.	Swimming in gold and silver (To enjoy oneself.)
Galabi banth mukhuh tanni mudtu tutur.	Sworn word may strengthen quaking heart. (When one is at the point of danger and filled with fear a vow made earlier to overcome that danger may allow one to overcome that fear.)
Ihlêt 'utn-mimadkhatadrân.	Taking a man's nap (Sleeping overlong)
Akhminruki astû.	Thank you wholeheartedly (When addressing one male individual.)
Nuhûb batabgili	The beams are rotting. (Having doubts (suspicions).)
Khuzd takrigi zud id-dûm, ma dûm takrigi ikh-khuzd.	The dwarf should honor the halls, not the halls honor the dwarf
Khuzd tada tazrali kuzru undu 'abad zud mahtagnani d'agnud.	The dwarf that wishes a palace under the mountain should start digging.
Khuzd lulkhul ma taktibi amthâg nutuhbujbu khuzd murd takhafi kharshu bark.	The foolish dwarf knows not an insult, neither does a dead dwarf feel the cut of an axe.
Dûm takt	The Halls are silent (All ears - Listening intently; fully focused or awaiting an explanation.)
Bekhaz izul keshekh ins ir-rathkh tada taknirabihu.	The hammer is only as hard as the hand that wields it.
Zantdafat nutut.	The last of the pomade (Blacklock expression - the very end.)
Zabad khulum kuthu khebâbhu tamharîn 'ars ra 'anâghu kall.	The lord is rich when his forges burn hot and his enemies are cold (One can only be truly content when he no longer has worries.)
Agmâl tata belkul ma jalatena, khalâf buzrâ ma rakarôn mi makallul.	The old that is strong does not wither, deep roots are not reached by the frost.
Radm khama amnâs yud ni Itdendûm.	The reward for loyalty is a place in the Hall of Waiting
Jezeru harân himir.	The rope of lies is short. (There is only so much leeway you have when you lie. Once that very short rope runs out, you'll have to face the consequences.)
Yusth gês.	The sixth wife (Apple of discord - Anything causing trouble, discord, or jealousy.)
Birizkukizd lazana asanhu.	Their gold vein has lost its purity. (The child is just like his father (bad).)
Ala rukhs lu zai mekhem.	This orc isn't at the gate. (I can do that later.)
Bata'bani barkhu zai izgil.	Threw his axe at the moon. (Person who gave up.)
Adrân mamahulu sanzigil.	Time is made of mithril.
Adrân safkitabi 'aimukhurb.	Time to pack the pony (Time to leave.)
Khuzd lulkh ku' taglayi huhdu fa ashkâd.	Tis a fool of a dwarf who forgets a wrong or a debt.
'Uglakhul ignêd mi i'bêd.	Tis better to delve then to climb.
D'aznut targkhi mi daigbeshêk.	To comb one's beard with a fishbone. (To prevaricate (avoid telling the truth by not directly answering a question))
D' ahbuk rakhâs.	To free the orcs (To pass gas, fart, break wind)
D'aklut Mahal aglub.	To hear Mahal speak (To become silent; to stop talking.)
D'atus rukhskanâd mi fekham.	To hunt wargs with a fork. (To face danger completely unprepared.)
Targ nama baraj.	To let one's beard kiss the floor (to kneel or bow very low)
D'ankuk zai ibriz.	To look at the sun. (To be extremely ambitious.)
D'amuh uslukh tûdu 'ân'urm.	To make a dragon out of a frog. (To make a big problem out of a small issue.)
Takhjamruki bark.	To pass the axe (he passed the axe) (To escape a situation of responsibility, obligation, or (less frequently) danger.)
Biratajzari hakhud uslukh.	To pull the dragon's tail. (To go into danger.)
D'atruk ethak ni harb.	To push a mine cart in the mud. (To go nowhere.)
D'ayud aidâg ni targkhi	To put fish in one's beard. (To tell lies (talk nonsense).)
D'ahlut sanzigil khama refêsh.	To take mithril for sand. (To think something is more than it is.)
Batashniki targkhi.	To tear one's beard (To express deep grief)
Du bâ'bun kidîz n'id-minam.	To throw gold in the pit. (To waste money.)
Batelega haga higbushulu targhu.	Trimming too much of ones beard (He has trimmed too much of his beard) (Exposing yourself; saying too much)
Akrât bannô hudukh rathakhiksu ihmurul ra karagsu khajumâl dastû.	Trust is a rare treasure, hand it out scarcely and honor those that give it to you
Akrâtul azafr durh.	Trusty as a troll (One who is not trusty at all.)
Tanriti targ.	Turn one's beard (he turns beard) (To express scorn or to disregard.)
Karuf nu' iziz ni ezash ze' muha 'uklat mi mihokh.	Two pieces of coin in one bag make more noise than a hundred.
Fu' ya targzu.	Up with your beard. (Become more cheerful.)
Gabâsh nekha azafr 'azm-markh-muzm ra besenata nidlugul azafr tharkhkund.	Wealth comes like a turtle, and runs away like a fox. (It can take ages to gather wealth, yet spending it all is far too easy.)
Idmi!	Welcome! (A common welcome)
Kulhu saglibi?	What did you say ? (Directed at one male individual)
Kulhu guluba mahadrultû dum bahara mahadrulnu dum.	What he speaks out of the Hall he has learned inside the Hall.
Kulhu adrân?	What is the time ?
Tada ma sasakhi ya 'azâgzu ma mahsa'dadi ya gal'zu.	What you don't see with your eyes, don't invent with your mouth.
Kuthu zall tamdini ib-bund râråk zataznishîn tu.	When ale enters the head, secrets will fly out.
Kûr rukhskanâd tâtîn rakhâs lu thuyur.	Where wargs are orcs are not far behind.
Izrêl ma tamahi khulum akhzud nutuh.	Wishing does not make a poor dwarf rich.
Ya targ hurus	With a singed beard (Narrowly; barely. Usually used in regard to a narrow escape from a disaster.)
Ya fa binuslukh.	With or without dragon (In both good and bad times; whatever may happen)
y'amul	With pleasure (Informal responce to "thank you")

Binrathkhu kibilmant	Without a hand of silver-dust (To be completely penniless)
Khashâm ganagifôn 'uglakhul ya zull mi binzull.	Worries go down better with ale than without. (Common expression from Erebor - If you are going to worry anyway, you might as well drink and worry.)
Azug 'urm.	Wyrm eyes (The same (a roll of two dice in which both show a one).)
Dehersu zirin kall.	You are striking cold iron. (You are attempting to change something that you cannot.)
Ya harmu 'addad.	You are welcome (Formal responce to "thank you" - literally: "with the favor of (the fathers)" / Note: last part "'addad" (fathers) is often ommited.)
Ag zasasmaki rathkh-hund.	You will taste my knuckle soon. (You're going to get a beating soon.)

[TN] *wilt, sag, witherer, to shrivel, to wither, to wilt, to sag*
[TNN] *shell, frame, hull, sheller, to shell (remove the shell or outer covering of something)*
[TNR] *stand, station (place or post occupied by a person), stall (booth), stander, to stand, to stand by (to remain loyal), to stand for (to represent), to stand off (to depart), to stand up, to stand up for (to defend), to stand up to (to bola*
[TNS] *intensity, intense, intensifier, to intensify*
[TNZ] *bug (insect), annoyance, prick, annoyer, to annoy, to prick*
[TR] *hole that connects two ends*
[TRB] *craft, skill, crafter, to craft, to be skilled at (be skilled in)*
[TRD] *watch, watcher, to watch, to keep watch, to (keep) watch over*
[TRG] *beard, stubble, to grow beard*
[TRK] *push, thrust, button, pusher, to push, to thrust, to do push-ups, to upheave (to push or force upwards)*
[TRM] *thirtieth (an equal thirtieth part of a whole), thirty, to divide in thirty pieces, thirty*
[TRN] *beaken*
[TRT] *vigil, vigilance, to be(come) vigilant, to hold a vigil*
[TRTh] *agitation, stir, turbulence, stirring, agitater, to agitate, to stir up (to disturb the quiet)*
[TS] *hunt, game (hunted wild food), hunter, to hunt, to go after, to catch*
[TShK] *correction (rectification), edit (edition), revision, corrector (rectifier), to correct (to rectify), to set right (to redress), to edit, to revise*
[TSK] *game, toy, recreation, recreative, to play a game, to make a toy/game*
[TSL] *settlement, colony, colonisation, settler, to settle, to colonise*
[TSM] *obstruction, clog, barricade, obstructer, to obstruct (to barricade), to clog, to choke (to strangle / to throttle)*
[TSR] *drawing, map, plan (plot), drawer, to draw, to plan (to plot), to map, to mark*
[TTR] *wobble, variation, unstable, unsteady, wobbler, to totter (to wobble), to wag, to vary*
[WDR] *awareness, to become aware (to know)*
[YD] *spot (exact location), haunt (habitually frequented place), placer, to put in place (set in a location)*
[YFL] *allowance, permission, permit, allower, to allow, to permit*
[YM] *yonder place, to get out (to scram)*
[YMR] *departure, exit, departer, to depart*
[YN] *double, folder, to fold*
[YND] *birth, son (Ereb.), to give birth to*
[YRS] *year (lunar)*
[YRZ] *mob, pestle, crusher, to crush, to pound, to subdue completely*
[YSTh] *partner (spouse, mate), bride, to partner (to take a wife), to negotiate terms of marriage*
[YThR] *increase, increaser, to increase, to wax (to grow stronger)*
[YYB] *crawl (very slow speed), crawler, to crawl*
[ZBD] *lord, commandment, king (commander), to lead, to command (to rule/to reign)*
[ZBH] *inheritance, testament, inheriter, to inherit*
[ZBL] *elaborateness, purple, elaborater, to elaborate*
[ZBSh] *club (tool), mace, clubber, to club (tool)*
[ZDG] *argument, dispute, contender, to argue, to contend, to dispute*
[ZDKh] *line, border, straightener, to straighten*
[ZDN] *realm (land), monarchy, quarry, ruler, to rule a realm, to hold (own land)*
[ZDR] *importance (altitude, height), tall, important, high, to make important (make a point)*
[ZFR] *lead (metal), to cover in lead*
[ZGL] *moon, silver-coloured*
[ZGR] *sword, blade, slice, slicer, to slice, to slice through, to slice off*
[ZHD] *respect, respecter, to respect, to humble*
[ZHK] *seal (airtight closure), sealer, to seal (close airtight)*
[ZHR] *building (house), sculpture, home, cozy, homey, builder, to build*
[ZKF] *win, triumph (victory), prize, winner, to win, to lack victory, to defeat utterly, to triumph, to gain, to defeat easily or completely (to throttle), to earn*
[ZKhM] *fortieth (an equal fortieth part of a whole), forty, to divide in forty pieces, forty*
[ZKhS] *lieutenant, instructer, to instruct (military training)*
[ZKN] *obscurity (difficulty to understand), shutter (window cover), shutter (lamp shutter), dim, dimmer, to make dim, to be(come) difficult to understand, to shutter (to close the shutter on a lamp so that its light is hidden)*
[ZL] *memory, past, mind, memorizer, to memorize, to commemorate, to remember (make a memory), to remember (have something come to mind), to keep your mind on*
[ZLD] *empire, dominion*
[ZLF] *sleep, bed, sleeper, to sleep, to wonder, to doze*
[ZLG] *stairway, stairway, to climb a flight of stairs*
[ZLL] *ale (lager / clear ale) (Ereb.), ale (amber / pale ale), drunkenness, drunken, ale drinker, to drink ales, to fuddle*
[ZLM] *west, western, west, to move towards the west (to wester)*
[ZMKh] *shoulder, responsibility, to take on, to be(come) responsible for, to be(come) frail (about a person), to pig-a-back (to carry a person or thing on the shoulders and back)*

[ZML] *tin, to gather (dig for) tin, to melt tin*
[ZMR] *sound (noise), owl (EredM.), ringing, resounding, loud, sounder, to make a noise, to ring (to sound resonantly), to hoot (to make a loud sound)*
[ZN] *female, fertility*
[ZND] *giant, enormity, size, big (large), vast, to grow tall, to size*
[ZNG] *courage, chest (body part), breast, courageous, encourager, to show courage, to encourage, to be(come) brave, to step forward (volunteer)*
[ZNN] *darkness, night, dark maker, to make dark*
[ZNSh] *bird, fowl, flight, flier, to fly*
[ZNT] *hair (one hair), fiber, comb, comber, to comb*
[ZR] *how, asker, to ask*
[ZRB] *writing (manuscript), marriage contract, recorder (writer), to record (write)*
[ZRD] *magic, spell, to do magic, to put a spell on, to protect by magic*
[ZRF] *likeness, model, resembler, to resemble*
[ZRH] *submergence, drowning, drowner, to drown, to sink*
[ZRK] *spike, sharpness, sharp, master, to pierce, to master, to sharpen (to whet)*
[ZRKh] *spire, tower, towerer, to tower*
[ZRL] *wish, longing (desire), claim, claimer, to want, to wish, to desire something better, to claim, to long for*
[ZRM] *lake, resevoir, swim, floater, to swim, to float, to submerge*
[ZRN] *iron, cast (mold), steadfast, stern, serious, severe, grievous, unyielder, to unyield, to yield, to cast (iron)*
[ZRR] *offering, approval, offerer, to offer, to tender (give approval), to receive, to supply*
[ZRS] *tree, brancher, to branch*
[ZRZ] *unnecessary ornamentation, gold-coloured, gildable, gilder, to gild, to improve what is already complete*
[ZSh] *bag, bagger, to place in bag*
[ZShR] *ruin, ravage, wreck, ruiner, to ruin, to wreck, to ravage*
[ZSL] *lonelyness, alone, forsaker, to lone, to detach, to desert utterly, to forsake*
[ZTK] *task, tasker, to task, to be tasked*
[ZYR] *manifestation, manifest, manifester, to be present (to be here / to manifest), to turn up*
[ZZ] *coin, cost, expense, spender, to spend, to afford, to cost, to coin (make coins)*
[ZZN] *foulness (perversion), bad, bad, foul, perverter, to wrong, to pervert, to stray (to wander), to trapess (to wander about in a weary manner)*
[ZZZ] *link (bond) (Ereb.), component, linker, to link*
[Z?] *whole piece, one, single (adj.), to keep in one piece, one*
[?BD] *mountain, mass, body, climber, to climb, to climb over, to climb through, to climb down, to climb up*
[?BF] *heel, nadir, heeler (tilter), to heel (to tilt), to heel (to follow)*
[?BKh] *juncture, seam, juncturer, to juncture*
[?BN] *stone, gem, convincer, to convince, to be(come) convinced, to cast (a violent throw / hurl), to throw (to launch), to dows*
[?BR] *growth, grower, to grow*
[?DD] *father, patron, invention, inventer, to invent, to father*
[?DL] *pump, pumper, to pump*
[?F] *moon cycle (month)*
[?FH] *drop, dew, bead, dripper, to drip*
[?GL] *conversation (talk), declamation, speech, talkative, talker, to talk, to talk openly, to force someone to talk, to tell, to speak badly of someone, to discuss, to inform*
[?GM] *chair, bench, sitter, to sit*
[?GR] *accomplishment, accomplisher, to accomplish (to do / to act / to perform)*
[?GT] *riddle, complexity, riddler, to riddle, to make complex*
[?KhF] *accepted (given) object or action, to accept something that is given (take)*
[?KhT] *core, essence, essential, to dig down*
[?KhZ] *conclusion, full stop (punctuation mark), full stop (punctuation mark), concluder, to conclude, to stifle*
[?KR] *part, ingredient, parter, to part, to split (in pieces), to involve*
[?KS] *relevance*
[?KSh] *surprise, astonishment, shock, surpriser, to surprise, to astonish, to stun (to surprise or shock greatly)*
[?KT] *face, exterior, mask, exterior, facer, to face, to mask*
[?L] *stream, flow (movement of fluid), mellifluous, to wade*
[?LH] *indication, indicator, to indicate*
[?LJ] *cheek, shame, shamer, to shame, to bring shame upon*
[?LZ] *rise, riser, to rise (to lift), to raise (to lift up)*
[?M] *passage, voyage, passager, to passage*
[?MD] *mother, well (spa), nurishment, nurisher, to nurish*
[?MG] *siege, plague, sieger, to siege, to plague*
[?MKh] *defiance, defiant, defier, to defy*
[?N] *river, brook, flow (rate of fluid movement), to flow*
[?NG] *enemy, to face an enemy, to make an enemy*
[?NJ] *toe, extremity, thumper, to thump*
[?RD] *mountain (Ereb.)*
[?RKh] *need, urgency, desire, urgent, to need, to desire*
[?RM] *worm, slide, wriggler, to wriggle*
[?RN] *measurement, amount, degree, measurer, to measure*
[?RR] *horror, revulsion, horrifier, to horrify, to revulse*
[?RS] *fire, heat (warmth), hot, kindler, to kindle, to start a fire, to warm up, to be dead set on, to fluster*
[?Sh] *displeasure, displeaser, to displease*
[?T] *being, to be (explicit or emphasized)*
[?TM] *breath, gasp, gasper, to breath, to gasp, to inhale, to exhale, to pant*
[?TN] *man, influence, weak willed, influencer, to influence easily, to be(come) ill*
[?YK] *solitude (Ereb.), solitary, lonely*
[?Z] *few, reduction, reducer, to reduce*
[?ZG] *eye, opinion, gaze (stare), gazer, to gaze at (to stare), to judge (negative opinion), to form an opinion*
[?ZGh] *war, hostility, battle, warrior, to wage war (to battle)*
[?ZH] *sea, salt, mariner, to sail*
[?ZM] *scale (of animal), coater, to coat*
[?ZN] *shadow (evil), evil doer, to do evil*

*DOC: 36 - Adverbs**

Adverb Types:	***Typical Radical Structure***	***Example***
Contemporary Adverb of Manner	CiCCal	milmal (quickly)
Adverb of Time (Now, Today, Yesterday)	hiCCuCul	hignunul (early)
Adverb of Place (Outside, inside, up, upstairs, down, downstairs…)	niCCuCul	nibzurul (below)
Adverb indicating Degree (Very, nearly, a lot, often, more, in addition)	haCCuCul	habkulul (less)
Archaic Adverb of Manner (like this, in this way, quickly, slowly, presently, cleverly, easily, etc.. / Also in this group are conjunctive adverbs*.)	iCCuCul	iblumul (softly)
Adverb of Direction (backwards, northwards (-wards), etc..)	duCCuCul	dufrukul (southward)
Irregular Adverb (no specific form)	Irregular	gagin (again)

Contemporary vs Archaic Adverb of Manner:

Though both types of adverbs are still considered correct, the contemporary form has become the everyday spoken form , while the archaic is used mainly in proverbs, official documents or very formal situations.

** For more information on conjuntive adverbs can be found on the relative documentation on the topic.*

DOC: 37 - Perfect and Imperfect

Perfect:

In Semtic languages the Perfect conveys actions that have been completed (ex: I drank), while the Imperfect conveys information on actions that are still to start or are in progress (ex: I am drinking).
In Neo-Khuzdul these forms, in meaning, are not comparable to the Semitic perfect. These two main tenses are related to dependability rather than time.
The Neo-Khuzdul "perfect" is as such not a past tense, though it can convey actions that have happened in the past, it does not necessarily refer to completed action.
It refers rather to actions which can be considered as dependable facts, as opposed to evolving and uncertain realities.
These might be statements about the past, such as one might find in a chronicle, or statements of general truth.
Examples are: Izgil taraza zann ra zann: "The Moon rises every night" (literally "night and night", sc. one night after another) or Uslukh sharaga "A dragon lies" — i.e., comtinually, compulsively, and dependably.
It's the sort of form that would be used in an aphorism. It could even be used to describe events that will predictably and with certainty take place in the future.
An example of this would be: Durin zabakana "Durin will awake" — to the Dwarves, an undoubted fact about the future.

How to Form the Perfect?

One takes the Perfect root form of the verb (either CaCaC, CuCuC, CeCeC or CeCaC)* and adds the suffix of the personal form.

** More information on the Perfect root forms can be found in the documentation on Verb Forms.*

Example: Zarab + mi (Perfect root form of "to write" + 1st person singular suffix)

Imperfect:

The Neo-Khuzdul Imperfect refers, not to incomplete action, but to vividly imagined action — either because one sees it directly in front of one, or imagines it as something which is playing out in the mind's eye. It has no regard to tense.
A Dwarvish storyteller would use this form to describe events he wanted his audience to vicariously experience, regardless of whether they had happened in the distant past or were prophecies of the future.
It can also be used to describe an ongoing action that is taking place at the present: Durin tazlifi "Durin is (now) sleeping.
" Durin zalafa could mean "Durin typically sleeps, as a matter of course" and would be a rather insulting thing to say to a dwarf; though in the right context, it could mean "Durin slept," as an historical fact.

How to Form the Imperfect?

One takes the Imperfect root form of the verb (either CCaC or CCiC)* and adds the prefix and suffix of the personal form.

** More information on the Imperfect root forms can be found in the documentation on Verb Forms.*

Example: a + zrab + i (1st person singular prefix + Imperfect root form of "to write" + 1st person singular suffix)

Note on Practical Translations:

Seeing that both Perfect and Imperfect can indeed be used for past, present and future, the effective translation will also depend on the context and any accompanying words in the same sentence.
This can create challenges to provide a direct translation when there is no context information or when only the conjugated form is provided.
Generally in such cases, as a matter of convenience, the perfect form is translated as a past tense, while the imperfect is translated as a present tense.
Note however that when context is provided or the accompanying words are made clear the translation might need to be revised to fit the actual tense better.

		They (more than one female) are writing			ENGLISH

Future Tense:

Neo-Khuzdul does not have a specific future tense. To indicate an action will take place in the future the prefix "za-" is added to the imperfect.
Example: He will write: "zatazrabi".
To express possibility the prefix "ka-" is added to the imperfect. Example: He can write: "katazrabi"
The prefixes za- and ka- can also work in the perfect tense (indicated "would" and "could", instead of "will" and "can"); Example: He would write: "kazaraba"

DOC: 38 - Imperative and Jussive

Imperative:

Allows speakers to express commands, orders or non-disputable advice (primary addressed to the 2nd person).
The imperative is a grammatical mood that forms commands or requests, including the giving of prohibition or permission, or any other kind of exhortation.
In Khuzdul the imperative is used as an unmistakable form for direct commands and orders.
As such when translated to English the command is often accompanied by an exclamation mark, to indicate the commanding mood.
An example of a verb in the imperative mood in Khuzdul is: "iglib" ("speak!").

How to Form the Imperative?
When using the Imperative you must ask yourself the question if you are addressing one person or several.
In case you are address one individual the form "iCCiC" is used.
While when addressing more than one individual the form "iCCiCi" is used (adding an "i" to the singular form).

Jussive:

In many languages the Jussive is a third person imperative, in Khuzdul however this form can apply to all persons, both plural and singular.
The Jussive Mood is a grammatical mood of verbs to offer suggestions, recomendations, desires or pleads. Or is used when appealing to the object's duties and obligations.
It is considered a very polite form, not used for hard demands or orders (where we would use the imperative), but rather for gentle suggestions.
It is also the standard form used when a desire is accompanied by "tada" (that) (example: "I suggest that...").
In earlier times the Jussive form used the prefix "ai-" (upon) to express an even more courteous plead,
By the third age this form ("ai-...") has become largely archaic and is rarely used, with the exception of official or (overy polite) speeches.
It is believed the "ai-" (upon) form finds it's origin in the concept "upon our meeting, I suggest that ... / upon this, I suggest that... ".
The most well known example of the jussive form is "shamukh", literally meaning "let all greet".
The Jussive form also has an infinitive form ("shamukh" being a good example of it), which is typically used in formal occasions to invite all that are gathered to proceed or join in action.

How to Form the Jussive?
The Jussive uses the same personal forms conjugations as seen in the Perfect tense.
One takes the Jussive root form of the verb (always CaCuC)* and adds the suffix of the personal form.
**for triradical verbs ("CaCu" for biradical verbs)*

Passive Jussive

In Khuzdul the Jussive is commonly an active form; example: "Let it climb", yet it can also be expressed as a passive form "Let it be climbed".
To form the Passive Jussive one adds "ma-" as a prefix to the Jussive base, replacing "ai-".
Example: "ai-faluka" (let him hew) vs "mafaluka" (let it be hewed).

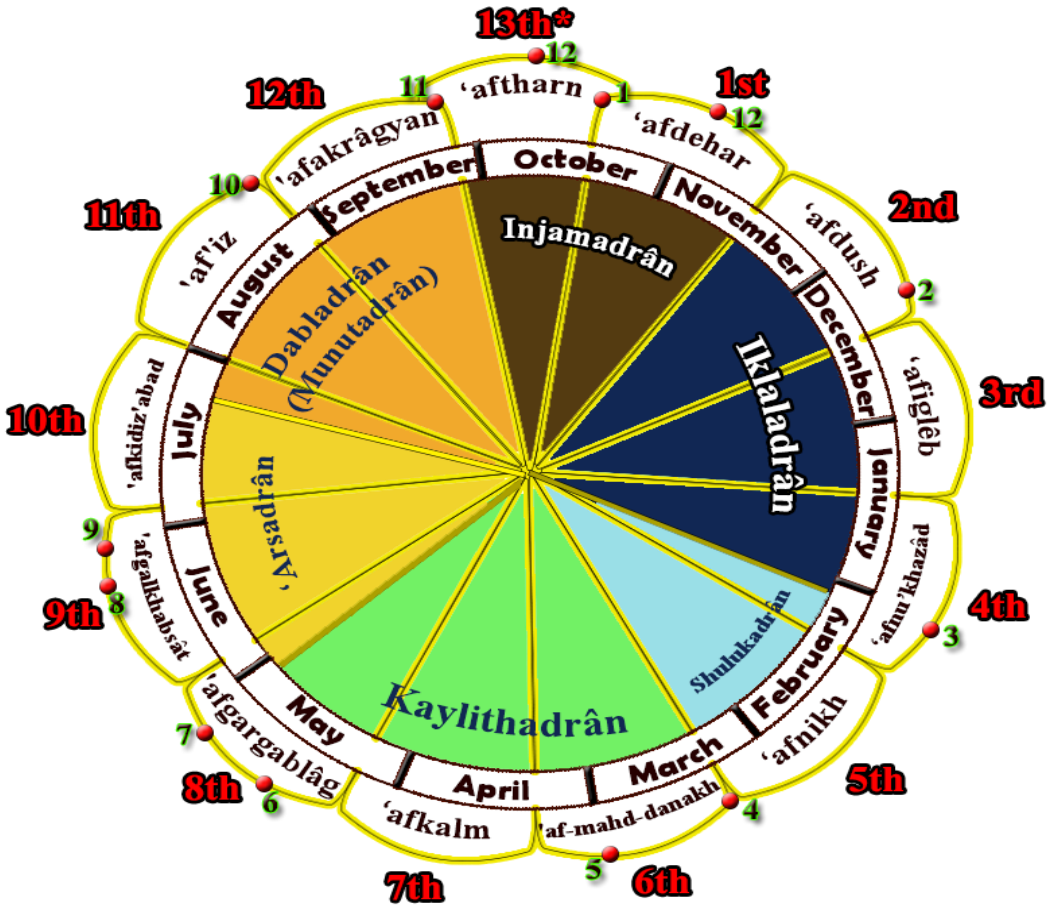
Khuzdul is the language of the Dwarves in J.R.R. Tolkien's legendarium set in Middle-earth.
For these Neo-khuzdul documents both the original Tolkien material, David Salo's Neo-Khuzdul and Khuzdul used in Turbine's LoTRO have been used.
This is my personal interpretation of Tolkien's dwarvish language, I do not claim this content to be canon.
This document is an interpretation of Tolkien's work and any Khuzdul related material, all rights are reserved for their proper owners.
Any reference to The Lord of the Rings Online or any other brand name is not meant to claim ownership of material.

DOC: 39 - Seasons and Feasts



General Info:

The Dwarven Calendar is a lunar calendar, each month starting on a new moon. 7 out of 19 years have 13 months (13 month year: *"fantêrâs"*), while the rest have 12 months (12 month year: *"bashkêrâs"*).

A 19 year cycle is called a "tagersasekhanrât" Each year consists of 5 months with 28 days (months 1, 3, 6, 8 and 10) and 7 months with 29 days (months 2, 4, 5, 7, 9, 11 and 12).
The 13th month always has 27 days. A dwarven year has thus either 343 days or 370 days. The dwarven new year falls on the first day of the last moon of autumn on the threshold of Winter.

The Dwarven seasons are counted somewhat differently than our modern day seasons.
The dwarves mark 6 seasons instead of 4, as a season is seen as a period spanning 2 or 3 moons.

Yet, certain occurances marked the start of the seasons: * Iklaladrân (Winter): From the sunrise of the 19th day of the first month (18 days after the Dwarven New Year) [October/November] till sunset of Forge Day Fest [January/February].

* Spring (shulukadrân and kêlithadrân): the 19th day of the 4th month marked the yearly Forge Day Fest, which lasted from sunrise till sunset.
At sunset the last fall of the hammer marked the end of winter.
The sunrise on the day after Forge Day Fest marked the start of shulukadrân (wet-season - referring to the melting of the snow), which lasted till the sunset of the last day of the 5th month [January/February till February/March].
The majority of Longbeards, Firebeards, Stiffbeard and Ironfists (clans that have Halls in more colder climates) often consider shulukadrân to still be part of winter.

The sunrise on the first day of the 6th month marked the start of kêlithadrân (literally: "young-life time" - usually translated as "spring"), it also marked the start of the 20-day-long Blessed Green Feast (spring festival).
Kêlithadrân lasted till the sunset on the last day of Harnkegger Fest, a 10-day-long festival that ended on the 19th day of 8th month.

* 'Arsadrân (Summer): The sunrise on the day after Harnkegger fest usually marked the beginning of 'arsadrân ("hot time"). 'Arsadrân lasted till sunset on the 19th day of the 10th month.

* *Dabladrân* ("mild time" - Summer/Autumn):
Sunrise on the 20th day of the 10th month marked "dabladrân" ("mild time"), which lasted till the sunset of the last day of the 11th month at which time the "Night of the Kill" (a yearly ceremony) was held.
The majority of Stonefoots, Blacklocks and Broadbeams (clans that have Halls in more temperate climates) often consider dabladrân to still be part of summer.
In these Halls dabladrân is referred to as "munutadrân" ("dry time").

* Injamadrân ("leaf time" - Autumn) started on the first day of the 12th month. The season lasted either 1 or 2 months (depending if the year consisted of 12 or 13 months).
The Treasures of the Land Fest (Harvest Fest), which starts at the last day of the 12th month marks the years end for 12 years out of each 19 year cycle. In such years The Dwarven New Year and Durin's Day (Longbeards) occur within the harvest fest.

Information on Holidays and Feasts

1	Dwarven New Year ("Êrâs Nar")- For the Longbeards referred to as Durin's Day ("Nurtu Durin") when the sun and the moon are in the sky together at the same time. Note: Dwarven New Year and Durin's Day are usually two days apart as a new moon cannot be seen together with the sun, hence the first thin sliver of the crescent moon (2 days after Dwarven New Year) is considered Durin's Day.
2	Day of the Burned ("Nurtu Mamahrân"). Held yearly on the 27th of 'afdush (early/mid December). A sober day, in which feasts are not held and songs are not sung, and most dwarves spend the day telling tales with family and friends, remembering the dead of the Battle of Azanulbizar (which happened on the 27th of 'afdush).
3	Forge Day Fest ("Khebabnurtamrâg") held on the 19th of 'afnu'khazâd, marks the end of the winter ("Iklaladrân") in most Northern Halls. As its name suggests, sacred to smiths. Each Dwarven smith is required to forge a large, exquisite item in honor of this day. Some of the greatest Dwarven weapons (most notably the Durin's Axe) were reportedly forged on this day. The meal for this feast day is quite heavy; dark bread, mutton, and mushrooms. Likewise the Dwarven spirits on this day are thick, black ales. On this day the dwarves, in tribute to Mahal, forge a great work. It is common in many clans to hold a great feast after hours of crafting and working in the forges, where all display their creations. The work receiving the highest praise is often gifted to the Lord of the Hall.
4	Start of the Blessed Green Fest ("mamahduldanakhamrâg"), also named "Spring Fest", starts on the 1st of 'af-mahd-danakh. The first day of the festival marks the cutting of the springbarley. Barley which had been sown during the first day of the harvest festival, 6 or 7 months earlier. It is noted that in the North, the spring festival is usualy held 2, sometimes even 3 weeks later, due to the fact that the springbarley is not ready to be cut in the colder climate. A tradition of this feast is to carry a fresh straw of spring barley with you. Dwarrow woman are known to wear it in their hair while dwarrow males often carry it in their pockets. "The carrying of the straw", is a dwarven tradition which, according to legend, dates back to the first Dwarrow Spring Festival, held at the beginning of the Second Age. During this first festival, which the dwarves held in honor of Yavanna (the wife of their creator Mahal), Yavanna gave the fathers of the dwarves each a straw of spring barley. This served to remind them of their dependence of nature. Many years later during the war of the last alliance at The Battle of Dagorlad (3434 Second Age), a regiment of dwarves lead by dwarven general Barin were carrying straws of spring barley in their pockets, which they had been offered during the start of the spring festival some time earlier. Though a vast amount of soldiers died, not a single one of the generals regiment perished. Since then it is considered good luck by most dwarves to carry a straw of spring barley in your pocket during the time of the spring festival.
5	End of the Blessed Green Fest, ends on the 20th of 'af-mahd-danakh. The last day of mamahduldanakhamrâg notes the annual pony race between Thorin's Halls and Needlehole in the Westfarthing, known by many dwarves and hobbits as "The Broken Bone Race". The pony race, first held in the year 2903 TA, starts traditionally at foredawn. The race is well known for its difficult conditions, the majority of the riders never reaching Needlehole.
6	Start of Harnkegger Fest ("garg-buzrâmrâg") also knows and "Deep Ale Fest" on the 9th of ''afgargablâg. This holiday reflects the love of hard work the Dwarves have, followed by equally hard play. The holiday is named after the ceremonial position of the Harnkegger, which is given to a Dwarf who works conspicuously hard between spring festival and this holiday. The Harnkegger dons the traditional heavy boots and red garterbelt and gets the honor of tapping and sampling the first barrel of summer ale. Thus begins a 10 day festival of drinking ale, eating enormous amounts of food, gaming contests, and general merriment. On the last day, votes are taken and awards given for the best ale. The Dwarves work without cease from Blessed Green Fest till Harnkegger Fest, so they can take full advantage of this holiday. Though this was originally a Dwarf feast of Ered Luin, many other Dwarrow nations have adopted it.
7	End of Harnkegger Fest ("gargbuzrâmrâg") on the 19th of ''afgargablâg
8	Start of the Firebeard Midsummer Fest ("Zudraibrizamrâg") also known as "High Sun Feast", is a four day feast that starts on the 19th of 'afgalkhabsât. It is traditionally held at Tumunzahar, the main Hall of the Firebeards in the Blue Mountains, though throughout history it's location has varied. Though a Firebeard feast, it is a tradition that the Kings of the other six clans are invited (together with many of their following, crafters and traders) and gifts are exchanged. The first day is known as "Nurtu Galabi" (Day of Words), as the Kings of the seven houses usually discuss important matters of their Kingdoms in private. At the evening of Nurtu Galabi the celebrations start with a grand feast. The second day of the celebrations, known as "Nurtu Asjâr" (Day of Trade), brings together the crafters and traders of the seven clans in a grand dwarven fayre. The evening of this day marks the end of the dwarven fayre and the start of another feast. The third day, "Nurtu Finit" (Wide Day), is a day of much eating and drinking. The name of this day likely originates from the size of ones belt at the end of it. The last day of the feast, "Nurtu Zarkh" (Spire Day), marks a more solemn day in which the seven clans thank Mahal and Sulladad at the Spire of Tumunzahar.
9	End of the four day Firebeard Midsummer Fest ("Zudraibrizamrâg") on the 23rd of 'afgalkhabsât.
10	The Night of the Kill ("Zannu Adrâf"), on the evening of the last day of 'af'iz. Starts on the last evening of 'af'iz and ends at Foredawn the next day. The Night traditionally starts with a fellowship of Dwarves heading out early in the evening, set out to hunt and kill a deer or boar. The meat and hides are donated, later that night, to dwarves that are less fortunate. In comparison to most other dwarven feasts no heavy ales nor feast meals are to be had, instead most dwarves drink a simple Mead and eat meager rations on this eve. When the fellowship returns it is noted to pay homage to those dwarves that have gone to the Halls of Waiting.
11	Start of the Treasures of the Land Fest ("gabashzudnamrâg"), also known as Harvest Fest - starts on the last day of 'afakrâgyan.
12	End of the Treasures of the Land Fest ("gabashzudnamrâg"), ends on 16th of 'aftharn - (only if 'afakrâgyan is followed by 'aftharn -otherwise 16th of 'afdehar).

DOC: 40 - Place Names

Khuzdul	*ENGLISH*
'Abbun'ulkhad	*One time the Broadbeam capital in the White Mountains during the Third Age.*
Algânhund	*Amon Anwar (Eilenaer / Halifirien)*
Amradulhirsîn	*Gorgoroth*
'Azanulbizar	*Dimrill Dale*
'Azanulzeleg	*Dimrill Stair*
'Azn'abbad	*Mountains of Shadow (Ephel Dúath)*
Azsâlul'abad	*Lonely Mountain (see 'Urd and 'Urd'ëk)*
Babânburmu	*Cirith Ungol (Spider's cleft)*
Bâha-zunsh-hund	*Ravenhill*
Balbûnzudnu	*Forochel*
Baraz'abbad	*Red Mountains (Orocarni)*
Barazinbar	*Caradhras (Redhorn)*
Baraztûm	*"The Red Halls", capitol of the Blacklocks at Gabil Barazbund in the Red Mountains. (often written "barazdûm" in CK)*
Basnbizar	*Dale (also named by its shortened form "Bizar")*
Binzarsbuzru	*Dagorlad*
Bundushathûr	*Fanuidhol (Cloudy Head)*
Buzrâburmubizar	*Rivendell*
Buzrâtumunbizar	*Deeping-Coomb*
Buzrâzadkhbizar	*Harrowdale*
Danakhdilkhîn	*Parth Galen*
Danakhkhizdîn	*Green Dwarf-Place (Grey Mountain settlement - often erroneously written as Danuk-khizdîn)*
Danakhuslukh	*Green Dragon*
Dumsabad	*Mount Doom*
Durinul'aban	*Durin's Stone*
Durinulzarakh	*Durin's Tower*
Dushtarbzarâs	*Dimholt*
Fahamfundsilfîn	*Forlond*
Fant'ân	*Anduin*
Fantmuthurdilkhîn	*Field of Celebrant*
Farakfundsilfîn	*Harlond*
Fask'abad	*Dwimorberg*
Felakuldushtûm	*Blacklock citadel close to Baraztûm (often written "Felakuldushdûm" in CK)*
Finit'ainîn	*Minhiriath*
Fundgathol	*Ost-in-Edhil*
Gabil Barazbund	*Great Red Head (Tallest Mountains of the Red Mountains in the East)*
Gabil'âh	*Sirion*
Gabil'âzah	*Belegaer*
Gabildûm	*"The Great Halls", the ruined ancestral halls of the Stonefoots.*
Gabilgathol	*Belegost*
Gabiltharkhbinnat	*Great Dwarf Road ("Great Road without End")*
Gabiluslun	*Sarn Gebir*
Gabilzahar	*"Great Home", the ancestral hall and capital of the Stiffbeards.*
Gairurukhsgirîn	*Goblin-town*
Galtzirsîn	*Everholt*
Gamil'ân'am	*Old Ford*
Gamilgathol	*Aldburg*
Gamzu'zagh'abad	*Mount Gram*
Gumzubedakzudnu	*Drúwaith Iaur*
Gundabad	*"Delved Mountain", Holy mountain of all Dwarves.*
Guthluthatûr	*Osgiliath*
Haft'ân	*Limlight*
Hars'abbad	*Ash Mountains (Ered Lithui)*
Harsbuzru	*Lithlad*
Henafhakhâd	*Irensaga*
Hundshimrîn	*Dunland*
I'bedmujdzillîn	*Ivy Bush Inn*
Ibrizbuzru	*Harad*
Ibrizfundsilfîn	*Edhellond*
Ikhsêgshathr'abbad	*Mountains of Angmar*
Iklalmalszâram	*Nen Hithoel*
Iklalzudrahanâd	*Coldfells*
Iklêthund	*Amon Lhaw*
Imhdum	*Creating Hall (The legendary Hall were Mahal created the seven fathers)*
Imhêrzudnu	*Far Harad*
Imlêktharkh	*Tharbad*
Ishkêb'aimukhurb	*The Prancing Pony*
Ishtherhanâd	*Emyn Muil*
Iskh-hund	*Amon Hen*
Itdendûm	*Halls of Waiting*
Kafhshâlak	*Sea of Núrnen*
Karthzarszudnu	*Trollshaws*
Khagal'abbad	*Blue Mountains (Ered Luin)*
Khagalbundzirak	*Mindolluin*
Khagszunshshâlak	*Swanfleet*
Khamarzudûn	*Brown Lands*
Kharbânzudnu	*Rohan*
Khazad-dûm	*Dwarrowdelf*
Kheled-dûm	*"The Glass Halls", capitol of the Ironfists in the Red Mountains.*
Kheledzâram	*Mirrormere*
Khurbuzbadlibrîn	*Folde*
Kidzulnaimudaig	*Golden Perch*
Labam'abbad	*White Mountains (Ered Nimrais)*
Labamrazûkhinbar	*Starkhorn*
Labamzarszudnu	*Gondor*
Lanzhindîn	*Emyn Uial (Hills of Evendim)*
Lanzulkhudzâram	*Lake Evendim*
Libokhagâr	*Menegroth*
Mahal-kuk-khizdîn	*Dwarf-place where the Creator shaped ore (Grey Mountain settlement - often erroneously written as Mahalkukhizdîn)*
Malasul'abbad	*Misty Mountains (Hithaeglir)*
Marânzudnu	*Dorwinion*
Masharbulhund	*Dol Baran*
Mazaslulbidginzillîn	*Forsaken Inn*
Mekhem'ul	*Sirannon*
Mekhem'uluslun	*Stair Falls*
Mirdinhanadlibrîn	*Barrow Downs*
Muthurkâmin	*Middle-Earth*
Muthurzudnu	*Enedwaith*
Naragazrâd'am	*Morgul Pass*
Naraggund	*The capitol of the Stonefoots in the Red Mountains*
Naragmekhemhakhâd	*Towers of Teeth*
Naragzirsîn	*Black Wood (Eryn Vorn)*
Nargûn	*Mordor (also known as Naragzudnu)*
Narsilfîn	*Lond Daer Enedh (Vinyalondë)*
Natinbar	*Methedras*
Niddînaban	*Brotherhood of Stone (an exclusive guild-like organization for dwarven engineers)*
Nidinyindîn	*Rhûn*
Nidinyindin'âzah	*Sea of Rhûn*
Nudbinzars	*East Bight*
Nudkharbanlibrîn	*Eastfold*
Nututkhur	*Last Bridge*
Ramekhrumûkh	*Shire*
Refeshbuzruzudûn	*Khand*
Runulfulzillîn	*Runulf's Tavern*
Shalatbidginzillîn	*Floating Log Inn*
Shelobulgairu	*Torech Ungol (Shelob's Lair)*
Sigini'bêd	*Andrath*

Siginuslukhbizar *Withered Heath*
Siginzâram *Long Lake*
Taznân *The Void*
Thafar'abbad *Grey Mountains (Ered Mithrin)*
Thatrguzyu *Numenor*
Thikilgundu *Steel Hall (the largest Hall of the Grey Mountains - also known as "Thakalgund")*
Thorinuldûm *Thorin's Halls (also known as Thorinutumhu by many dwarves of the Blue Mountains)*
Tumunumahâl *Hollow of the Creator (7 tiered complex within the caverns of Akhuzdah - former capitol of the Blacklocks - often erroneously written as Tumunamahal)*
Tumunzahar *Nogrod*
'Uhan-zars-shâlat *Nindalf (Wetwang)*
'Urd *Local variant of "The Lonely Mountain", used mainly by those of the mountain itself (referring to the mountain itself)*
'Urdamdûm *One time the Stonefoot capital in Rûrîk duing the Second Age*
'Urd'êk *Lonely Mountain (referring to the Halls within the mountain)*
'Urruburmu *Cirith Gorgor*
'Usjarazhâr *Home of Greatest Trade (Ironfist trading settlement on the Great Dwarf Road)*
Uslun'ân *Lhûn (Lune)*
Uslun'ânmafantul *Gulf of Lune*
Uzbadtharâg *Argonath*
Zaram'itnîn *Laketown (Esgaroth)*
Zeleg'ubraz *Golden Stair (Dwarven-citadel in the Grey Mountains - former capitol of the Longbeards)*
Zelemkharbanlibrîn *Westfold*
Zigilgundu *Silver-coloured Hall (Isolated Longbeard dwarven mine/settlement in Forochel - often erroneously written as Zigilgund)*
Zigiljabâl *Silver-coloured Visions (White Mountain settlement)*
Zirakdush *"The Silver Dark", guarded pass to the North of Baraztûm, leading to the Northern Red Mountains*
Zirakzigil *Celebdil (Silvertine)*
Zirikguzyu *Tol Brandir*
Zirin'ân *Isen*
Zirin'ân'am *Isenmouthe*
Zirin'ânzarakh *Isengard*
Zirinhanâd *Iron Hills (also called "Urâd Zirnul", especially with those from the Lonely Mountain)*
Zirsinbasnhanâd *Firienholt*
Zirsîntharkh *Forest Road (road originally connecting Khazad-dûm with the mining colonies in the Lonely Mountain and the Iron Hills)*
Zudkhân *Glanduin*
Zudrâfundzarakh *Elostirion*
Zudrâgundu *Small Longbeard hall built in one of the tallest peaks of the Southern Misty Mountains (locally named Zudrugund)*
Zundmarazkhulshilkîn *Ettenmoors*

Locations in Moria (almost entirely from LoTRO)

Khuzdul	*ENGLISH*
'Abangulbu	*The Stone Council*
Abzâg Durinul	*Durin's Bane*
Abzârbuzrâ	*The Deep Descent*
Admâs Durinul	*Durin's Court*
Akâkzahar	*The Ore-house*
Amdâmul-kharaf	*Comfortable Lodge (MV written as "Mudmul-charâf")*
Amdâmul-zirâk	*Comfortable Masters (MV written as "Mudmulzarâk")*
Amdân Durinul	*Durin's Threshold*
Anazârmekhem	*Stewards Gate*

Khuzdul is the language of the Dwarves in J.R.R. Tolkien's legendarium set in Middle-earth.
For these Neo-khuzdul documents both the original Tolkien material, David Salo's Neo-Khuzdul and Khuzdul used in Turbine's LoTRO have been used.
This is my personal interpretation of Tolkien's dwarvish language, I do not claim this content to be canon.
This document is an interpretation of Tolkien's work and any Khuzdul related material, all rights are reserved for their proper owners.
Any reference to The Lord of the Rings Online or any other brand name is not meant to claim ownership of material.

DOC: 41 - Khuzdul Sentences

Types of sentences

Equational sentence - a sentence without a verb.
Examples:
"Khuzd 'Urdul" - The dwarf is Ereborian.
Although this sentence contains a verb in English, it doesn't in Khuzdul.
Since Khuzdul doesn't use a present-tense form of "to be," this is a verbless sentence consisting only of a noun and adjective.
It literally translates as "Dwarf Ereborian"; the "is" is understood.

"Khazâd gem ni barafê." - There are three dwarves in my family.
Again, the English translation contains a verb ("are"), but the Khuzdul doesn't.
It literally translates as "Three dwarves in my family ." Since no present-tense form of "to be" is used in such cases, "Three dwarves [are] in my family " is implied.

Verbal sentence - a sentence with a verb.
Example:
Khuzd mahkuyula ni 'Urd- The dwarf was born in Erebor.

Subject and predicate

Subject
The subject ("khami") is what the sentence is talking about.
It could be a noun (the dwarf; Erebor; Thorin), pronoun (I; he; they), or noun phrase (the gold miner; a long book).
"Khami" literally means "an element of purpose", so you can think of the subject as the whole purpose of the sentence, the key element.

Predicate
The predicate ("zadari") tells us something about the subject.
"Zadari"means "an element of importance", so you can think of the predicate as delivering important news about the subject.
It may be an adjective (happy), verb (woke up), or noun (dwarf).

Here are some simple examples. The **subject is in bold**, and the predicate is underlined:

The dwarf is Ereborian. - "**Khuzd** 'Urdul"
The subject is a noun, and the predicate is an adjective.

My father is a Lord. - "'**Adadê** Uzbad"
The subject is a noun phrase (a genitive construction), and the predicate is a noun.

He is tall. - "**Hu** zidir"
The subject is a pronoun, and the predicate is an adjective.

General Word Order

In sentences with a verb, Khuzdul usually follows a Subject-Verb-Object (SVO) order, like English.
Though sometimes (especially true with forming questions) it uses a Verb- Subject-Object (VSO) order.
Khuzdul can even use an Object-Subject-Verb (OSV) structure in certain literary styles, such as poetry.

Examples (Subject in bold / Verb underlined / Object in Italic):

A) *Standard sentences: SVO in English / SVO in Khzudul*

My father drinks *beer*
'adadê sheleka *zall*
[**father-my** drink-he *beer*]

B) *Questions: SVO in English / VSO in Khuzdul (SVO also accepted)*

Does **my father** drink *beer* ?
Sheleka **'adadê** *zall* ? (also accepted 'adadê sheleka zall? - my father drinks beer?)
[drink-he **father-my** *beer?*]

C) *Poetic: OSV in English / OSV in Khuzdul*

Eru **we** worship thee.
Sulladad **Magrifi** astu.
[*all-father* **worship-we** you(m)]

In case the only subject in the sentence is a pronoun (I; he; they), for instance "we drink",
a separate pronoun indicating "we" will always be omitted as it is evident from the conjugation ("shelekmâ") that it is "we" that is doing the action.
In such cases the verb and subject are one in Khuzdul.

Phrase word order

Within the noun phrase, the following modifiers occur before or after the head noun, dependant on the type of modifier:
Those with different word order than English are marked in red, others in green (identical) or orange (sometimes identical).

adjective (red house vs house red) *- more details below.*
English: red house / Neo-Khuzdul: zahar baraz (house red)
Exception: titles follow a noun/adjective order, for instance: "Sigin-tarâg" (literally: "long-beards")

determiner (this house vs house this)
English: this house / Neo-Khuzdul: 'ala zahar (this house) or zahar 'ala (house this) - both are accepted.

numeral (two houses vs houses two)
English: two houses / Neo-Khuzdul: zahhar nu' (houses two)

possessor (my house vs house my)
English: my house / Neo-Khuzdul: zaharê (housemy) - Neo-Khuzdul will always merge noun and possessor into one. In case joining elements are vowel a "y" or "w" is placed as interfix (see interfix documentation).

relative clause (the by me built house vs the house built by me)
English: the house built by me / Neo-Khuzdul: Zahar mazahrul miyê. (the house (that which is) built byme)

adpositional clause (preposition: "in Erebor" vs postposition: "Erebor in").
English: in Erebor / Neo-Khuzdul: ni Erebor (in Erebor)

Negation

When negating a verb "ma" (or "lu") is placed before the verb (more information in document 07 - Usage of negation and affirmation).
Example: "shelekmâ" - "we drink" / "ma shelekmâ" - "we did not drink".

Noun-Adjective Order

Contrary to English nouns always* precede adjectives in Khuzdul. (*with the exception of titles)

Examples (nouns in bold / adjectives underlined) :
Silver-coloured **beard**
Targ zigil
[**beard** silver-coloured]

Example of Execptions to the classic Noun/adjective order in titles:
Long**beards**
Sigin-**tarâg**
[long **beards**]

Note on noun-adjective order: in Khuzdul numbers in combination with nouns are always treated as if they were adjectives.
Examples:
Three **dwarves**
Khazâd gem
[**dwarves** three]

DOC: 42 - Forms of Politeness

T–V distinction

T-V distinction, from the Latin pronouns "tu" and "vos", is a contrast, within one language,
between second-person pronouns that are specialized for varying levels of politeness, social distance, courtesy, familiarity, age or insult toward the addressee.
Modern English (outside of certain dialects) has no syntactic T–V distinction,
though has semantic analogues to convey the mentioned attitudes towards the addressee, such as whether to address someone by given or surname, or whether to use "sir" or "ma'am" in American English.

The T-V distinction in Khuzdul is directly noticible in 2nd person forms.
In Khuzdul we can make three distinctions.

Example:
"I look (at) you (spoken to a female)"

Formal form
"ankaki astî"
The formal form is commenly used in a business situation or where no existing relationship exists.
When a conversation takes places between many individuals where one of the company is new to the group, has no existing relationship, is a guest or a superior, it is considered polite to address all with the formal form.
In military service or when among royalty it is the only accepted form.
When the formal form is used among family members or best of friends it can indicate an expression of contempt (in order to ridicule another person's self-importance)
In poetry the formal form can be used to express a profound form of affection, indicating the person that is addressed is considered of greatest value to the speaker.
The formal form is constructed by separating the conjugated verb "ankaki" [I look (at)] from the pronoun "astî" (you - female - acc.).
For an overview of all personal pronouns used with the formal form, please refer to document 01 - Neo-Khuzdul Personal Pronouns

Familiar form
"ankakizi"
The familiar form is used by parents speaking to children, elders to youngsters, between good friends, those closely related to each other or to animals.
The familiar form is constructed by merging the conjugated verb - "ankaki" [I look (at)] - with the genitive determiner pronoun (indicating "your" when compound to pronouns) - "zi" (you - female - acc.).
For an overview of all personal pronouns used with the familiar form, please refer to document 01 - Neo-Khuzdul Personal Pronouns

On rare occasions the familiar form will add a "y" or "w" in between the conjugated verb from the genitive determiner pronoun.
This is generally true when the last letter of the conjugated verb form and the first letter of the genetive determiner are both vowels.
Example: "igjij+e (follow+me) " becomes "igjije" (directed at one individual), yet when directed at more than one individual the plural imperative form is used: "igjijî+e" (follow+me) becomes "igjijîye".
As the vowel "i" at the end of "igjiji" conflicts with the "e" (me) of the genetive determiner, hence to avoid crasis (which would complicate the understanding of the word) an "y" is added between both elements.
For more on this please see the documenation on "***interfix*** ".

Disrespectful form
"ankakimê"
Using the disrespectful form is considered vulgar, and its use is to be taken as an expression of an aggressive attitude towards the person addressed.
There should be no doubt that when this form is expressed the speaker intends to insult or shame the person addressed.
It is commonly the form used to address orcs, or any kind of enemy.
The well known battle cry: "Baruk khazâd, khazâd ai-**mênu**", uses the disrespectful form.

Honorifics

Zirak
Zirak is commonly used as a general polite term for "master". This title is placed before the name.
Literally, "zirak" means "master" or "peak" (or he that is at the peak / above others).
The term is also found in the name of the teacher of renown dwarven smith Telkhar (Telchar), "Gamil Zirak", an epithet meaning "old master".

Uzrakê
Uzrakê is commonly used to speak of a teacher of skill or craft.
Literally, "uzrakê" means 'my master'. "Uzrak" meaning "master", with the possessive suffix "ê". Although it is technically a possessive form, it is used as a general title even for those who are not one's personal teacher.

Uzugbad
"Uzugbad" is an acronym for "uzrakê, ugsharê, uzbadê," a phrase meaning "My Master, My Teacher, My Leader."
This is an honorific title given to scholarly leaders of the Dwarvish community. In writing, this title is placed before the name, as in "Uzugbad of Thorin's Hall".

Mutarsasûn(a)
"Mutarsasûn" is an acronym for "Mukhuh targzu satarrigi sigin" (a phrase meaning "May your beard continue to grow longer!"), combined with the personifying "ûn".
When addressing a female dwarf the term changes to Mutarsasûna.
This honorific is usually placed after the name and is often abbreviated as "mts".

Mutkê
Mutkê is an acronym for "**Mu**khuh ta**ka**yili" meaning "May he continue to live". This title is usually placed after the name.
Though the meaning indicates the addressee is a male, it is commonly used for both males and females.

'Agshazihar"
Agshazihar is an acronym for " '**a**mad u**gsh**arê, **z**iraku za**h**ar" meaning "mother teacher, master of the house". This honorific is usually placed before the name, at times abbreviated as 'Agsh.
The honorific has purely positive connotations and it is considered a great honour for dwarvish mothers to be called " 'agshazihar".
In this role the female would not only manage the household, enrich family ties, aid in spiritual bonding,
but would also care for, educate and guide her children upon their path to adulthood.
In addition she would ensure the treasury of the family would be well kept and continues to grow;
by advising her husband and other family members to go on profitable expeditions and trade ventures.
As the meaning indicates the addressee is a female and the title is only used for mothers.

"Munâditza"
"Munâditza" is an acronym for "**Mu**khuh **n**âla(hu/diya) **d**u **It**dendûm **z**adkhul" ("May his/her path to the Halls of Waiting be straight").
This honorific is only used with dwarves that have gone to the Halls of waiting (died).
It is usually placed after the name and is often abbreviated as "Mndz"

"Khya"
'Khya" is an acronym for "**Kh**al **a**ya '**a**banbidĝn(hu/diya)", meaning "Peace (be) upon (his/her) tombe"
This honorific is only used with dwarves that have gone to the Halls of waiting (died).
It is usually placed after the name.

Khuzdul is the language of the Dwarves in J.R.R. Tolkien's legendarium set in Middle-earth.

DOC: 43 - Adjectives

ADJECTIVE TYPE	*TYPE DETAILS*	tri-radical Form (singular)	Example
TYPE 1	size/time (literally and figurally) (great / old)	CaCiC	gabil/gamil
TYPE 2	shape and derived color (long / silver-colored) form 1 (native)	CiCiC	sigin/zigil
TYPE 3	environment and relation to others (hollow)	CuCuC	tumun
TYPE 4	main color (red)	CaCaC	baraz
TYPE 4b	derived from main color (reddish)	CaCCul	barzul
TYPE 5	defines features of the senses or manners	CaCC	sharb
TYPE 6	distances	uCCaC	udlag
TYPE 7	related to visual features of height (deep)	CuCCâ	buzrâ
TYPE 8	related to shades and colours	CuCC	dush
TYPE 9	the …… one (Adjectival Derived Noun - Intensifier)	iCCiC / aCCaC	izgil/abraz
TYPE 10	shape and derived color form 2 (non-native)	CiCCa	hirba
TYPE 11	related to volume, density, substance, resistance or mass	CeCeC	therek
-UL Type	noun derived adjectives (in the manner of ...., like …)	…..-ul	khuzdul
-UL/-ÛN(A)/-ÂN(A) Type	passive participles used as adjectives	…..-ul/-ûn(a)/-ân(a)	makargûn

Plural Adjectives

In rare cases adjectives can take a plural form.
This is typically seen when one wishes to explicitly indicate that all elements of a group possess the characteristic indicated by the adjective.

Example:

Khuzd zudur	"important dwarf" (singular noun will always use singular adjective)
Khazâd zudur	"important dwarves" (plural noun uses the singular adjective form - indicates that at least one of the dwarves is important, though the others may very well be important as well.)
Khazâd zudrâ	"important dwarves" (plural noun uses the plural adjective form "zudrâ" - the speaker wishes to explicitatly stress that all the dwarves in question are of (equal) importance.)

Plural adjectives are rarely used in everyday speech, unless one wishes to stress the characteristic applies to all elements of the group (see above).
Furthermore, plural adjectives are NEVER used in compound words.
Example: "Sigin-tarâg" (Longbeards) and NOT "Singâ-tarâg". Compound words always use the singular adjective form.

Plural adjectives are formed by adding "-â" to the singular form, afterwhich a syncope of the mid open vowel usually occurs.
Example: "zudur" (singular adjective) + "-â" = "zudurâ", which undergoes a syncope of the mid open vowel and becomes "zudrâ".

Order of Adjectives

In English, not only do most adjectives come before the nouns, the order of multiple adjectives in a sentence is clearly defined.
For instance, we say: "a large Gondorian gold candle", not "a Gondorian gold large candle", or a "gold Gondorian large candle".
As in other Semitic languages a noun will always precede the adjectives that defines it.

*Examples (nouns in **green**)*

loyal dwarvish Lord
Zabad khuzdul munus
literally: "Lord dwarvish loyal"

long smooth table
raban sigin bitis OR raban bitis sigin
Literally: "table long smooth" or "table smooth long"

old orcish axe
bark rukhsul gamil
Literally: "axe orcish old"

precious fat meat
hasas rakl dufut OR hasas dufut rakl
Literally: "meat precious fat" or "meat fat precious"

usual bloody horror
'urru dammul bunuh
Literally: "horror bloody usual"

courageous hairy halfling
Malkûn zantul zunug
Literally: "halfling hairy courageous"

As the above examples clearly illustrate, there is an order of adjectives in Neo-Khuzdul, yet not as rigid as what we seen in English.
What you will notice however is that noun derived adjectives (...-ul adjectives) always precede the primary adjectives (all other adjective forms, type 1 to 11).
Thus, any adjective that is derived from a noun will always follow that noun first, followed by the other adjectives.
Note: although a type 4b adjective ends in "-ul" it is NOT considered a noun derived adjective and treated as primary adjective, hence it does not need to be placed directly after the noun.

NOUN -> DERIVED ADJECTIVE -> PRIMARY ADJECTIVE

In case there are multiple derived adjectives or multiple primary adjectives in one line you can freely swap these, as long as the derived adjective preceed the primary adjectives.
This classification of adjectives based on their derivation source is called the **DP hierarchy** (Derived Primary), something we see in other Semitic languages as well.

Adjectives in the construct state

As in the absolute state, when adjectives are used in the construct state, they follow the noun which they modify.
Examples:
ibinu 'urs mafangul *("gem of captured fire")*
ibinu mafangul 'urs *("captured gem of fire")*

Passive Participles used as Adjectives

Depending on the structure used, the passive participle form can also be used as adjective or noun.

Examples:
"Manakdul" (Passive Participle), meaning: "That which is worn"

Passive Participle as Passive Participle or Adjective
Neked manakdul.
"The fabric was/is worn." OR "The worn fabric" (Exact translation may vary depending on further context).
Rule: Noun + Passive Participle = Passive Participle is used as either Passive Participle or Adjective
Note: In situations where one wishes to use a participle form it is much more common to use either a past or present participle instead of a passive participle.
The same sentence using past and present participles: "Neked mankad" - "the fabric is being worn (now)" / "Neked manekda" - "the fabric has been worn"
More information about past and present participles can be found in DOC 2: The Verb

Passive Participle as Noun
Mabkimi manakdul.

"We buy/bought that which is worn. "
Rule: Conjugated Verb + Passive Participle = Passive Participle becomes Noun

Passive Participle as Adjective
Mabkimi neked manakdul.
"We buy/bought the worn fabric."
Rule: Conjugated Verb + Noun + Passive Participle = Passive Participle becomes Adjective

When a passive participle is used as adjective it is subject to inflection based on the noun it is modifying.

Examples:
"Makargul" (neutral (objective) passive participle form), meaning: "That which is honored"
Afhani kadas makargul
I study the **honored manuscript**
The noun in question is neither male nor female, hence uses the neutral (objective) form.

"Makargûn" (singular mas. defined passive participle form), meaning: "He that is honored"
Afhani khuzd makargûn
I study the **honored dwarf** (m)
The noun in question is singular; hence the singular passive participle must be used.
Yet it can be either male or female, by using the singular masculine form we provide further information about the noun, indicating the dwarf in question is male.

"Makargûna" (singular fem. defined passive participle form), meaning: "She that is honored"
Afhani khuzd makargûna
I study the **honored dwarf** (f)
The noun in question is singular; hence the singular passive participle must be used.
Yet it can be either male or female, by using the singular feminine form we provide further information about the noun, indicating the dwarf in question is female.

"Makargân" (plural mas. defined passive participle form), meaning: "They (m) that are honored"
Afhani khazâd makargân
I study the **honored dwarves** (m)
The noun in question is plural; hence the plural passive participle must be used.
Yet it can be either male or female, by using the male form we provide further information about the noun, indicating the dwarves in question are males.
Even if one of the dwarves would be male and the rest female, it will use the male form.

"Makargâna" (plural fem. defined passive participle form), meaning: "They (f) that are honored"
Afhani khazâd makargâna
I study the **honored dwarves** (f)
The noun in question is plural; hence the plural passive participle must be used.
Yet it can be either male or female, by using the female form we provide further information about the noun, indicating ALL dwarves in question are females.

DOC: 44 - Interrogative words

ENGLISH	***KHUZDUL***	*Info*
interrogative determiners:		
what (formal interrogative)	***kulhu***	Also used for "that which", "those that", "the thing that".
what (informal interrogative)	***kud***	Also used for "such".
whose (interrogative possessive determiner)	***kû'***	
interrogative pro-form:		
interrogative pronouns:		
who, whom	***ku'***	
what (formal interrogative)	***kulhu***	
what (informal interrogative)	***kud***	
which	***kudze'***	Literally "what one"
interrogative pro-adverbs:		
where (formal interrogative)	***kunh***	Also used for "whereabouts".
where (informal interrogative)	***kûr***	Also used for "wheresoever, no matter where, anywhere".
wherever	***kunhra***	
whence	***bikûr***	Literally "from where"
whither	***dukûr***	Literally "to where"
when (formal interrogative)	***kuthu***	
when (informal interrogative)	***tân***	Also used for "while"
whenever	***kuthra***	
how	***zûr***	
why, wherefore	***kuf***	
whether	***adu***	

Formal vs Informal Interrogative Words
In Neo-Khuzdul the interrogative words "what", "where" and "when" each have two forms; formal and informal.
The formal form is commenly used in common sayings, business situations, in formal settings or as a general form of added politeness.
In military service or when among royalty it is seen as the only accepted form to be used.

Since the start of the Third Age, at first among the common folk, there has been a tendency towards more use of the informal interrogative.
This is particularly true among Firebeards, Broadbeams and (to a lesser extent) Longbeards.
Among these western clans the formal interrogative has become rare and is generally only seen in sayings or to show polite submission (example: a student to a teacher).

These days (among the western clans) it is no longer considered very rude to use the informal interrogative in formal situations,
except when addressing royalty or in situations where one should show polite submission.

DOC: 45 -Insults

*Though Professor Tolkien depicts dwarves as commonly well-spoken and well-mannered, particularly to friends and guests, they remain a variety of incarnate rational creatures and thus are capable of a wide range of expressions. While they display great politeness toward friends and guests they display a similarly impolite attitude toward foes. Something which is apparent by the fact that Neo-Khuzdul possesses four disrespectful conjugations in the second person. These forms are frequently used in insults or battle cries (as seen in "Khazâd ai- **mênu**) , explicitly targeting their foes with disrespectful discourse. Below you will find a brief selection of insults, the vast majority using the disrespectful forms.*

Neo-Khuzdul	English
Abrâfu shaikmashâz!	(You) descendant of rats!
A'lâju Mahal.	(You) shame of Mahal.
Rukhstulkh muha barkmêzu.	An orc-smith made your axe. (Directed at a male individual.)
Nimthurul me ra rukhs, zânami rukhs.	Between you and an orc, I would kiss an orc.
Marasmê targmêzu himir fa kasat 'adadmêzu bal 'utn?	Do you keep your beard short or was your father just a man? (Directed at a male individual.)
Fanâd duzdnu targ usganul mi mê.	Elves have a longer beard than you.
Kakhuf inbarathrag.	Goat turd.
Khurb-takhrabmî zars-tamanâl.	Horse-riding tree-dweller. (Saying directed at elves (and at a male individual))
Zûr êthârul mahmabakhôn ni targmêzu?	How many gems have disappeared in your beard? (Saying suggesting the suspicion of theft, directed at a male individual.)
Nî durzumêzu kekhaf ma zamahkekhefmi ai-hu.	If your face were a latrine I wouldn't even defecate on it. (Directed at a male individual.)
Inbul-hibir fundhamâd-ublag.	Pointy-eared lembas-muncher. (Saying directed at elves.)
Îsh kakhfê ai-'d-dûr-rugnul.	Pour my excrement upon the naked-jawed ones. (Saying directed at elves.)
Kakhafu durh 'umalul sakh mi mê.	The back side of a troll is a more pleasing sight than you.
Y'azul amsâl zabinsakiri tada targ kuthu zasagmali.	With any luck, you'll lose that beard when you get old. (Directed at a male individual.)
Me lo yothur mi iraknadadu Nulukhkhazâd.	You are no more than a cousin of the Petty-dwarves. (Directed at a male individual.)
Me asnân tada Mahal duhû kansu tah.	You are proof that Mahal has a sense of humour.
Me kana nutuh huluk salkhith ma zafebela ai-mê.	You are so poor even a young drake wouldn't waste its breath on you.
Me dubul ma samnirmî kasab du zantulbasn bintablagi.	You are so simple you could't sell a pie to a starving hobbit.
Ma kasakhbibmî lebal.	You couldn't forge a spoon. (Directed at a male individual.)
Saglibmî zasaglibmî zailumêzu, kuf yom atkât?	You said you were going to speak your mind, why is there silence? (Directed at a male individual.)
Sakhgirabmî azafr khâga gamil.	You smell like aged cheese. (Directed at a male individual.)
Sakhgirabi kana zazn tada yazârnu darâh sereja gairu.	You smell so foul even the trolls left the cave. (Directed at a male individual.)
Zasabbathmî dashatmêzu azbâh nî dumê khî.	You would deny your own son an inheritance, if you had one. (Directed at a male individual.)
Targmêzu takhagi azafr rukhs-kekhaf.	Your beard stinks like an orc latrine. (Directed at a male individual.)
Adadmêzu duhû bintarg.	Your father has no beard. (Directed at a male individual.)
Sigin'adadmêzu kasat gairurukhs.	Your grandfather was a goblin. (Directed at a male individual.)
Amadmêzu yudai barathgalthasas 'ezhul nimgumul khagsmêzu kana kunbunul nikh zajalataha yamêzu.	Your mother put salted pork around your neck so the local mutt would play with you. (Directed at a male individual.)
Yasthûnamêzu taglibiya me bannûn. Tamlaniya tada zurulai d'aflunruk mê.	Your wife says you're a treasure. What she means is that she wants to bury you.

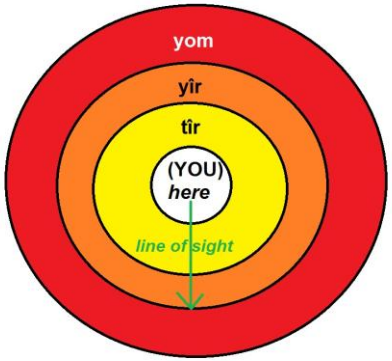
DOC: 46 -There



The word **"there"** is translated into Neo-Khuzdul by either **"yom", "yîr", "tîr"** or **"hîr"**.
While "yom", "yîr" and "tîr" are used to define locations,
"hîr" is mainly used in combination with prepositions or numerals; or as a temporary subject or subject in passive sentences.

"There", to define a location:

- **"yom"** (there – yonder - a place beyond reach or beyond sight)*
- **"tîr"** (there - a place nearby or within reach)
- **"yîr"** (there - yonder - in the distance, though still visible)

"Hîr":

The word "hîr" is used in four ways in Neo-Khuzdul, but never related to location.

1) **In combination with a preposition: "aya" (upon), "ni" (in), "du" (to), "tu" (out), "mi" (by), etc...**
   *Can in most cases be translated by the English **"it"**.*

Examples:

- Kikûn samziri **mi hîr**. Kun, amziri **mi hîr**. / Have you ever worked **with** a chisel? Yes, I have worked **with it**. (preposition "with")
- Kikûn saglibiya duzu **udu** akhamdiya? Kun, saglibiya dê **udu hîr**. / Has she ever spoken to you **about** her youth? Yes, she has spoken to me **about it**. (preposition "about")
- Taslini bekhaz **ai**-dehar? Kun, taslini **ai-hîr**. / Did the hammer fall **upon** the anvil? Yes, it fell **upon it**. (preposition "upon")

2) **In combination with numerals**
   Can in most cases be translated by the English "of them", or opting to leave the translation altogether.

Examples:

- Bakammâ felâk sasekh – Bakammâ **hîr** sasekh. / We bought ten chisels – We bought ten (**of them**).
- Khajama e barâk nu' – Khajama e **hîr** nu'. / He gave me two axes – He gave me two (**of them**).
- Asakhi rukhs ze' - Asakhi **hîr** ze'. / I saw an orc – I saw one (**of them**).

Notes: Due to nouns and adjectives/numerals swapping places in Neo-Khuzdul compared to English, "hîr" is placed before the number.
Also, "hîr" is only applicable with whole numerals, not with fractions (e.a. "three-quarters") or words like "a half" or "one and a half".

3) **As a subject in a passive sentence**
   In a passive sentence, the subject does not perform the action in the sentence. In fact, the action is performed on it.

Examples of passive sentences:

Thorin was taken to the hall of the Elven king.
(In this example, Thorin did not perform the action of the verb to take. The action was done to him. He was the recipient of the action.)
Nowadays, ravens are protected.

(The action is being done to the subject, ravens.)
The dwarves are laughed at by the elves of Rivendell.
(The action is being done to the subject, "The dwarves.")

The above passive sentences have a subject.
"Hîr" is however used in passive sentences that do NOT have a full subject. It can in most cases be translated by the English "there", or opting to leave the translation altogether.

Examples:

- **Hîr** imzênat! / (**There** is) a knock!
- **Hîr** ith zud. / **There** should be laughter.
- **Hîr** ambâk mazrab / Nothing is written. (**There** is nothing written.)

4) <u>As a temporary subject.</u>
In such events there is an actual subject in the sentence, usually mentioned further down the same line (with the exception of some questions).
Can in most cases be translated by the English "**there**", "**there**... **that**", or opting to leave the translation altogether.

Examples (normal sentences):

- **Hîr** 'aimukharâb ni sutum / **There** are ponies in the stable (subject: ponies)
- **Hîr** khazâd êthârul zullâ / **There** were many dwarves **that** were drunk / Many dwarves were drunk (subject: Many dwarves)
- **Hîr** luka zayarabôn / **There** was no one **that** turned up / No one turned up (subject: no one)

Examples (questions):

- Unâkh **hîr** na? / Are the visitors **there** yet?
- Kudze' uzbad zatâti **hîr**? / Which Lord will be **there**?

Combinations:

Examples of combinations of "yom", "yîr", "tîr" or "hîr" in once sentence:

- **Hîr** 'aimukharâb tada tabsinati zê **yom**, ra zû tabsinati **yîr**. / **There** are ponies that ran first **there**, and now run **there**.
(While the English translation does not tell the reader much of the distances, the Neo-Khuzdul line clearly gives more information)

Note: *in every day colloquial speech "tîr", "yîr" and even "hîr" are often replaced by "yom", especially by younger generations.
Though accepted in most dwarven halls, it is often associated with a lack of manners, sophistication, or even intelligence.

DOC: 47 -Infinitive and Subjunctive

INFINITIVE

In English the infinitive version is usually the verb version you will find in a standard dictionary.*
"To die" for instance, is an infinitive; "die" being the bare infinitive of "to die".
Infinitives are commonly used in sentences that generally do not have an expressed subject.
However, following certain verbs or prepositions, infinitives commonly do have an expressed subject.

Examples :
*"Azrali izdnu d' **aznut** tarâgizd" (I want them to **comb** their beards.)*
*"Khama uthâk d' **agnud** zû z'ata asadul" (For the miners to **delve** now would be dangerous).*

In Neo-Khuzdul the infinitive version is called "thukulamzar" ("solid worker") and is used for two things mainly; either as "to"+ bare infinitive.
For instance:
*" **D'amrud** mi akrâg" (" **To die** with honour").*

In this example we see that the bare infinitive is joined by the particle "du" (turns into d', due to starting vowel in "amrud"), meaning "to".
Exactly like in English, one can use the particle "to" to join the bare infinitive.
If you use an infinite version with the particle "to", you'll need to place "du" (d') before the bare infinitive.
The bare infinitive is always formed as "aCCuC" ("aCuC" in bi-radicals) (C = consonant) in Neo-Khuzdul, like "amrud" (die).
In Khuzdul infinitives are not inflected for tense or person.

aCCuC

Another way of translating "amrud" would be "dying", a verb-gerund form, not to be confused with the gerund-noun "imrêd" - "(the act of) dying".
So, if we left out the "du" (written as d') and wrote "amrud mi akrâg", we would say "dying with honour".

**Note, however, that the to-infinitive of Khuzdul is not the dictionary form; that is the third person singular perfect form (in concise dictionaries where no other forms are provided).*

(Intensifying) Infinitive Absolute

The infinitive absolute (or intensifying infinitive absolute) is a construction that uses the infinitive for verb or subject focus, or to intensify the main verb.
It can be used in "infinitive + conjugated verb"-form, like in:
"amrud zatamradi" (literally "a dying he will die"; figuratively, "he shall indeed/surely die").
Or the other way around, "conjugated verb + (to+) infinitive"-form , as seen in:
"tafrakhi d' afrukh" (literally: "he carries to carry"; figuratively, "he shall carry indeed/surely carry")

The usage of the infinitive absolute was commonplace in early Khuzdul, but by the end of the Third Age it is commonly restricted to works of literature or stately speeches.

Subjunctive

In Neo-Khuzdul the subjunctive, known as "izrêlalgab" (wishing-declarer), is a construction that typically uses the infinitive to express various states of unreality such as wishes, emotions, possibilities, judgments, opinions, obligations, or actions that have not yet occurred.
In meaning the subjunctive is nearly identical to the jussive form (see documentation on jussive form), as such both forms almost entirely interchangeable.
The subjunctive will nearly always use the future prefix "za" (will/shall), something never seen in the jussive form.
As such, the subjunctive commonly uses the "tada za+infinitive" [that ... will (inf.)] construction, which becomes: "tada zâCCuC" ("tada zâCuC" in bi-radicals).

tada zâCCuC

Both subjunctive and jussive are used when a desire is accompanied by "tada" (that), though the jussive form is considered the standard form for such clauses,
while the subjunctive is often regarded as the archaic or literary form to be used with a that-clause.
Yet, while the jussive form can use "tada" (that), the subjunctive will nearly always use it.

Unlike the jussive, seeing that the subjunctive is created by using the infinitive, the subjunctive is not inflected for person.
Though the subjunctive does not use any inflection, nor is any written, any person form can be implied, though commonly implies the 3rd person singular.
As such when reading the subjunctive one will commonly need to deduct the implied person form purely from context.
The subjunctive is likely the most figurative form in Neo-Khuzdul, where the reader must not only rely on context to deduce the implied person form, but also overall meaning.

In precative sentences, such as "let him go", the jussive is the only form to be used.

Examples of subjunctive:
"Tada zânnuk" (literally: "That (he) will return" / figuratively: "May he return")
"Azrali tada zânnuk" (literally: "I want that (he) will return" / figuratively: "I want him to return")

Compared to the jussive:
"Nanuka" (literally and figuratively: "Let him return", or "I suggest/recommend he returns")

Some rare forms of the Khuzdul subjunctive that do not use "tada" (that), nor the future marker "za", survive mostly in a literary register:
"Akyul Uzbad!" (literally, "Live the-lord!" / figuratively: "Long live the king!")

DOC: 48 -Gerund

In English the gerund form is commonly a noun formed from a verb by adding -ing
While in the English language a gerund can function as a noun, verb, adjective or sometimes adverb; in Khuzdul it functions only as a noun and verb.
When functioning as a verb-gerund, the infinitive form is always used (see documentation on infinitive)
When functioning a as gerund-noun, the gerund form is used as seen below.

As applied to Khuzdul, the gerund refers to the verb's action noun (gerund-noun), and is grammatically known as "imhêlayad" ("acting-placer").

With tri-radical words this form always takes the **iCCêC** pattern and is generally the equivalent of the -ing ending for nouns in English.

To clarify, here are some examples of gerund forms (and gerund-like forms) in English and the different ways of translating them into Khuzdul, using "kicking" as an example.

English	***Khuzdul***	English Type	Khuzdul Type
a) That goat is good at ***kicking***	*Tada inbarathrag galikh zai* ***ibnêz***	gerund (noun)	imhêlayad (gerund-noun) "the act of kicking"
b) A ***kicking*** *goat*	*Inbarathrag* ***banzul***	gerund (adjective)	afthâkgalabi (adjective) "kicking, manner of"
c) The goat is ***kicking***	*inbarathrag* ***abnuz***	gerund (verb)	thukulamzar (infinitive) "action of kicking"
d) It is ***kicking***	***tabnizi***	present participle	magalbul (imperfect) "it is kicking/ it kicks"

As you can see from the examples above, while in English these forms all use the same word "kicking", in Neo-Khuzdul they all have different forms, depending on their function in the sentence.
In Neo-Khuzdul when refering to a gerund form, we either mean the gerund-noun (iCCêC), used to indication "the act of ...",
or we mean the infinitve verb-gerund (aCCuC) - see documentation on infinitive.
Both gerund-noun and verb-gerund have been underlined in the above examples.
Note: One could also use the magalbul (imperfect form) in example c), in fact it would be the preferred form if the action were to happen before the very eyes of the speaker.

The gerund-noun is frequently used in compound words, examples are:
"igl ***ishmêk*** *" [meaning: dwarven sign language, literally: signing-gesturing)]*
" ***ibsêt*** *majd" [meaning: athelas, literally: becoming healthy-plant]*

Note: In fact the word "iglishmêk" is a double gerund-noun, as the element "igl" is a gerund-noun too (using the ***iCC*** *patern seen with bi-radical words).*

DOC: 49 -Augmentative and Ultimative

Introduction

The augmentative and ultimative forms are often confused with each other and with the elative form (used for comperatives and superlatives),
seeing that at first glance they perform a nearly identical function.
Yet, when digging deeper into each form we notice clear differences in both meaning, usage as well as applicability.

Examples:
Augmentative: telkhar =supreme smith* (*artisan, smith-hammer)
Ultimative: telkhel = smith of all smiths* (*artisans, smith-hammers)
Elative: 'utlakh = greater / greatest smith* (*artisan, smith-hammer)

Ancillary Homonyms

The first thing one notices about these words is that all three forms are ancillary homonyms.
Ancillary homonyms are words that are spelled and pronounced identically AND have meanings that are related to each other.
For instance, the word "Telkhar" can mean "supreme smith", "supreme artisan" or "supreme smith-hammer"
Augmentative, ultimative and elative are all such ancillary forms (grammatical structures in Neo-Khuzdul that do not have a single meaning but contain a main meaning and one or more additional meanings).
The main meaning (listed first in the dictionary) is the one most commonly used, yet in some cases the additional meanings are just as relevant or as frequently used.

Augmentative

Literal meaning: "Supreme ... "
Examples : "telkhar" (supreme smith, artisan or smith-hammer), "khezrar" (outrage = supreme anger, fury or rage)
Further information: The augmentative indicates that one element of a group (or more in case of the plural form) is the highest in rank, authority, degree or quality.
Usage and applicability: The augmentative was historically reserved for dwarvish epithets and inner names. A prime example being the epithet of the legendary dwarven smith "Telkhar" (written as Telchar in some elvish manuscripts).
Since the second age the augmentative is frequently used to exclaim strong emotions in a single word. If one shouts "khezrar!", one expresses one's feeling of utter outrage.
It is believed the custom is derived from mining practices, where miners would shout "segrar! (supreme collapse), moments before the mining tunnel would collapse, as a warning to other miners.
Though the augmentative is not the only form used for epithets and inner names, it still carries great prestige (especially among the eastern clans) and is the traditional form for male inner names.

Form: **CeCCar** (singular) and **CeCCâr** (plural)

Ultimative

Literal meaning: "... of all ... "

Examples: "bunmel" (beauty of all beauty, or grace of all grace), "murnêl" (wine of all wine, or berry of all berries)
Further information: The ultimative indicates that one element of a group (or more in case of the plural form) is singularly unique or of exceptional degree or quality.
Usage and applicability: The ultimative is commonly used as an address in an expression of praise, congratulation, encouragement, or respect to one or more people,
or when one expresses similar thoughts about objects; or feelings. It usually has a positive and complimentary meaning.
If one were to compliment good wine provided by a host at a feast, one could raise their glass and exclaim "murnêl" (wine of all wines).
Or if one were to flirt with a fair dwarven maiden, one could whisper in her ear "bunmel" (beauty of all beauty).

Though the ultimative is commonly used for compliments, it can on occasion be used to express disapproval, discontent or even disgust.
In case one describes one or more people negatively the ultimative is commonly not expressed within hearing range of the person in question.
For this reason the ultimative is sometimes referred to as "akhsâg iglêb-badakhi" (the gossip form).
An example of a negative expression of the ultimative is "tunzel". Often used to describe spiders, it's literal meaning is "bug of all bugs" or "annoyance of annoyances".

The Ultimative would rarely be used as someone's title, as that would be commonly be considered presumptuous.
Firebeard and Broadbeam dwarves have been known however to give their children inner names using the ultimative construction, though it is not a rule.

Form: **CvCCel** (singular) and **CvCCêl** (plural)
The first vowel of the ultimative can either be "e", "a" or "u"; this is the same base vowel used in the perfect verb construction.

Elative - for more information on the elative form, please refer to the documentation on elative/sublative.

DOC: 50 -Interfix

Definition:

An interfix, or, more commonly, a linking element, is one or more letters which are placed in between two words or word elements. It does not have a meaning by itself, but merely ensures these elements can be joined.
In many languages interfexes are used in compound words, for instance, in the english "*speed-o-meter* " the "o" serves as the interfix.

In Khuzdul compound words that consist of two or more noun/adjective elements are usually formed without interfix.
For instance: "Zirakzigil", a compound noun consisting of the noun "zirak" and the adjective "zigil" clearly do not require any interfix to join.

Interfix "Y"

In Khuzdul the interfixe "y" is commonly present when a compound fulfils two requirements:
* One of the elements is a pronoun
* The last letter of the first element is an "a", "i" or "e" AND the first letter of the second element (pronoun) is a vowel.

Examples:
He forgets me = tanthari (he forgets) + e (me) = tanthariye*
my word = galabi + ê (my) = galabiyê

NOTE: In case two nouns form a compound, where both the last letter of the first noun are the first letter of the second noun are vowels an interfix is NOT placed.
In such cases crasis occurs (for more information see documentation on crasis).

Omitting the Y-Interfix in verb constructions*

With verbs constructions one may choose to omit the y-interfix and opt to separate the two elements with a space.
This is common in the following situations:
* Learning Environment: it is common (especially in basic Khuzdul lessons) to omit the y-interfix (both in written and spoken form), to clearly define the two elements.
* Clarification: in situations where the listener did not understand the speaker, the speaker may repeat what he/she said omiting the y-interfix entirely, to ensure greater clarity.
* Stress: when the speaker wishes to add additional stress or focus to the pronoun, one will often omit the y-interfix and slightly lengthen the pause between the two elements.

Interfix "W"

In Khuzdul the interfix "w" is commonly present when a compound fulfils two requirements:
* One of the elements is a pronoun.
* The last letter of the first element is a "u" or "o" AND the first letter of the second element (pronoun) is a vowel.

Examples:
my heart = kurdu (heart) + ê (my) = kurduwê

Interfix "-im-"

Used for noun/genitive determiner combination ("love of my/mine" ("my love") ("amrâlimê") - used to stress belonging or ownership.)
Structure when using "-im-" is always: "Noun + "-im-" + genetive determiner" (not proper genitive pronoun).
For a full list of the genetive determiners see "DOC: 01 - Neo-Khuzdul Personal Pronouns"

DOC: 51 - Elision (Contraction)

Elision is the omission of one or more sounds (such as a vowel, a consonant, or a whole syllable) in a word or phrase, producing a result that is easier for the speaker to pronounce.

Colloquial Elision

In colloquial khuzdul elision comes naturally, and it is often described as "slurred" or "muted." Often, elision is deliberate.
Example of elision in colloquial khuzdul - "I am going to" - Formal: "**agnigi du**" → Colloquial: "**agnidu**" / Can be compared to a similar elision in English: "I am going to" → "I'm gonna".

Lexical Elision (Conforming Contractions)

Khuzdul lexical elision, or contraction, occurs in general when any word ends in a vowel that is the same form as the first letter of the one of the following word.

As such lexical only elision occurs in the following situations:

A) Dominant Contraction:

One of the bordering vowels is extended (â, î, û, ê or ô) WHILE the other vowel has the same form, but standard (a, i, u, e, or o)

1) ....â a.... becomes ....â '.... OR ....a â.... becomes ....' â....
2) ....î i.... becomes ....î '.... OR ....i î.... becomes ....' î....
3) ....û u.... become .... û '.... OR ....u û.... becomes ....' û....
4) ....ê e.... becomes .... ê '.... OR ....e ê.... becomes ....' ê....
5) .... ô o.... becomes ....ô '.... OR ....o ô.... becomes ....' ô....

Rule: the extended vowel remains and the standard vowel is replaced by '

*Example: " **Igribî 'b-bekâr d'zun** " ("Arm yourselves")* / from: "igribî ib-bekar ..."

B) Equal Contraction:

Last vowel of first word AND first vowel of the second word are identical vowels (both a, i, u, e, or o OR both â, î, û, ê, or ô)

1) ....a a.... becomes ....' a... OR ....â â.... becomes ....' â....
2) ....i i.... becomes ....' i... OR ....î î.... becomes ....' î....
3) ....u u.... becomes ....' u... OR ....û û.... becomes ....' û....
4) ....e e.... becomes ....' e... OR ....ê ê.... becomes ....' ê....
5) ....o o.... becomes ....' o... OR ....ô ô.... becomes ....' ô....

Rule: the last vowel of the first word is replaced by '

Example: ***Ikhf' id-ursu khazâd*** *("Feel the fire of the dwarves")* / from: "ikhfi id-ursu ..."

Rules of Lexical Elision:

1) The extended vowel is always dominant over a standard vowel and its presence will always ensure any standard vowel of the same form in the bordering word is replaced by '.
2) In case vowels are identical the first vowel will always be the one that is replaced by '.

Literary Elision (Nonconforming Contractions)

In song, literature or poetry contraction of vowels can at times occur between vowels that are not of the same form.
Though this goes against the rules of accepted lexical elision, it is broadly accepted as a literary form only.
In literary elision either of the vowels may be replaced by ', completely at the discretion of the author (though replacing the first vowel is more common)
The function of literary elision is to ensure rhyme or metre are more in line and to increase fluency of pronunciation.

Example:
*" **'ugmazul m'urs** ", ("fiercer than fire")* / 'ugmazul mi 'urs,

DOC: 52 - Folklore

Folklore among the dwarves can be described as traditional knowledge, tales, art and practices that are passed on mainly through oral communication; and -as their language- kept secret for the most part.

Quilting

The tradition of quilting likely originated at the courts of the Eastern Halls in the early first age and spread through trading among all clans.
It's primary and initial usage was to depict Royal lineages or the lineages of important houses.
In later times quilts were used as tools to educate the illiterate or to teach youngsters the art of writing.
Considering the secrecy of Khuzdul quilts proved more popular than tablets or parchment among most clans as a tool for education.
Not only were they more practical than tablets (easier moved and less prone to loss yet sturdier than parchment), but could be disposed quickly and completely with fire if the need arose (if a hall was taken by an enemy force).
By the third age the tradition of quilting had all but disappeared, mainly as Khuzdul became a language of tradition and lore and not so much a primary spoken language.

Music

The vast majority of Dwarvish Folk songs are drinking- or mining songs. Initially drinking songs were mainly in Khuzdul,
yet as the influence of Khuzdul waned and dwarves found those of other race living among them or near to them these songs were almost all translated into the common tongue of the region, changing all but the tune of the song.
Dwarven mining songs have (for the most part) remained in Khuzdul, as mining in dwarvish mines has remained a dwarf-only activity.

Example, (part of) a Dwarvish drinking song:
Original:
Ishlik! Ishlik! Ishlik! *(Drink! Drink! Drink!)*
D'azâg lakhad ins sanzigil, tân tanlikhîn! *(To eyes bright as Mithril when they are shining!)*
Ishlik! Ishlik! Ishlik! *(Drink! Drink! Drink!)*
Buhâ 'uglakh zai id-o'gil , tân tagkikhîn! *(Friends are better at the art of speaking, when they are ordering!)*

Later translated verion:
To Drink! To Drink! To Drink!
To eyes as bright as Mithril when they are shining!
To Drink! To Drink! To Drink!
Friends are better at speaking, when they're ordering!

Note: one notices the minor changes to the translated text to assure the rhythm is respected.

Mining Customs

Maztûn/Maztân
A "Maztûn" ("Maztân" - plural) is a spirit that lives beneath the ground and appears in mining tunnels. Many dwarven miners believe they commit random mischief, such as stealing miners' unattended tools and food.
Their name comes from "mamazzanatân" ("they who continue to knock"), referring to the knocking on the mine walls that happens just before cave-ins (actually the creaking of earth and timbers before giving way).
To some dwarf miners, maztân were malevolent spirits and the knocking was the sound of them hammering at walls and supports to cause the cave-in.
To others, who saw them as essentially well-meaning practical jokers, the knocking was their way of warning the miners that a life-threatening collapse was imminent.
According to Broadbeam folklore, maztân were the helpful spirits of dwarves who had died in previous mining accidents and who's' spirits never reached the Halls of waiting, warning the miners of impending danger.
To give thanks for the warnings, and to avoid future peril, Broadbeam miners would cast the last bite of their food into the mines for the maztân, before leaving the mine; a belief and custom that was later adopted by the other clans.

Festival Customs:

A popular custom in many Dwarf Halls is the custom to thank Mahal at the Spire on the last day of High Sun Feast (Midsummer Feast, aka "Zudraibrizamrâg").
Also at "Spring Fest", it is considered good luck by most dwarves to carry a straw of spring barley in your pocket during the time of the festival.
More information on these feasts see "DOC: 39 - Seasons and Feasts"

Sayings:

Dwarvish sayings of all seven clans contain many references to folk customs.

Some examples:

"**Yusth gês**" , literally "The sixth wife" (meaning: Apple of discord - Anything causing trouble, discord, or jealousy). This saying refers to the ancient belief that the one of the six wives of the seven fathers was bitterly fought over.
"Amuh gargzaharugnar haga khulum", literally "Make a tavern owner very rich". (meaning: Getting married).
This saying refers to the popular custom to hold an additional feast for friends and family at a local tavern a week after the marriage, as a sign of prosperity and good fortune.

Sneezing:

When dwarves (both males and females) sneeze the usual response is: "'**abura**" ("let it grow"), -referring to one's beard of course- after the first sneeze,
"**ra usgan**" ("and longer") after the second, and "**la' Sigintarg 'usgan**" ("till the longest Longbeard") after the third.
More archaically/formally, the translations are "**Mahal tamhadi targzu**" ("**targzi**" if spoken to a female), meaning "Mahal blesses your beard" and "**ra Uzbadul targ**"("and the Kings beard"), for first and second sneeze in that order.
The response of the sneezer would usually be "**r'azu**" ("**r'azi**" if spoken to a female), meaning "and yours") after the first sneeze,
"**ra tarug barafzu**" ("barafzi" if spoken to a female), meaning "and the beards of your family", after the second sneeze, and "**ra kû barraf haded**", meaning "and those of the seven clans", after the third sneeze.
When dwarf children sneeze, the usual response is: "**Tîr zant!**" ("There's a hair!"), after the first sneeze,
"**ra nanar**" ("and another"), after the second sneeze, "**zûr ta'bari!**" ("how it grows!"), after the third.
This refers to the belief that when dwarf children sneeze their beard (which they are all born with after all) sprouts a new hair. The polite response of the child usually is "'**abura**" ("let it grow") after every sneeze.

Any reference to The Lord of the Rings Online or any other brand name is not meant to claim ownership of material.

DOC: 54 - Assimilation

Definition and further information:

Assimilation is a common phonological process by which one sound becomes more like another similar sound. This can occur either within a word or between words.

In some language assimilation is common in spoken, written form or both.
An example of the spoken form in English is the word, "handbag"; when spoken rapidly is often pronounced as [ˈhæmbæg]
In other languages it is rare or only occurs in spoken form; the latter is the case in Khuzdul in specific dialects.
Khuzdul is considered a very "resistant" language, meaning that it is not easily subject to any form of assimilation.
This is applicable both synchronic (the active assimilation process in the language at a given point in time) and diachronic (historical sound changes).

"After their awakening this language (as all languages and all other things in Arda) changed in time, and divergently in the mansions that were far-sundered.
But the change was so slow and the divergence so small that even in the Third Age converse between all Dwarves in their own tongue was easy.
As they said, the change in Khuzdul as compared with the tongue of the Elves, and still more with those of Men, was 'like the weathering of hard rock compared with the melting of snow' Of Dwarves and Men" (HoME 10)

Assimilation of Khuzdul words in Khuzdul Dialects:

1) Grey Mountain Dialect (GMK)
GMK is one of only two Khuzdul dialects which assimilates sounds in spoken form, in particular with sibilants.
Forms of Assimilation in GMK:
1) ShZ becomes Z - Example: "mushz" (rodent) [mɔʃaz] is pronounced as [mɔz]
2) ZS becomes S - Example: "'izsagâl" (truly) [izsaga:l] is pronounced as [isaga:l]
3) SZ becomes Z - Example: "khagszunsh" (swan) [kʰagszʊnʃ] is pronounced as [kʰagzʊnʃ]

2) Stonefoot Dialect (RMK)
Stonefoot dialect, one of the Red Mountain dialects (RMK) is the only eastern dialect to have clear and defined assimilation, occuring exclusively in combinations of dorsal consonants.
Forms of Assimilation in Stonefoot dialect.:
1) KJ becomes J - Example: "tharkjezerbekar" (staff sling which can throw heavier projectiles than a normal sling) [tʰarkd͡ʒɛzɛrbɛkar] is pronounced as [tʰard͡ʒɛzɛrbɛkar]
2) KG becomes G - Example: "felakgundu" (cave-hewer) [fɛlakgʊndɔ] is pronounced as [fɛlagʊndɔ]*
3) KhG becomes G - Example: "ramekhganem" (fifty-four) [ramɛkʰganɛm] is pronounced as [ramɛganɛm]
4) KhJ becomes J - Example: "zaznukhjam" (person who gives gifts, but in a grudging manner) [zaznɔkʰd͡ʒam] is pronounced as [zaznɔd͡ʒam]
**It is believed a similar assimilation was present in Broadbeam and Firebeard dialects prior to the exodus to Khazad-dûm in the early Second Age.*

Assimilation of original Khuzdul words in other languages:

A) Sindarin
This best known example of Sindarization is "Felagund", from the Khuzdul "Felakgundu" - in which the "kg" is assimilated to "g".
This name was adopted by the elf Finrod as the founder and ruler of Nargothrond.
It was derived from a title given to Finrod by the Dwarves "Felakgundu" (meaning: “Cave-hewer”), Sindarized as "Felagund".
Some Elves re-interpreted this name as Felagon “Fair-minded Lord”.
Some scholars believe that this Sindarization was in fact a near copy of the assimilation that occurred in ancient Broadbeam and Firebeard dialects, which the elves transformed from "Felagundu" to "Felagund".

B) Adûnaic
Though many words in Adûnaic are derived historically from Khuzdul, for example: Kh.: "naith" (girl) => Ad.: "nithil" (girl).
Few words however are direct assimilations.
When we see direct assimilations they usually are stops that are changed into fricatives.
Example: Kh.: "Baraz" (red), became "Pharaz" (gold), as seen in "Ar-Pharazôn". Red and gold are of the same root in Khuzdul ("ubraz" being another word for "gold").

DOC: 55 - Participles

Present Participle (passive voice)

Participle: To indicate actions going on (imagined or in sight) this very moment, the imperfect would usually be used [For instance: "I am writing (I write)" / "azrabi"].
Not to be confused with gerund noun form: [(the act of) writing] .

There is however a form that is used to clearly and explicitly emphasize the PRESENT state of an action, this is the Present Participle Form.
For instance “is NOW being written". This form is not conjugated, and as such always uses "a" as root vowel.
The Present Participle always applies a passive voice (is **being** hewed).
When one wishes to convey an active voice (is hewed), one would commonly use the imperfect, seeing the recent event is being vividly imagined.

The Present Participle is always formed as: "**maCCaC**" and is NOT conjugated.

Examples:

maflak	*(is NOW being hewed)*
mazrab	*(is NOW being written)*
magnad	*(is NOW being delved)*

Past Participle (passive voice)

Past particle forms are usually formed in the perfect "He was writing (He wrote)" = "zaraba".

There is however a form that is used to clearly and explicitly emphasize dependable events that have started in the past
yet are still ongoing or have very recently (at the moment of speaking or just before) come to a conclusion.
Like the Present Participle the Past Participle Form always applies a passive voice (was **being** hewed).
When one wishes to convey an active voice (has hewed), one would commonly use the imperfect, seeing the recent event is being vividly imagined.
When one wishes to stress dependability the perfect form could be used, entirely depending on the preference of the speaker.
Unlike the Present Participle Form this form is conjugated, using the endings and root vowel (a/u/e) seen in the Perfect Form.

The Past Participle is always formed as: "**maCvCC+...**" (**v**, being either **a, u** or **e** as seen in the Perfect Form)

Examples:

makeltmi	*I was being heard (recently)*
makeltsu	*you (m) were being heard (recently)*
makeltsi	*you (f) were being heard (recently)*
makelta	*he was being heard (recently)*
makeltai	*she was being heard (recently)*
makeltmâ	*we were being heard (recently)*
makeltsun	*you (m) were being heard (recently)*
makeltsin	*you (f) were being heard (recently)*
makeltôn	*they (m) were being heard (recently)*
makeltên	*they (f) being heard (recently)*

Particularities of the Past Particle Form:

1) Loss of "y" and "w" as third radical:
In case the third radical of a tri-radical root is "y" or "w" the radical will be ommited in the Past Particle Form.

Examples: *KhRY = ma **kh** u **ry** mi => makhurmi (I was being released)*
*HLW = ma **h** u **lw** a => mahula (it was being sweetened)*

2) Removal of trigemination:
Trigemination (three identical letters in a row) is not allowed in Khuzdul phonotactics, hence is reduced to standard gemination (two identical letters in a row).

Example: *DMM = ma **d** a **mm+m** i => madammi (I was being commited)*
*NSS = ma **n** a **ss+su** => manassu (you (m) were being saved)*

Passive Participle

The passive particle is called ***'udmêgalabi*** , meaning "greatest accompaniment word", a reference to the multi-functional nature of the passive participle in Neo-Khuzdul.
As, depending on the structure used, the passive participle form can be used as either a verb-structure, adjective or noun.

Examples:
"Manakdul" (Passive Participle), meaning: "That which is worn"

Passive Participle as Passive Participle or Adjective
Neked manakdul.
"The fabric was/is worn." OR "The worn fabric" (Exact translation may vary depending on further context).
Rule: Noun + Passive Participle = Passive Participle is used as either Passive Participle or Adjective
Note: In situations where one wishes to use a participle form it is much more common to use either a past or present participle instead of a passive participle.
The same sentence using past and present participles: "Neked mankad" - "the fabric is being worn (now)" / "Neked manekda" - "the fabric has been worn"
More information about past and present participles can be found in DOC 2: The Verb

Passive Participle as Noun
Mabkimi manakdul.
"We buy/bought that which is worn. "
Rule: Conjugated Verb + Passive Participle = Passive Participle becomes Noun

Passive Participle as Adjective
Mabkimi neked manakdul.
"We buy/bought the worn fabric."
Rule: Conjugated Verb + Noun + Passive Participle = Passive Participle becomes Adjective

When a passive participle is used as adjective it is subject to inflection based on the noun it is modifying.

Examples:
"Makargul" (neutral (objective) passive participle form), meaning: "That which is honored"
Afhani kadas makargul
I study the **honored manuscript**
The noun in question is neither male nor female, hence uses the neutral (objective) form.

"Makargûn" (singular mas. defined passive participle form), meaning: "He that is honored"
Afhani khuzd makargûn
I study the **honored dwarf** (m)
The noun in question is singular; hence the singular passive participle must be used.
Yet it can be either male or female, by using the singular masculine form we provide further information about the noun, indicating the dwarf in question is male.

"Makargûna" (singular fem. defined passive participle form), meaning: "She that is honored"
Afhani khuzd makargûna
I study the **honored dwarf** (f)
The noun in question is singular; hence the singular passive participle must be used.
Yet it can be either male or female, by using the singular feminine form we provide further information about the noun, indicating the dwarf in question is female.

"Makargân" (plural mas. defined passive participle form), meaning: "They (m) that are honored"
Afhani khazâd makargân
I study the **honored** **dwarves** (m)
The noun in question is plural; hence the plural passive participle must be used.
Yet it can be either male or female, by using the male form we provide further information about the noun, indicating the dwarves in question are males.
Even if one of the dwarves would be male and the rest female, it will use the male form.

"Makargâna" (plural fem. defined passive participle form), meaning: "They (f) that are honored"
Afhani khazâd makargâna
I study the **honored** **dwarves** (f)
The noun in question is plural; hence the plural passive participle must be used.
Yet it can be either male or female, by using the female form we provide further information about the noun, indicating ALL dwarves in question are females.

DOC: 57 - Diminutive

Neo-Khuzdul has two diminutive forms; the age diminutive and the intimite diminutive.

Age Diminutive

The age diminutive is a form used with objects, concepts or living beings that have recently been created, recently have come to exist or newly have been imagined.
It can also be used to highlight the freshness or young age of an object, product, animal or person.
As such it is also the common form used describe the young of animals, newly forged weapons or tools or even fresh market products .

For three radicals words, like "BNT" ("cat"), the pattern is "**1a23ith**" ("bantith" - "kitten, young cat").
While words that have two radicals, like "DG" ("fish"), the pattern is :"**1a2ith**" ("dagith" - "fingerling, fry, young fish")

Some more examples of the age diminutive:
tabl (apple) => tablith (fresh apple, could also be used to describe an unripe apple)
zagr (sword) => zagrith (newly forged sword)
mugr (bear) => magrith (bear cub)

Intimate Diminutive

The intimate diminutive is a form used in Neo-Khuzdul mainly to convey a sense of intimacy or endearment, or to indicate something of (much) smaller size.

For three radicals words, like "KRK" ("raven"), the pattern is a reduplication of the last two radicals, more specifically in the pattern: "**1u23a2u3**" ("kurkaruk" - "tiny raven").

While words that have two radicals, like "DG" ("fish"), the pattern is a reduplication of both radicals, more specifically in the pattern: "**1u2a1u2**" ("dugadug" - "tiny fish")

This pattern is inspired by Hebrew, which (among a few other methods) also employs a reduplication pattern (of its last syllable) to mark the diminutive form.
Some examples From Hebrew, compared to Neo-Khuzdul

Hebrew:
kélev (dog) : klavláv (doggie)
khatúl (cat) : khataltúl (kitty)
dag (fish) : dagíg (small fish)

Neo-Khuzdul:
kunb (dog) : kunbanub (tiny dog, doggie)
bunt (cat) : buntanut (tiny cat, kitty)
daig (fish) : dugadug (tiny fish, fishie) - *here you can clearly see where I got the radicals for the word "fish", it's a near copy of Hebrew.*

Plurals of Age and Intimate Diminutives

Like the age diminutive the intimate diminutive has both a singular and plural form.
In both diminutive versions the plural is formed by extending the last vowel of the singular form (age: "ith" becomes "îth" /intimate: final "u" becomes "û")

DOC: 58 - Intensive

An intensive word form is one which denotes stronger, more forceful, or more concentrated action relative to the root on which the intensive is built.
A common example in English is "the heck"; as in "What the heck is going on here?" "The heck" can be left out of the sentence without changing the meaning; however, the sentence is less intense without it.
There are several varieties that are an equivalent to "the heck", that are generally considered vulgar or otherwise inappropriate in a polite conversation.
In modern English "the hell" or "the fuck" are common varieties, while in the mid-19th century, "in tarnation" was in common usage.
In Great Britain, "bloody well" is an intensive adverb in common usage; as in "I will bloody well do it."

In Neo-Khuzdul the intensive form can be formed either by using the accompanying adverb "haga", the energetic form (similar to "Form II" in Classical Arabic, or "pi`el" (intensive form) in Hebrew), or more colloquial alternatives.
Intensive constructions can apply to nouns and adjectives, but most frequently to verbs and adverbs.

1) Haga
"Haga" is a common adverb meaning "very", "very much" or "too". It is frequently used in combination with the imperfect form to indicate an intensive.
It is considered the standard and polite form that is used to form the intensive.
Example:
Standard form: Kud jalatanakhi? (Literally: "What is happening?" / Meaning: "What's going on?")
Intensive form: Kud haga jalatanakhi? (Literally: "What is happening very much?" / Meaning: "What the heck is going on?")

2) Energetic Forms
Though the energetic form is commonly used to indicate an ongoing excessive action, it can be used to express an intensive.
It is important to note that when one wishes to convey an intensive form, one will audibly stress the doubled consonant of the energetic form.
Using the energetic form to express an intensive may be considered slightly formal and even archaic (compared to the common "haga"), yet it is still an acceptable form.
Example:
Standard form: Kuf tagliya? (Literally: "Why does she shout?" / Meaning: "Why is she shouting?")
Standard Energetic form: Kuf tagalliya? (Literally: "Why does she continue to shout / shout excessively?" / Meaning: "Why is she shouting so excessively?")
Intensive form: Kuf tagal**l**iya? (Literally: "Why does she continue to shout / shout excessively?" / Meaning: "Why the heck is she shouting?")

3) colloquial / vulgar alternatives
A) "bir ... bir"
In everyday colloquial speech the adjective "bir" ("clear") is frequently used as an intensive adverb.
This is done by duplicating the adjective and placing it before and after the verb form.
Though not considered vulgar, it is often associated with the Eastern Clans (where its usage is common) and therefore does not carry 'mainstream prestige' in the west.
Example:
Standard form: Kuf tagliya? (Literally: "Why does she shout?" / Meaning: "Why is she shouting?")
Intensive form using "bir": Kuf bir tagliya bir? (Literally: "Why clear she shouts clear?" / Meaning: "Why the heck is she shouting?")

B) "KKhF"
A rather rude alternative intensive is the adjective "kikhif" or irregular adverb "kakhfi"
The literal meaning is "in the shape of fecal matter (excrement)"
It is used to express: "worthless, "offensive", "detestable" or "damned"
Considered very vulgar, it is often expressed in anger. It should NOT be used in everyday conversation.
Example:
Standard form: Kud zagr bingald (Literally/Meaning: "What a worthless sword")
Intensive form using "KKhF": Kud zagr kikhif (Literally: "What a shit-shaped sword" / Meaning: "What a shitty sword")
Standard form: Banathahu! (Literally/Meaning: "He swore it!")
Intensive form using "KKhF": Banathahu kakhfi! (Literally: "He swore it shit-shaped!" / Meaning: "He fucking swore it!")

Khuzdul is the language of the Dwarves in J.R.R. Tolkien's legendarium set in Middle-earth.
For these Neo-khuzdul documents both the original Tolkien material, David Salo's Neo-Khuzdul and Khuzdul used in Turbine's LoTRO have been used.
This is my personal interpretation of Tolkien's dwarvish language, I do not claim this content to be canon.

Any reference to The Lord of the Rings Online or any other brand name is not meant to claim ownership of material.

DOC: 59 -Gender Neutrality

Sadly the short translations of gender neutral pronouns to English (that are listed in the dictionaries) are not always entirely authoritative.
Meaning that, depending on the context, interpretation of meaning, grammatical tense or mood we can see exceptions or different interpretations.

a) "someone or something that is grammatically gender-less"

In Neo-Khuzdul these words would perhaps be better described as "gender-free" or "epicene" as they lack any gender assignment and serve both as masculine and feminine.
This classification would be true for the vast majority of Neo-Khuzdul nouns.
And seeing I have found no indisputable evidence of professor Tolkien adding any consistent gender assignment to Khuzdul nouns, I have always attempted to stay clear of assigning gender to any noun.
Though linguist David Salo did list a few nouns that explicitly have a gender assignment - for instance: "anthân" - (meaning "sign(s), omen(s)") is a feminine noun,
no doubt inspired by gender assignment seen in other Semitic languages -
I have deliberately NOT included this in my version of Neo-Khuzdul (hence you won't find it in the dictionaries)
As I believe it would make an already robust (and for the novice already complex) system overly complex with no distinct benefit to clarity or comprehensibility - nor would it mirror Tolkien's original Khuzdul.
So, with the above in mind, what pronoun would we use with such "epicene nouns"?

In the majority of cases one would use the 3rd Person male/neutral "**HU**".

Example:

"The fabric's colour is red. Red is its colour"
"Neked ankhâd**hu** baraz. Baraz ankhâd**hu**"

If something or someone is not explicitly female (the vast majority of objects and concepts in Neo-Khuzdul) and you can easily replace it by "it" in English you'll be sticking with this form nearly all the time.

b) "either male or female (his/her)"

What if you are in a situation where you could address an object as either belonging to a male or female.
In English we often use the "his/her" marker, especially in formal or official circumstances, like contracts or disclaimers.

Example:

"A trader must polish his/her items"
"Usjar tabtisi mat fakât**khi**.

"Khi" (translated roughly as "one" or "one's") is the form to use here. It is the form we'll use if we wish to stress something is either male or female, or can belong to either.

The issue with the translation of "khi" as "one('s)" is that in English it has quite formal connotations (particularly in American English).
Native English speakers often avoid it in favor of more colloquial alternatives such as the generic "you(r)".
When translating to or from Neo-Khuzdul one should forget the formal connotation associated with the pronoun "one" in English, as this is not present in Neo-Khuzdul.
Try to think of it as "his/her" or "person's" if the translation as "one('s)" keeps feeling to formal for you.

Note however that when “**khi**” is associated with verbs, these are conjugated like the third person male/neutral, as we can see in the above example as well.
Though the noun “usjar” (”trader”) is considered gender-free it uses “tabtisi” (”he/it polishes”) and not “tabtisiya” (”she polishes”).

c) “someone or something of unknown gender”.

Example:

Let’s say we went for a walk, tripped, fell and are now hopelessly trapped in a pit, hoping a dwarf may pass by with a rope to save us.
We obviously don’t know if that dwarf-saviour would be a male or female. So, we have no way of knowing if it would be “his” or “her” rope (assuming our hero/heroine would carry a rope).

“The saviour’s rope.”
“Unsas jezer**khi**.”

Identical to b) we are going to use “**khi**”. The exact same logic applies here.

- Singular and Plural

The above examples specifically address singular forms, for plural “khi” can be replaced by “maku” (which translated literally as “anyone/them”),
though would only be used if one were to stress the fact that there are multiple people involved.
A full list of all forms for "khi" and "maku" can be found in the document on pronouns.

- 2nd Person ("za")

The above forms (khi and maku) are of course 3rd person forms, the "za" form is its non-binary equivalent in the 2nd person.

Examples.
Singular - Nominative (you non-binary) = za
Singular - Accusative (you non-binary) = za
Singular - Genitive Determiner (your non-binary) = -za
Singular - Genitive Pronoun (your non-binary) = aza
Singular - Reflexive (yourself non-binary) = zefsa
Singular - Lative (to you non-binary) = duza (also used as “you have”)

"Za", takes similar forms to "zu" or "zi" in plural, formal or disrespectful (Examples: -z**a**n, astn**a**, mên**a**, …)

Khuzdul is the language of the Dwarves in J.R.R. Tolkien's legendarium set in Middle-earth.
For these Neo-khuzdul documents both the original Tolkien material, David Salo's Neo-Khuzdul and Khuzdul used in Turbine's LoTRO have been used.
This is my personal interpretation of Tolkien's dwarvish language, I do not claim this content to be canon.
This document is an interpretation of Tolkien's work and any Khuzdul related material, all rights are reserved for their proper owners.
Any reference to The Lord of the Rings Online or any other brand name is not meant to claim ownership of material.

DOC: 61 - Relative Clauses

General information:

In English and Neo-Khuzdul we use relative clauses to give additional information about something without starting another sentence.
By combining sentences with a relative clause, your text becomes more fluent and you can avoid repeating certain words.
Relative clauses contain essential information

Example:
Without relative clause: *You are sitting on the chair. The chair is broken.*
With relative clause: *You are sitting on the chair, WHICH is broken*

Relative clauses in English can be introduced by the words that, which, whose, who, or whom.

In ancient Khuzdul, relative clauses used the word "khama" (literally "because", "also", or "with").
In later times (by the end of the second age), especially in the west, "khama" became interchangeable with "tada" ("that"),
and in present day Khuzdul, the use of "tada" is much more common than "khama", except in some formal, archaic, or poetic writing.
In meaning as a relative clause, the two are interchangeable.

Broad Usage of the Relative Clause

Khuzdul will sometimes use a relative clause, where English doesn't.

Examples:
Without relative clause:
English Meaning: *The chair is next to you. The chair is broken.*
Neo-Khuzdul: 'Egam durathkhzu. 'Egam makarfûn.
Literally: (the) chair (is) to-hand-your. (the) chair it-that-is-broken.

With relative clause:
English Meaning: *The chair next to you is broken.*
Neo-Khuzdul: 'Egam tada durathkhzu makarfûn.
Literally: (the) chair that (is) to-hand-your it-that-is-broken.

Repeated Pronouns in the Relative Clause

Another difference with English is that in Khuzdul (like in Hebrew and Arabic) pronouns are repeated in the relative clause.

Examples:
English Meaning: ***He** , whom I saw in battle.*
Neo-Khuzdul: **Hu** tada sakhmi**hu** ni 'uzghu.
Literally: **He** that saw-I-**him** in battle.

Even when the pronoun is replaced by a noun, the same construction remains:

Examples:
English Meaning: *The elf whom I saw in battle.*
Neo-Khuzdul: Fund tada sakhmi**hu** ni 'uzghu.
Literally: (the) elf that saw-I-**him** in battle.

The benefit of this construction is that in Neo-Khuzdul you will be aware of the gender of the subject, while in English you will not be.

Omitting the repeated pronoun in the relative clause

In colloquial Khuzdul, and among dwarves of the Blue Mountains specifically, the repeated pronoun in the relative clause (as seen above) is usually omitted.

Examples:
Fund tada sakhmi ni 'uzghu. *Compared to* : Fund tada sakhmi**hu** ni 'uzghu.

This form however is considered very informal by the non-western clans and may even be considered rude to those in the east.
Thus, in most case it is preferable to retain the repeated pronoun rather than remove it.

DOC: 62 - Measure Words, Numeral Classifiers and Collective Nouns (Enclosed Form)

GENERAL INFORMATION

Measure words are words that are used in combination with a numeral to indicate an amount of something represented by some noun.
They denote a unit or measurement and are used with mass nouns (uncountable nouns) or count nouns.
For instance, in English, mud is a mass noun and thus one cannot say "three muds", but one can say "three drops of mud", "three pails of mud", etc.
In these examples, drops and pails function as measure words. One can also say "three pails of shells"; in this case the measure word “pails” accompanies a count noun (shells).
Like in English, most measure words in Neo-Khuzdul correspond to units of measurement or containers, and are themselves count nouns:

English example:
• three ***cups of*** coffee
Neo-Khuzdul example:
• ***Sheluk*** gem kafh (literally: “***cups of*** three coffee”, meaning: “three ***cups of*** coffee” (in Neo-Khuzdul numbers are nearly always treated as adjectives, placing them after the noun in question).

USAGE OF THE CONSTRUCT FORM

Neo-Khuzdul has explicit “construct”-forms (“x-of”, for instance: “cup of” – “shelaku” / “cups of” – “sheluk”), which measure words will always use.
This is convenient for English-speakers as it provides the same meaning as in English (unlike other languages like German where the “of” does not exist in such constructions
(example, German: “ein Glas Bier” / English: “a glass of beer”).

COLLECTIVE NOUNS (enclosed-form)

Unlike English, Neo-Khuzdul does not have a large collection of collective nouns (herd, swarm, flock, troop, mob, bunch, etc...) but has seven very specific collective nouns depending on the nature of the word.
These collective nouns all use the “enclosed form” (“**-ur**”), literally meaning “**containing x...** “.

A) “**Kak’ur**”- collective noun for living creatures (peoples or animals)* that form a collective of hundreds or thousands (English equivalent “army of ants”, “mob of protestors”, “swarm of insects”, “colony of bats”).
Literal translation: “containing FORCE (military strength)”.
*Example: "imzêrtunz **kak'ur** " (literally: "ants **containing force** ", meaning: "army of ants" / "large group of ants")*

B) “**Thahrur**”- collective noun for living creatures (peoples or animals)* that form a collective of at least twelve, but less than a hundred (English equivalent “troop of apes”, “sounder of boars”).
Literal translation: “containing MUSTER/GROUP”.
*Example: "galât **thahrur** " (literally: "boars **containing group** ", meaning: "sounder of boars" / "group of boars")*

C) “**Bahur**”- collective noun for living creatures (peoples or animals)* that form a collective of at least three, but less than twelve
(English equivalent “a scurry of squirrels”, “a glaring of cats”, “a band of musicians” or “a litter of pups”
– though this would not explicitly be limited to twelve in English, nor would be it usually be used for as little as three). Literal translation: “containing COMPANY/FRIEND/AMITY”.
*Example: "banât **bahur** " (literally: "stars **containing company** ", meaning: "glaring of cats" / "group of cats")*

D) “**Damyur**”- collective noun for things, objects (anything that does not live)*, instruments or tools that form a collective of hundreds or thousands (English equivalent “library of books”, “galaxy of stars”).
Literal translation: “containing ACCOMPANIMENT”.
*Example: "thathûr **damyur** " (literally: "stars **containing accompaniment** ", meaning: "galaxy of stars"/ "large group of stars")*

E) “**Faktur**”- collective noun for things, instruments, tools or objects (cards, books, keys, etc..) that form a collective of at least three, but less than a hundred (English equivalent: “a pack of cards”, “a bunch of keys”).

Literal translation: “containing PACK”.
*Example: "hedân **faktur** " (literally: "keys **containing pack** ", meaning: "bunch of keys")*

F) “**Gabrur**”- collective noun for liquid containers (tankards, cups, barrels, etc..) that form a collective of at least three (no direct English equivalent). Literal translation: “containing LIQUID”.
*Example: "haddar **gabrur** " (literally: "barrels **containing liquid** ", meaning: "several barrels, a collection of barrels")*
*Example: " **haddur** zull **gabrur** " (literally: " **barrels of** ale **containing liquid** ", meaning: "several (more than three) **barrels of** ale, a collection of ale barrels")*

G) “**Karur**”- collective noun for containers of dry goods (boxes, bags, sacks, etc..) that form a collective of at least three (no direct English equivalent). Literal translation: “containing STORE/INVENTORY”.
*Example: "zêsh **karur** " (literally: "bags **containing store/inventory** ", meaning: "several bags, a collection of bags")*
*Example: " **zush** mesêm **karur** " (literally: " **bags of** jewels **containing store/inventory** ", meaning: "several (more than three) **bags of** jewels, a collection of jewel bags")*

** though plants and trees live, these are not counted in the groups A, B, C and either use D or E.*

These seven collective nouns above are always treated as if they were an adjective (which is always the case with the “enclosed form”, telling more about the noun in question.
Example: “I bought lots of (more than three, a bunch) boxes” would be translated literally as “I bought boxes containing store/inventory” (“Bakammi hadâr karur”).
The collective noun used here “karur” (see above) is placed after the noun “hadâr” (boxes), identical to the noun-adjective word order.

Though Neo-Khuzdul has plenty more enclosed-form words, these are NOT used as collective nouns, but are used as simple adjectives, indicating the content of a word.

For example:
• “Hadâr **hassur**” – literally: “boxes **containing meat** (meat-containing boxes)”
• “’Abbad **lâzur**” – literally: “mountains **containing coal** (coal-rich mountains)”
• “Manûl **shathrur**” – literally: “skies **containing clouds** (cloudy skies)”

ENCLOSED FORM vs PROPER ADJECTIVE

Though in many cases an identical adjective will exists - for instance the adjective “cloudy” also exists as “shatharul” - there is a subtle difference in meaning between the two forms.
• Manûl **shathrur**: – literally: “skies **containing clouds** (cloudy skies)” – used to indicate/stress the skies CONTAIN clouds. Clouds are a feature of the skies.
• Manûl **shatharul**: – literally: “skies **cloudy** (cloudy skies)” – used to indicate the skies ARE cloudy. Clouds are defining element of the skies.

As one would expect both forms are interchangeable, yet depending on the meaning one wishes to convey one would be preferred over the other.
• Enclosed form (-ur): used to indicate the contents or characteristic feature of something/someone
• Proper adjective: used to indicate the fashion or defining element of something/someone.

DOC: 63 - Cognitive metaphors

GENERAL INFORMATION

Cognitive metaphors, refer to the understanding of one idea, or concept, in terms of another.
These are usually very language specific and are things that should rarely be translated litterally.
Examples of cognitive metaphors in English are "the price is rising", "making peace" or "he ran out of time".
Obviously, in the above examples, the price is not litterally rising to the skies, no one is "crafting" peace, nor is there any actual "running" going on when he runs out of time.
These are all specific metaphors which English speakers generally take for granted, but are translated quit differently in different languages.
Below is a list of typical cognitive metaphors in English and how these are translated in Neo-Khuzdul.
As you will see, what in English is congnitive metaphor may very well not be one in Neo-Khuzdul and vice-versa.
Furthermore, if both languages use a cognitive metaphor to express the same concept you will see it is extremely rare the literal translation will be the same.

English	underlined metaphors translated to Neo-Khuzdul	Neo-Khuzdul literal translation of underlined metaphors (identical/different)
		"too wet" (different from English)
Your claims are indefensible.	***"ushulkai"***	
He attacked every weak point in my argument.	***"takrifi khaddar"***	"broke the walls" (different from English)
His criticisms were right on target.	***"farkh kusut"***	"a true weight" (different from English - Neo-Khuzdul idiom)
I've never won an argument with him.	***"jalâzrali"***	"claimed" (different from English)
If you use that strategy, he'll wipe you out.	***"zatadrafizu" / "zatadrafi astû"***	"will kill you" (different from English)
You're wasting my time.	***"safbili"***	"wasting" (identical to English)
That new tool will save you hours.	***"zabiratazkafiyazu" / "zabiratazkafiya astû"***	"will gain" (different from English)
How do you spend your time these days?	***"sakhjamruki"***	"pass" (different from English)
Packing the pony cost me an hour.	***"jalatablagi"***	"devowered"/"swallowed whole" (different from English)
He's without direction in life.	***"binnâla tur kuylhu"***	"pathless through his life" (different from English)
I'm at a crossroads in my life.	***"aya ibdakh-tharkh"***	"on a crossroad" (singular - nearly identical to English)
She's gone through a lot in life.	***"tathakiya 'abbad êthârul"***	"has mined many mountains" (different from English - Neo-Khuzdul idiom)
He's gone (= died).	***"tamradi"***	"died" (not a metaphor in Neo-Khuzdul / though several idioms exist)
He is very much in love with her	***"ni amrâl aya"***	"in love on" (nearly identical to English, though other idioms exist also)

DOC: 64 - Typology

GENERAL INFORMATION

Linguistic typology is a field of linguistics that studies and classifies languages according to their structural and functional features.
Its aim is to describe and explain the common properties and the structural diversity of the world's languages.

Synthetic

According to linguistic typology, Neo-Khuzdul would be considered a (very) synthetic language.
This means that it is language with a high morpheme-per-word ratio (synthetic language), as opposed to a low morpheme-per-word ratio (analytic language).
A morpheme is the smallest grammatical unit in a language.
For instance, the word "unbreakable" consists of three morphemes: un- (signifying "not"), -break- (the root), and -able (signifying "can be done").
Neo-Khuzdul has a (very) high morpheme-per-word ratio, making it a (very) synthetic language.
Example:
The English sentence: "He will kill you" (using 4 words to convey 4 morphemes) is translated into Neo-Khuzdul as: "zatadrafizu"
In which 1 words contains 3 morphemes ["za-": "will", "tadrafi": "he kills", "-zu": "you" (male form)]
While English is clearly a more analytic language, Neo-Khuzdul can no doubt be considered a synthetic language.

Fusional

Further more, typologically, Neo-Khuzdul can be considered to be a fusional language.
Fusional languages are a type of synthetic languages that have a tendency to use a single morpheme to indicate multiple grammatical elements.
Using the above example again, "he writes" can be expressed in the imperfect form as "tazrabi", a word formed by adding "ta-" and "-i" to the verb base "zrab", that indicate such specific meaning.

DOC: 65 - Formulae, Fixed and Fossilized Phrases

General Information

Every language has set expressions, ways of formulating concepts and ideas that do not change structurally.
Often such set expressions are idioms or sayings, but at times these are fixed phrases, formulaes or fossilezed phrases.
Such phrases should (almost) NEVER be translated literally.

Fixed phrases

A fixed phrase is a phrase of which few if any variants are acceptable (fixed - not subject to variation - also called "set expressions")
In some phrases no change either of an individual word or of the word order is likely.

Examples of fixed phrases in English are:	**Similar examples of fixed phrases in Neo-Khuzdul are:**
Knife and fork (vs fork and knife)	*Mi akan yan [literal translation: by agreement double / meaning: by mutual consent]*
pay attention to (vs pay attention towards/for/at)	*Arnuk ibzurul* aya [literal translation: thinking deeply on / meaning: with due regard of]*
heir apparent (vs apparent heir)	*zamahtagnani ihdunul* [literal translation: shall begin securely / meaning: shall enter into force]*
from bad to worse (vs from good to better)	*tajbilabi magajjul [literal translation: agreed that which is followed / meaning: have agreed as follows]*
beneath contempts (vs below/under/underneath contempt)	*medekhika d'asukh r'aglub islumul* ai-sullu [literal translation: set to see and speak fully on all / meaning: appointed to testify and record (all) testimonies]*
no good, no different (vs no bad, no similar)	*mahahbari aya [literal translation: (I) make attention on/ meaning: (I) pay attention to]*
for the time being (vs for the time that is)	*ina akhad tada tâti [literal translation: during the present that (it) is / meaning: for the time being]*
to and fro (vs to and from)	*duyumul r'annâk [literal translation: toward there and return / meaning: to and fro]*

Khuzdul employs a rather large amount of fixed phrases for contracts, laws and written agreements - a small number of them seen above.
**Note the usage of the archaic adverb form ("islumul", "ihdunul", "ibzurul") for such legal documents, instead of the contemporary adverb form ("silmal", "hidnal", "bizral")*
Considering the very nature of contracts or legal documents, the PERFECT form (used for dependable facts) is very actively used in such writings.

Formulae

Formulae are an instance of stereotyped language that usually allow few or no changes in form, and may not conform to current grammatical usage.

Common formulae in English include:	**Similar common formulae in Neo-Khuzdul include:**
thank you!	*razu? ["and you?"]*
how do you do?	*zabirasakhjami. ["please" (asking for person to do something - formal / literally: "will you grant ?"]*
see you!	*ibtusul! [nice! (well done!) / literally: archaic adverb form of "smoothly"]*
no way!	
you don't say!	
many happy returns!	
yours sincerely	

Fossilized Phrases

Many of the above examples can be consider "fossilized phrases".
A phossilized phrase has a structure that is no longer productive.

Examples in English are:	**Similar examples in Neo-Khuzdul are:**
Handsome is as handsome does (vs good is as good acts)	*gibashel [archaic form of "treasure of all treasures", derived from the Blue Mountain Khuzdul "ghivashel"]*
Come what may (vs occurs what will)	
long may it last	
How come... ?	

Seeing that Khuzdul has changed very little over thousands of years (compared to the languages of men for instance) such formulae and fossilized phrases are rather rare compared to what is noticed in other languages.
